Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary Paragraph

The Bluff View Cemetery Mausoleum District is within the Bluff View Cemetery located at 599 Pinehurst Avenue in Vermillion, South Dakota. It is a small historic district consisting of four private family mausoleums built into the hillside along the south edge of the cemetery. They overlook the wide river valley below the bluff near the confluence of the Vermillion and the Missouri Rivers. The district is located between the southernmost cemetery road, along the north edge of the district, and the fence line along the edge of the bluff on the south (the road and the fence are outside of the district); the east and west boundaries begin at the points where the pathway through the district intersects with the cemetery road (north boundary), each boundary dropping south to the fence line (south boundary). Because the boundary is irregular in shape, it is best explained by the outline (in red) on the aerial view on page 33 of this document.

All four of the mausoleums are considered contributing resources in the district, and the surrounding landscape is a contributing site. Two non-contributing objects are also located within the district boundaries, a bench and a gravestone that are not related to the architectural significance of the mausoleums and were added after the period of significance.

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

The period of significance begins in 1897, with the construction of the first mausoleum, and ends in 1965, with the completion of the fourth mausoleum. The district is considered significant at a state level, being an unusual grouping of private family mausoleums and a fine example of mausoleum architecture over multiple decades.

Narrative Description

LOCATION AND SETTING

The Bluff View Cemetery Mausoleum District is located at the south edge of the Bluff View Cemetery in Vermillion, SD. The mausoleums are situated on the hillside below the southernmost roadway through the cemetery at the top edge of the bluff overlooking the wide river valley below, where the Vermillion River meets the Missouri River. Only the upper portions of the mausoleum walls and roofs are visible from the cemetery road; the front entrances are accessed via a pathway from that road down the hillside at the west and east ends of the grouping of mausoleums. The vaults of the structures are buried in the hillside. The mausoleums face south and are placed in a linear alignment with a uniform setback from the pathway. The easternmost structure, which includes the largest of the underground vaults, is separated slightly from the other three, which sit closer together with exterior walls abutting one another.

The area surrounding the structures includes the grassy hillside into which they are built, the pathway along the fronts of the structures, and the fence just south of the pathway, which marks the south boundary of the cemetery. The area outside of the fence has become overgrown with trees and shrubs along the bluff, blocking much of the view from the mausoleums to the valley below. Plantings placed along the fronts of the structures include shrubbery and yucca plants. A concrete sidewalk spans the area in front of the easternmost structure, as well as the area immediately adjacent to its entrance. A curvilinear, brick retaining wall and a concrete bench are located in front of the Brookman #1 Mausoleum.

GENERAL CHARACTERISTICS

Each of the mausoleums are single-story, masonry (stone or brick, with concrete) structures. The vault portion of each is built into the hillside, while the front facades, portions of the side walls, and the roofs project from the hillside. The roofs are visible from the cemetery road to the north, but the fronts of the structures are visible only from the pathway from that road along the south edge of the district.

The entryways are centered in the front facades. The stone and metal doors are substantial, and all have been padlocked to deter vandals, three of them with metal gates. There are no windows and only small ventilation openings exist in the stone and brick walls.

The oldest and largest of the mausoleums is located at the east end of the grouping. Due to its size, it is set apart slightly from the nearest structure. The three structures west of the oldest one have partial exterior walls along the hillside that abut one another. The mausoleum on the west end of the grouping is the most recent.

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

There is a cohesiveness to the district with a uniform setback of the front facades, the similar size and scale of the structures, the use of masonry materials, and simple landscape features. The district is set apart from the main sections of the cemetery, which creates a quiet little neighborhood for a final resting spot for the families associated with the mausoleums.

LEWIS-THOMPSON MAUSOLEUM

Block 5 Lot 989

Contributing

This mausoleum, constructed in 1897, is located at the east end of the row of mausoleums. It was the first to be constructed and is the largest of the four mausoleums, with a total of twenty-two (22) known interments. The vault portion of the mausoleum is below ground, stretching east and west from the main entrance (although not visible, it is reportedly constructed of concrete). The visible portion of the structure includes the front façade with entryway, portions of the lower side walls, and the upper portion of the structure which extends above the sloping edge of the hillside.

The exterior walls consist of large, rusticated blocks of a purplish/gray colored Sioux quartzite, a stone likely quarried near Sioux Falls. The blocks are set in a running bond with a thin bead mortar joint. The foundation is concrete and stone. The roof consists of a row of large, rough-cut blocks of quartzite; the center block is thicker than the two blocks flanking it and it has a smaller flat ridge stone sitting on top of it, which gives the overall appearance of a “stepped” roof shape.

Stylistically, this mausoleum has Classical elements including two, polished stone Tuscan columns, sitting on simple stone plinths, with unadorned capitals that support the lintel stones of the recessed entryway. A pediment, constructed with several pieces of carved stone molding, is located over the entryway. This feature extends to the corners of the structure and wraps around the east and west corners as eave returns. The date “1897” is carved into the tympanum surface within the pediment. At the top edge of the wall, directly beneath the stones of the roof structure, is a simple, carved stone cornice tucked into the overhang of the roof stones.

The recessed entry includes a polished stone door centered in the entryway. A metal gate, locked to deter vandals, secures the doorway (not original to the structure, but added during the period of significance). On each side of the door is a polished stone nameplate into which the names of those interred in the vault are carved. The lowest course of the east and west walls projects southward from the entry walls with stones that are slightly larger than the wall stones. Topped with a thinner piece of stone, these projections create a space large enough to set something on or use as a small bench. Directly below these projections are smaller pieces of the same stone along the ground, cut with slight curves, to create a curbing that curves outward from the structure toward a sidewalk in front of the mausoleum. The area between the curbing, as well as the sidewalk, has been paved with concrete.

