Dear SD Board of CPM,

RE: Medications for allergic reactions from medications

Use of epinephrine:

The ability for a health care provider to carry and to administer drugs of antibiotics, anti-hemorrhagic, or in the care for the newborn implies that they are also able to carry and administer the antidote in case of an allergic reaction to the above mentioned drugs. Therefore, I am in full support of adding epinephrine to the CPM's legend drugs for public safety and their confidence of the licensed providers serving the people of South Dakota.

I support the inclusion of TXA to the CPMs legend drugs to improve outcomes enhancing the public safety through its use in an emergency out of hospital situation.

Many blessings,

Eudine Stevens