The design of the structure is attributed to Wallace L. Dow, a prominent South Dakota architect of the late 19th and early 20th century. It has several elements that characterize much of Dow’s architecture, including the use of heavy Sioux quartzite stone blocks. Dow had close affiliations with the family, having designed buildings housing family businesses (the Thompson & Lewis building on Main St. in 1889 and the First National Bank building in 1892), as well as the family’s church (First Baptist Church in 1889) and buildings at the University of South Dakota (University

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

Hall, Old Main, and East Hall), where Darwin Inman (married to Adele Lewis) was a staunch supporter of the university and served several terms on the Board of Trustees. An addition made to the Thompson House (Myron D. Thompson was married to Anna Elizabeth Lewis) in 1892, after it was moved from its original location to Main Street, was also likely designed by Dow. That addition consisted of a new first floor front elevation that included the application of heavy, rusticated pink Sioux quartzite and an entryway with a rounded arch similar to Dow's use of Richardsonian Romanesque architecture.¹ Descendants of the family recall being told that Dow was involved in the design of the mausoleum.

The primary landscape feature is the hillside that covers the vault of the mausoleum. It is mostly grass-covered. A number of yucca plants are growing along the curbing on the west side of the structure, with a few more on the hillside. The concrete sidewalk extends only in front of this structure, beyond it is a dirt and grass covered pathway, leading east up the hillside and west in front of the other mausoleums.

The mausoleum retains a very high degree of integrity and is in good condition. The only obvious alterations have been the addition of names on the stone plaques as additional family members have been interred in the structure.

This mausoleum is the final resting place for members of the Lewis and Thompson families. Information about them can be found in Section 8 of this document.

BROOKMAN #1 MAUSOLEUM

Block 5, Lot 988

Contributing

The next mausoleum in the grouping is located to the west of the first structure. It was constructed in c.1905. There are eleven (11) members of the Edgar D. and S. Edwin Brookman families interred here (information about these family members can be found in Section 8). Like the first mausoleum, the vault portion of the structure is located beneath the hillside and only the front portion of the structure that extends from the hillside and the upper portion with roof are visible.

This structure sits on a concrete foundation and is clad with a medium colored, smooth surface brick set in a traditional running bond with a concave, colored mortar joint. The roof is a front-facing gable capped with concrete slabs and topped with a ridge piece. A two-level wall, with the upper level stepped back from the lower level, extends from the west side of the main volume. It is also constructed of the same brick and capped with concrete coping and serves as both a wall of the underground vault area and a retaining wall for the hillside.

Another wall extends from the east side of the main volume; it is shorter and curves southward in a series of five steps, creating a semi-private terrace in front of the structure. This wall appears to have replaced an earlier wall on this side of the structure (the reason for replacement is unknown at this time). A photograph taken c.2008 show a taller, straight wall on this side of the structure. The newer wall closely matches the appearance of the original structure, but the bricks are a slightly different size and color than the originals. A concrete bench, sitting on a concrete slab on grade, has been added in front of this wall; the names "LaGrave" and "Mahoney" are carved into

¹ Known locally as "the Pink House," it was demolished in 2020.

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

the front edge of the bench. The exact dates of these alterations and additions are unknown, but it would have been between 2008 and 2017, according to available photographs from those years.

Stylistically, this mausoleum also has Classical elements, in a clean, stripped application. Pilasters are located at the corners of the gabled portion of the structure, each with simple capitals that include egg-and-dart molding that also extends across the front of the structure at the top of the wall surface. The entablature consists of a frieze made with two rows of smaller "rowlock" bricks and a cornice created with rows of bricks that extend to various degrees from the wall surface to create interest. The front surface of the gable end consists of bricks set in a running bond, as well as three rows of bricks laid at a diagonal to the running bond following the slope of the gable edge. At the junction of the slightly overhanging roof edge is additional egg-and-dart molding with a small strip of bead molding at the lower edge. The same configuration and moldings appear on the rear gable where it extends above the edge of the hillside.

The doorway is centered in the front façade. Double leaf metal doors and a metal gate (padlocked to deter vandals) are surrounded by a light gray stone framing, threshold, and lintel. The name "BROOKMAN" is carved into the lintel stone. A ventilation opening is set directly over the doorway and is made with clay tiles with a series of small vertical openings. Bronze plaques with the names of those interred in the mausoleum are located to the sides of the doorway.

Landscape features include the yucca plants on the hillside to the east and a large shrub in front of the wall that extends to the west. The pathway to the mausoleums passes south of the structure before connecting with the concrete sidewalk in front of the mausoleum to the east.

The structure retains a high degree of historic integrity and is in good condition. The primary alteration to the structure has been the replacement of the original east wall with the curved brick wall. Other alterations include the addition of names to the bronze plaques and the addition of the concrete bench.

HARRINGTON MAUSOLEUM

Block 5, Lot 987

Contributing

Immediately adjacent to the west of the Brookman #1 Mausoleum, is the Harrington Mausoleum. The exact date of construction is unknown. It did not yet exist when John H. Harrington, the family patriarch, died in 1895, as the newspaper death notice indicate he was buried in the Bloomingdale Cemetery. It had been constructed prior to April 1924 when his son Samuel died; according to his obituary, he was interred in the family vault at the Bluff View Cemetery. There are a total of eight known burials in this mausoleum, including John H. Harrington, who was apparently relocated to the vault at some point in time. Information on the family is included in Section 8.

This structure, like the others, is built into the hillside and the vault space is located underground and is reportedly constructed of concrete. The portion of the mausoleum that is visible is constructed of large blocks of white marble, set in a running bond pattern. It sits on a stone and concrete foundation. The front-facing gable roof is clad with slabs of marble topped with a long marble ridge cap. A low wall, also of large marble blocks, capped with thinner slabs of marble, extends west from the main volume serving as a partial exterior wall for the vault, as well as a

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

retaining wall for the hillside. The rear portion of the gabled roof extends above the hillside and is visible from the north side of the structure.

The mausoleum is quite austere in appearance. There is little ornamentation or attention to stylistic features. Directly beneath the slight overhang of the roof edge is a simple carved molding; the placement of the marble blocks at the lowest course of the gable project slightly from the plane of the wall below. The entryway is centered on the front of the structure, recessed into the marble door surrounds. The double leaf doors are also marble; the heads of the bolts attached to the interior door hinges are visible on the outside of the doors, creating a simple element of decoration. A large, circular metal disc (with a slight convex shape and a padlock) covers the hardware to open the doors. The name "HARRINGTON" is carved into the lintel piece over the doors. There are no plaques on the structure listing the names of those interred within.

Landscape features include the large shrub in front of the Brookman #1 vault wall, which also covers part of the Harrington vault, and a number of small shrubs along the base of the vault wall that extends to the west. The grassy hillside is above, and the pathway passes in front of the structure on the south.

The Harrington Mausoleum retains a very high degree of integrity and is generally in good condition. There are a few spots where there is cracking in the marble blocks and small points where pieces of mortar have fallen out of joints. The metal plate on the door shows signs of corrosion, as do the visible bolt heads.

BROOKMAN #2 MAUSOLEUM

Block 5, Lot 986

Contributing

The Brookman #2 Mausoleum is the most recent of the four structures. It was constructed in 1964-65. It abuts the Harrington Mausoleum, which is located to the east. There are only three family members interred in the vault at this time, but according to descendants, at least one other will be buried here, although there is room for more. Information on the family is included in Section 8.

The mausoleum is constructed of split-face marble blocks of various shades of gray, pink, and yellow. The width of the blocks is uniform, but the lengths vary, creating a running bond pattern that is somewhat irregular. On the front elevation, the taller center volume is flanked by shorter walls that extend to the east and west, each wall set back from the plane of the center volume. These walls serve as both exterior walls for the interior vault space set into the hillside and as retaining walls. The wall on the west end wraps around the edge of the hillside where it slopes from the upper road level along the pathway. The wall on the east abuts the short wall that extends from the Harrington Mausoleum. More of this mausoleum is exposed than the other three due to the slope of the hillside, showing a bigger expanse of the stone walls on the sides. On both the east and west walls, directly below the roof edge, are tiles providing ventilation for the vault. The front of the center portion extends into a parapet wall above the flat roof behind it. The upper edge of that parapet, as well as the top edges of the shorter walls, are topped with concrete coping. The foundation is concrete and stone; the roof is covered with concrete slabs.

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

Stylistically, the structure illustrates the clean, straight lines and limited ornamentation of mid-century modern architecture. The entry is center in the central volume. The door surround is the most decorative feature on the structure; it consists of two narrow, stone (also split-face marble) framing elements, parallel to each other, that project from the wall surface with a smooth stone surface between them. The name "BROOKMAN" is carved into this smooth stone in the space above the door. A double-leaf metal door is recessed slightly into the opening. A locked metal gate at the front of the opening covers these doors. A bronze plaque with the names of the family members interred in the vault has been attached to the gate since 2017.

Landscape features are limited to the grassy hillside into which the structure is built and the pathway that descends from the cemetery roads west of the structure to the area that passes in front of the mausoleums.

The structure retains a very high degree of historic integrity and is in excellent condition. Other than the addition of the name of the most recent family member interred in the vault, there have been no alterations since its construction.

MAUSOLEUM LANDSCAPE

Contributing

The landscape surrounding the group of mausoleums should be considered a contributing feature in the district. The grassy hillside is indeed part of the vaults but also adds to the visual ambiance of the district, which was designed with nature in mind, especially the emphasis on the vista of the river valley below the bluff. The pathway is also an important element of the site. Although used by vehicle traffic only on rare occasion when a hearse would need to deliver a casket for interment, the pathway is primarily pedestrian in nature. It is a quiet walkway along the fronts of the mausoleums, which helps to create cohesiveness of the district. With the exception of the short portion that has concrete paving in front of the Lewis-Thompson Mausoleum, it is a dirt and grass walkway near the south edge of the district and from there up the hillside, on the east and west ends, to the cemetery roadway above.

NON-CONTRIBUTING RESOURCES

There are two (2) non-contributing features in the small district. Both are in association with the Brookman #1 Mausoleum.

The first is the concrete bench located in front of the curved brick wall. The date of its addition is unknown, but it was added between 2008 and 2017, according to available photographs.

The second non-contributing feature is the grave that is located above the mausoleum near the cemetery road that serves as the north boundary of the district. It is the grave of Harold Brookman and his wife, Ruth, and is marked with a granite headstone with both of their names. It is the only in-ground grave marked with a typical headstone within the district boundary. It is unknown why Harold and Ruth chose this style of grave directly above the family vault rather than being interred in the family vault. This grave is outside the period of significance, as Harold died in 1967 and Ruth in 1971, and does not contribute to the architectural significance of the mausoleum group.

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

STATEMENT OF INTEGRITY

The Bluff View Cemetery Mausoleum District is an excellent example of funerary architecture in the form of an intentional group of four private mausoleums set together in an area separate from the rest of the cemetery. They exemplify the architecture of small family mausoleums constructed in the late 19th and early to mid-20th centuries in America. They are built of masonry and follow the stylistic traditions of the times.

The district retains a very high degree of historic integrity in its location, setting, design, materials, workmanship, feeling and association, as do each of the four contributing structures and contributing landscape site within the district. The district was not only designed as an area in which to locate the family mausoleums together, but it was intentionally designed so that the four, aligned in a row, overlooked the bluff to the river valley below, providing the most desirable views from the cemetery for some of the community's most prominent families. Although the trees have grown and limited the view, they create a private and serene environment for the mausoleums.

Minor alterations include the reconfiguration of the east retaining wall of the Brookman #1 Mausoleum and the placement of a concrete bench in front of that wall. The addition of the only traditional in-ground grave with headstone, located above the Brookman #1 Mausoleum within the nominated boundary, also occurred after the period of significance; this addition is unobtrusive and is not visible from the front elevations of the mausoleums. The bench and in-ground gravestone are included as non-contributing objects.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☐ A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B. Property is associated with the lives of persons significant in our past.
- ☒ C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

- ☐ A. Owned by a religious institution or used for religious purposes
- ☐ B. Removed from its original location
- ☐ C. A birthplace or grave
- ☒ D. A cemetery
- ☐ E. A reconstructed building, object, or structure
- ☐ F. A commemorative property
- ☐ G. Less than 50 years old or achieving significance within the past 50 years

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

The Bluff View Cemetery Mausoleum District is being nominated to the National Register for listing under Criterion C at a state level of significance as an excellent example of funerary architecture in South Dakota. It is an unusual grouping of four private, family mausoleums, arranged in a row along the hillside overlooking the wide river valley below.

While most mausoleums are above ground, stand-alone structures, these mausoleums are an unusual and interesting combination of above-ground and below-ground structures with the below ground vaults adjacent to each other. The vaults of each structure are recessed into the hillside; the only parts of the structures visible outside of the hillside are the front facades, portions of the side and upper walls of the central volumes, the roof structures, and attached retaining walls that also serve as exterior walls for portions of the vaults. Few cemeteries in South Dakota include mausoleums. There have been less than a dozen others identified to date, and this is the only known set of family-sized mausoleums to be grouped on the landscape.

The period of significance for the district begins in 1897, with the construction of the oldest mausoleum, and ends in 1965, with the completion of the most recent mausoleum. As they were constructed over multiple decades, they also exemplify a range of designs and materials used for this type of funerary architecture. This property meets Criteria Consideration D for cemeteries, which are usually not eligible for the National Register, because of its architectural significance.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

A BRIEF HISTORY OF VERMILLION AND BLUFF VIEW CEMETERY

Vermillion, the county seat of Clay County, is located in the southeastern corner of South Dakota. According to the 2020 census, the population was 11,695 making it the eleventh largest city in the state. It sits on a bluff overlooking the confluence of the Missouri and Vermillion Rivers.

Vermillion is located in an area inhabited by the Yankton / Ihanktonwan Dakota prior to white settlement. On April 19, 1859, Yankton leaders signed a treaty with the U.S. government, which in part relinquished 11 million acres in what became eastern South Dakota, apart from a 400,000-acre reservation tract along the Missouri River.² This treaty opened the land to American settlement, and Clay County was officially opened in July 1859. The town of Vermillion was founded on the banks of the Missouri River that year, making it one of the earliest towns to be established in the area that would become the state of South Dakota. At least 75 persons were said to have

County and State

resided within the county by early 1860 and the post office was established that April 17.³ A census conducted in 1862 showed that 256 persons lived in the Vermillion area.⁴

The creation of Dakota Territory on March 2, 1862 gave stability to the new settlements. The territorial legislature authorized the University of (South) Dakota, the state's first institution of higher learning, in Vermillion in 1862, which served to bring prominence to the town over the decades. Articles of incorporation for Vermillion were filed that year, and the city was incorporated in 1873.⁵ The population of Vermillion was 714 in 1880.⁶

The original townsite was located below the bluff on the banks of the Missouri River. A major flood in 1881 wiped out most of the town. More than 130 buildings were destroyed, many others were damaged, and the river channel was changed.⁷ In April of that year, the residents held a meeting and approved relocating to the top of the bluff and the rebuilding of the town began.⁸

Records indicate that there were a number of cemeteries throughout Clay County during and immediately following the settlement period. Two were known to exist in the Vermillion area. The first (name unknown) was located at the top of Chandler Hill. It was started c.1863 but was discontinued when the North Cemetery (sometimes called the Remington Cemetery) was established in 1870.⁹ The North Cemetery is itself a mystery and could not be located on historical maps. It may be that any burials there were relocated to Bluff View Cemetery when it was established a few years later.

A meeting to discuss the possibility of establishing a new city cemetery in Vermillion occurred in August 1881, as much new building and development was happening following the flood.¹⁰ In the spring of 1882, a ten-acre plot of land (located in the southeast quarter of Section 20, Fairview Township) was purchased from Thomas Jordan, and local citizens began making improvements to the property in preparation for its use as the cemetery.¹¹ The land was located at the southeast edge of Vermillion, on the bluff overlooking the river valley below, and, fittingly, the cemetery was named Bluff View Cemetery. The brick Bluff View Chapel was constructed in 1901 and listed in the National Register in 2006. The cemetery has been expanded twice. In 1917, the St. Agnes Calvary (Catholic) Cemetery was added on ten acres purchased from Carl Gunderson at the west end of Bluff View. The North Bluff View section was also an early addition although the exact year is not known.¹² There are currently no other cemeteries in Vermillion.

Unfortunately, all of the early records for the cemetery were lost in a fire in 1920. Much of the information about the cemetery, its growth and change over time, and the early families buried here has been pieced together with the use of family records and stories, Works Progress Administration records from 1940, and newspaper articles. Still, there are gaps in information pertaining to the history of this cemetery. The cemetery is managed by the Vermillion Cemetery Association.

MAUSOLEUMS: A HISTORICAL OVERVIEW

Mausoleums are free-standing structures designed to house the remains of the deceased. Historically, they had ancient beginnings as large, majestic monuments to important persons (such as kings and emperors). The word “mausoleum” derives from the Mausoleum at Halicarnassus (in present-day Turkey), the grave of King Mausolus. These early monuments blended art, architecture, and spirituality and reflected social status across various cultures and civilizations.¹³

The Roman Empire embraced the concept of mausoleums. They became iconic symbols of status and power. Early examples were largely influenced architecturally by Greek designs for temples, but as Christianity spread throughout the Roman Empire, mausoleum design began to diversify, reflecting the population’s changing religious beliefs. The use of mausoleums declined during the Middle Ages, but a renewed interest in classical antiquity during the Renaissance resulted in a resurgence in mausoleum construction. Masonry materials were preferred for their durability and permanence, including their resistance to weather events and pests. Architecturally, they continued to be lavish monuments adorned with intricate detail, and they continued to be reserved for the wealthy and powerful.¹⁴

Mausoleums continued to evolve, adapting to changing cultural and religious beliefs about death. In America, the construction of mausoleums began with the Rural Cemetery Movement in the 19th century as church graveyards in cities became overcrowded. American mausoleums were often smaller than some of the European precedents, although they continued to be associated with important persons and prominent, wealthy families. Stylistically, the preferred architecture incorporated elements and details of Classical and Gothic styles, as well as various revival styles.

In the early 20th century, larger public mausoleums began to appear in community cemeteries. They were multi-vault structures housing dozens or hundreds of burials and were exalted as a sanitary, “civilized” mode of burial. They also reflected the advances of modern building design, such as climate control and sustainable materials. To some they were revolutionary, making such burials affordable to common persons; to others they were seen as controversial and exploitive. They were particularly disliked by the companies who created and sold monuments and grave markers for in-ground graves.¹⁵

Between 1907 and the early 1940s, during a period sometimes referred to as “the community mausoleum movement,” many community mausoleums were constructed throughout America. They continued to embrace the architectural styles associated with Classical and Revival styles, including Neoclassical, Gothic Revival, Egyptian, Mission, and Art Deco styles. The earliest known community mausoleum was the Ganges Mausoleum, constructed in Richland County, Ohio in 1907; it had crypts for 80 burials.

The idea of a community mausoleum was developed by William Hood, who started the National Mausoleum Company in Shelby, Ohio in 1907. According to Oak & Laurel Cemetery Preservation, LLC, who have researched community mausoleums extensively,

The business model was speculative and designed for profit. National Mausoleum Company would approach a cemetery owner (typically a private association or municipality) and agree to construct a multi-vault mausoleum of the most up-to-date engineering and design. In return, the cemetery association would pay a percentage of the vault sales to the mausoleum company.

The company would advertise to the town’s citizens the benefits of above-ground, indoor community sepulture: it was as affordable if not cheaper than traditional in-ground burial; it was civilized and ensured the sanctity and cleanliness of the interred body. Communities throughout the Midwest bought in, hiring National Mausoleum Company to lease its protected patents for community mausoleums, and completing several in its first year.¹⁶

To implement this model, the National Mausoleum Company established mausoleum businesses in various locations, incorporating the businesses under required state and local laws and using business names associated with the locales in which the businesses were located. The company was reorganized as the International Mausoleum Company of Chicago in 1910, although they continued to use the name National Mausoleum Company for some time.¹⁷

The movement continued to spread westward after Hood’s death in 1911, due, in large part, to Cecil E. Bryan, an architect for the National Mausoleum Company. He designed at least 80 community mausoleums throughout the Midwest and west. Bryan’s final community mausoleum design was built in 1943 in Atlanta, Georgia.¹⁸

By 1950, the world – and America – had changed. The concept of community mausoleums was forty years old and Americans were ready for new and modern mausoleums. Mid-20th century mausoleums were larger and constructed of better materials and technology, reflecting the age of unparalleled American prosperity. The mausoleums of the mid-century set the stage for mausoleums through the remainder of the 20th century.¹⁹ Urban cemeteries, in particular, have used mausoleums to make efficient use of limited space.

Even with the development and spread of community mausoleums, significant persons and their families continued to choose private mausoleums for many reasons. Not unlike earlier in history, families who could afford private mausoleums valued the exclusivity afforded by them and chose them as symbols of their status in a community. They sometimes saw private mausoleums as opportunities to create structures that reflected their values, tastes and traditions through architectural expression. Family mausoleums also provided for generational planning, ensuring continuity and togetherness into the future. Mausoleums not only honored the important, significant persons for whom they were built, but they created a permanent legacy for the family.²⁰

MAUSOLEUMS IN SOUTH DAKOTA

A number of mausoleums have been identified in South Dakota, although there has been no comprehensive survey conducted to date. Most are small family mausoleums, constructed to provide burial space for anywhere from one to approximately twenty persons. They were usually constructed of stone and illustrate architectural styles popular for funerary architecture of their times, reflecting the styles found throughout the country. Little information has been found about who designed and constructed these mausoleums, and it is not known if the cemeteries themselves contracted with architects/designers and building contractors to construct these family mausoleums or if it was more common that the families themselves contracted with designers and builders. Companies that created funerary monuments and grave markers also offered the service of constructing mausoleums for families. For example, a newspaper article in 1899 reported that Judge Bartlett Tripp had contracted with a Sioux Falls firm to construct a mausoleum for his family in the Yankton City Cemetery.²¹ Another newspaper article in 1898 reported that a mausoleum being constructed in memory of Emma Goss Gilruth in Watertown was being designed by T.H. Pritchard, the proprietor of the Watertown Marble Works. The Clark S. West family mausoleum in Yankton was designed by a monument company in that town in 1916.²²

In addition to the four mausoleums located in the Bluff View Cemetery in Vermillion that are the subject of this nomination, others that have been identified include (chronologically):

1. Sage family mausoleum (1888) in Mount Pleasant Cemetery, Sioux Falls
2. Emma Goss Gilruth mausoleum (1898) in Mount Hope Cemetery, Watertown
3. Judge Bartlett Tripp family mausoleum (1899) in Yankton City Cemetery, Yankton
4. Clarence Bartlett family mausoleum (c.1907) in Riverside Cemetery, Pierre
5. Coats mausoleum (1915) in Woodlawn Cemetery, Sioux Falls
6. Pettigrew family mausoleum (1916) in Woodlawn Cemetery, Sioux Falls
7. Clark S. West family mausoleum (1916) in Yankton City Cemetery, Yankton
8. Fowler mausoleum (1920) in Mount Hope Cemetery, Watertown
9. Peter Nielsen Aggergaard (1921) in Hillcrest Cemetery, Irene
10. J.C. Sherman mausoleum (1925) in Mt. Calvary Cemetery, Rapid City
11. Bushfield family mausoleum (c.1948) in G.A.R. Cemetery, Miller

Clay County, South Dakota

County and State

Several of the above were prominent families in business and government, including a newspaper publisher, State Supreme Court chief justice and ambassador, governor, senators, and land investors.

In 1910, the National Mausoleum Company began operations in South Dakota when the South Dakota Mausoleum Company was established in Watertown with the purpose of building community mausoleums. Plans had been prepared for two mausoleums in Watertown – a large, 200-crypt structure in the Mount Hope Cemetery (owned by the city) and a smaller, 100-crypt structure at St. Mary's, the Catholic cemetery.²³ The designs, apparently one of the standard designs provided by the National Mausoleum Company, were nearly identical except for their size. The sale campaign began prior to construction, enticing prospective buyers with promises of the best building technology and materials available at a price that was affordable to all. The price for a crypt in the mausoleums was \$150.²⁴

The South Dakota Mausoleum Company wanted to expand beyond Watertown and by the summer of 1911, a team from the company was holding meetings in other communities in hopes of securing contracts for building additional community mausoleums. Their efforts took them to Madison, Brookings, and Yankton, as well as other towns. They also hoped to expand into North Dakota with plans to visit Fargo and Grand Forks.²⁵ Although the Watertown mausoleums were built, it is uncertain if the South Dakota Mausoleum Company was successful in convincing other communities to invest in community mausoleums.

In 1912, a second company specializing in mausoleums was incorporated as the Yankton Mausoleum Company. The company's partners were Robert Ferris, J.A. Danforth, and D.B. Gurney.²⁶ There is no evidence that this company was associated with the National Mausoleum Company or focused only on building community mausoleums. As no business records were found for this company, it is not known how long this company was in business, how many mausoleums they may have built, or where those mausoleums might be located.

Although no additional companies specializing in mausoleums in South Dakota have been found, there were several businesses that created and sold funerary monuments and grave markers. It is likely that some of them offered the services of building small family mausoleums, whether they designed and built them themselves or worked with architects and contractors to have them constructed. It would have been a logical extension of their services, since they were already in the funerary business and they had access to the materials (various stones) primarily used in mausoleum construction. Today, it is these companies who advertise the construction of mausoleums in the state.

²³ The Mount Hope Mausoleum in Watertown was listed on the National Register in 1986.

BLUFF VIEW MAUSOLEUMS

The Bluff View Cemetery Mausoleum District in Vermillion is an excellent example of the funerary practice of family mausoleums from the late 19th Century through the mid-20th Century. This district is unique in South Dakota as the only cemetery where there are four mausoleums that were intentionally placed together in a hillside area of the cemetery, creating their own private neighborhood. They are also unusual in their design. Rather than stand-alone, above-ground structures, they are a combination of above-ground structures fronting underground vaults, built into the hillside, where the family members are interred. They are constructed adjacent to one another, much like row houses on a city street, creating a cohesiveness in the district.

They were built for prominent families in Vermillion's history as symbols of status in the community. Not only was a family mausoleum a symbol of status but locating the district on the edge of the bluff provided the best view from the cemetery that overlooked the river valley below, further exemplifying the significance of these families.

Architecturally, the structures are excellent examples of the styles and materials associated with family mausoleums during this time period. All are masonry construction (three are stone, one is brick, with concrete elements) lending to the notion of permanence of these families and their legacies. Sioux quartzite was likely obtained from quarry sources within South Dakota, but the marble used on two of the mausoleums would have needed to be imported. The two oldest mausoleums use Classical elements in their design, the newest illustrates a mid-century modern appearance. The fourth, although not clearly an architectural style, has the gabled form of its preceding neighbor and is austere in the simplicity of the marble exterior that creates an elegant appearance of the absolute, irreversible finality of death.

The district's overall ambience is completed through its landscape features, both designed and natural. One of the main features of the landscape is the hillside into which the vaults of the mausoleums are buried. It is covered with grass (and a few yucca) and visually creates a separation from the rest of the cemetery, which cannot be seen from the front elevations of the mausoleums. Another feature that adds to the cohesiveness of the district is the pathway along the fronts of the mausoleums. For most of its length it is a grass and dirt footpath for visitors (although it has also been used by hearses to transport caskets for burial in the mausoleums), with the exception of a span of concrete pavement along the front of the Lewis-Thompson Mausoleum. Although the siting of these structures intended to provide an unobstructed view of the river valley below, the growth of trees, shrubs and other plants outside of the cemetery fence (just outside of the district boundary) on the edge of the bluff now mostly obstructs that view. Regardless, the overgrowth has created a sense of a forested park along the south edge of the district, which has further enclosed the district as its own "neighborhood." It creates a sense of serenity and of privacy.

What follows are additional details about each of the individual mausoleums and the families associated with each. Information came from a variety of sources including newspaper articles, other National Register nominations (including that of the S.E. and Anna Brookman House), FindAGrave.com, the Clay County Historical Society, and conversations with family descendants including Cyndy Chaney and Chris Johnson. Select citations are also included, and more information can be found in the bibliography.

Lewis-Thompson Mausoleum

The Lewis-Thompson Mausoleum, located at Block 5, Lot 989 of the cemetery, was built in 1897 for the Lewis and Thompson families, and their descendants, of Vermillion. It exemplifies family mausoleums of the late 19th Century in its use of stone for the visible portion of the mausoleum and its Classical style elements. Its design is attributed to Wallace L. Dow, a prominent architect in South Dakota (a discussion of this attribute is found in Section 7 of this document).

The earliest burial in the family vault was Eliza Ann Martin Lewis (in 1898), the matriarch of the family; her husband, William Lot Lewis (died in 1907) is also interred in the vault. This couple, originally from Clarendon, New York and later of Columbus, Wisconsin, eventually moved to Vermillion to be near their children who had settled there. William Lot and Eliza Ann Lewis had six children: Martin J., Adele, Anna Elizabeth, Lillian, Jennie, and Shubael.

Martin J. Lewis was born in Clarendon, New York and moved with his family to Columbus, Wisconsin when he was about 10 years old. When he was in his early twenties, he headed west and settled in Vermillion in 1869. He became a partner in a banking endeavor with his soon-to-be brothers-in-law, Darwin M. Inman and Myron D. Thompson. The private bank was originally known as D.H. Inman & Company, until it was later chartered as the First National Bank of Vermillion. It played a major role in financing the settlement of Dakota Territory. The three men also owned the firm of Thompson & Lewis, which operated the large grain elevator in Vermillion, and were dealers in agricultural implements. Lewis died in 1890 in Vermillion. It is not known where he was buried until the completion of the family mausoleum, but he was eventually moved there. He had no wife or children.

Myron Davison Thompson was born in Saratoga County, New York. At the age of 19, he moved to Columbus, Wisconsin, the town where he undoubtedly became acquainted with the Lewis family, who were living there at the time. He moved to Vermillion in 1867 and soon established a business venture. When Martin Lewis moved to Vermillion two years later, the business became known as the Thompson-Lewis Company. It grew into one of the most important grain, livestock, farm machinery and implement, and lumber businesses in southeast Dakota Territory. Together with Lewis and Darwin Inman, he also became involved in the banking business and after Inman's death in 1913, he served as the president of the bank, a position he held until his death in 1929. In 1870, he married Anna Elizabeth Lewis (one of Martin's sisters). They had two sons, Orville William and Martin Lewis. Both Myron and Anna are interred in the family mausoleum.

Darwin M. Inman, who was also from Clarendon, New York, was a very prominent citizen of Vermillion. He served as the president of the First National Bank of Vermillion for 38 years. As mentioned, the bank played a major role in financing settlement of the area. He was elected as a member of the Territorial Legislature for three terms. He was also a member of the first State Legislature and served for six years as chairman of the Democratic state central committee. He was a strong advocate for education and was involved in assuring that Vermillion became the home of the university; he served several terms as a trustee of the university, including terms when Wallace Dow was hired as the architect of the first university buildings. Inman married Adele Lewis (another of Martin's sisters) in 1874, and she, too, became a prominent member of the community—being active in the Baptist church and donating to the university's athletic facilities.

County and State

They had no children. Darwin died in 1913 and Adele in 1935; both are interred in the family mausoleum.

These three men were prominent in Vermillion's early history, contributing to the growth and success of the community in business, government, and education. Having achieved a high level of status and wealth, it is not surprising that they chose to have a family mausoleum constructed in the city's cemetery.

They also had built houses on adjacent lots on the 400-block of Main Street in Vermillion. The Lewis House and Inman House are extant and listed in the National Register of Historic Places; the former being part of the University Historic District, and the latter being individually listed and then included within the Jolley Historic District. The Thompson House, which was west of the Inman House, was demolished in 2020.

In addition to these family members, there are at least another fifteen family descendants interred in the mausoleum for a total of twenty-two. (They are listed in full at the end of Section 8.)

Brookman #1 Mausoleum

The first of the Brookman family mausoleums is located in Block 5, Lot 988. The exact date of its construction is unknown, but it probably was built soon after the death, in June 1904, of Frances Anne Brookman, the young daughter of Edgar D. Brookman (newspaper accounts of her death indicate that her remains were placed in the Lewis-Thompson Mausoleum until her place of burial could be completed). The mausoleum was indeed complete before March 1908 when Clark Young (a dean at the university) died, and his body was placed in the Brookman vault until a later date.

No information has been found about the designer or builder of the mausoleum. Its architectural style is in keeping with family mausoleums in the early 20th century, with its use of Classical elements. It is a bit unusual in the use of brick rather than stone for the exterior wall surfaces.

The Brookman family was prominent in Vermillion's early history and the choice of a mausoleum for family burials is fitting for the family's status in the community. A total of eleven family members are interred in the vault.

Edgar D. Brookman and his twin brother, St. Claire Edwin (S.E., also sometimes called Edwin or S.Edwin), were born in New York in 1855. They arrived in Vermillion in the mid-1880s. The twins were millers, and in the spring of 1890, they established the Vermillion Pearl Roller Flour Mill. The name of the mill changed to the Vermillion Milling Company in 1893.²⁷ In 1895, the Brookmans and their Vermillion Milling Company were granted a 20-year franchise to operate a steam-powered light plant, which provided the first electric lights in Vermillion. In June 1915, when the franchise ended, the City took over ownership of the light plant.²⁸

Edgar married Mary Frances Hunter in 1889. They had two daughters, Laura Lou and Frances Anne. Young Frances died at age 11 and was the first interment in the family vault. The Brookmans also

took four orphaned children into their home and raised them; they were Mabel, Maude, Merle and Murray McLaughlin, and a fifth child, Cecil Haxton, lived with them until graduating from high school. Both Edgar, who died in 1927, and his wife Mary Frances, who died in 1951, are interred in the mausoleum (Mary Frances is listed as Frances Hunter Brookman on the name plaque of the mausoleum). Both Edgar and Frances were well respected in the community for their contributions. For example, from 1898 to 1918, Frances was an active supporter of the women's suffrage movement at both local and state levels.²⁹

S. Edwin married Anna M. Collisi on August 25, 1885 in Topeka, Kansas. Both were active and outstanding citizens in the community. Both are interred in the mausoleum. Edwin died in 1919 and Anna died in 1948. They were the parents of four sons: Harold Edwin (born 1886), Murray Edwin Edgar (born 1890), and twins Lowell Collisi and Lawrence J. (born 1891). Each of the sons was successful in his own right and contributed to the community of Vermillion. The S. Edwin and Anna Brookman House in Vermillion has been listed in the National Register of Historic Places.

Harold, born in 1886 in Vermillion, became an engineer and architect. He married Mabel Ruth Timmerman in 1914, and they lived in Trenton, New Jersey for a number of years. They had two children: Bruce Terrance (born in 1915) and Janice Marie (born in 1919).³⁰ In 1921, they relocated to Vermillion where he became a faculty member of the USD School of Engineering. When the School of Engineering ended in 1933, Brookman developed the program in Applied Science and was a professor and chair of the program until his retirement in 1959. He also served as the university's chief engineer during his years at the university.³¹ Harold (who died in 1967) and Ruth (who died in 1971) are not interred in the family mausoleum but rather in a grave located above the vault of the mausoleum. Their grave is marked with a granite stone. The grave is located within the Bluff View Cemetery Mausoleum District boundaries but is considered a non-contributing resource.

Harold's brother, Murray Brookman (born in 1890), also studied engineering, first at USD and then at Harvard. After he completed his degree in 1909, he took a position in Indianapolis and later moved to Minneapolis.³² Although he made his home elsewhere, newspaper accounts show that Murray visited friends and family in Vermillion often. He eventually settled in California and is buried there.

In 1891, S.E. and Anna had twin boys, Lawrence and Lowell. Lawrence became a doctor, having graduated from Northwestern University in Evanston, Illinois and interned at Wesley Hospital in Chicago. He married Flo C. Metz in 1917 in Chicago, after which they returned to Vermillion. He initially practiced with his uncle, Anna's brother, until opening his own practice. He also served as the University's physician for a few years. He retired in 1947. He was a member of several community organizations and was a well-respected citizen. Lawrence and Flo had two daughters: Shirley Ann and Barbara Helen. Both Lawrence and Flo are interred in the family mausoleum;

County and State

Lawrence died in 1977 and Flo died in 1987. Both of their daughters and their spouses are also interred in the vault. Shirley married Charles Edward LaGrave, Jr; she died in 2004 and her husband died in 1997. Barbara married Loren Haskins Mahoney; she died in 2020 and her husband died in 2008.

Lawrence's twin brother, Lowell and his family, are the subject of the Brookman #2 Mausoleum. Information pertaining to this mausoleum is found following the information on the Harrington family.

Harrington Family Mausoleum

The Harrington Family Mausoleum (Block 5, Lot 987) was constructed for the John H. and Jane Davison Coats Harrington family. The exact date of construction is unknown – it did not exist when John died in 1895 (a newspaper article stated he was buried in the Bloomingdale Cemetery), but it had been constructed by the time his son, Samuel Mathew died in early 1924. No information was found about who designed or constructed the structure. Architecturally, it doesn't conform to a specific style but is rather austere in its clean lines and white marble.

There are eight family members interred in the vault. They include John H. and his wife, Jane Davison Coats Harrington. John was born in England and emigrated to America in 1858. He first settled near Portland, Maine and eventually made his way west, working as a farmer along the way. In September 1867, he took up a homestead in Clay County and he and his family endured hardships associated with farming. John held various township offices, served on the school board, and was justice of the peace. Although the family mausoleum had not yet been constructed at his passing in 1895, his remains were eventually moved to the family vault (date unknown).

John H. and Jane had six children. Isabelle married A.S. Wright and they settled in Kansas, where they are buried. Jane married A.H McDonald, who was also a farmer in Clay County; they are buried in the Spirit Mound Cemetery north of Vermillion. Cyrus "Bill" was a mining engineer in Alaska, where he was buried. Samuel Mathew became a farmer in Clay County, as did three of his brothers – John Thomas, Edwin James, and Walter Scott. All four of these brothers are interred in the Harrington Family Mausoleum. In addition, Nellie Spowage, the wife of Samuel, and Blanche Fairbanks, the wife of Edwin, are also interred in the family vault.

The Harringtons were known for raising excellent crops and high-grade stock. They were successful farmers. Samuel, the eldest son, also invested in real estate and had amassed some ranch land in the western part of the state. He was said to have become wealthy from his investments. Samuel committed suicide in March 1924 and was laid to rest in the family's mausoleum. His aged mother died in November 1924 and was also interred in the family vault. It may have been at that time that her husband and Samuel's father's remains were moved to the mausoleum.

Brookman #2 Mausoleum

This second Brookman mausoleum is located in Block 5, Lot 986 of the cemetery, adjacent to the Harrington Mausoleum to the east. According to family descendants, it was built in 1964-65, at the same time that a new home was built for Lowell and Olive Brookman in Vermillion. The mausoleum was designed and constructed by a local contractor/builder named Niels Urup. Little was found

Bluff View Cemetery Mausoleum District

Name of Property

Clay County, South Dakota

County and State

about this builder other than he was born in Denmark, and a passing mention that he built a number of houses in Vermillion and was a member of the Vermillion Civil Air Patrol.

As the other mausoleums in the district, this is a small private family mausoleum, built specifically for members of the Lowell Collisi Brookman family. It exemplifies architecture of the mid-20th century with its clean lines and lack of ornamentation. Its beauty comes from the use of rough-faced marble stones in shades of pink, gray and yellow. Only the door surround, where the name "BROOKMAN" is carved, provides a change in texture and relief from the wall face. At this time, there are only three family members interred in the vault, although reportedly there is space for others.

Lowell Collisi Brookman was the son of S.E. (Edwin) and Anna Collisi Brookman, and brother to Harold, Murray, and Lawrence (his twin). He was the chief electrician for the City of Vermillion for more than 45 years, where he oversaw the operation of the city's power plant that was originally developed by his father and his father's twin brother, Edgar. Lowell married Olive Bowie in 1914. Both are interred in this family vault: Olive died in 1970 and Lowell died in 1975. They had one daughter, Robin Jean. She attended the School of Art and Design in Minneapolis and got her nursing (RN) degree from St. Vincent's Hospital in Sioux City, Iowa. She worked as a nurse in California and Hawaii, as well as Sioux City. She married Warren B. Johnson in Vermillion in 1951 and they eventually settled in Arizona where she pursued her interests in art. She moved back to South Dakota in 2010. She died in 2011, at age 93, and was interred in the family mausoleum. Her son, Christopher, plans to also be interred there upon his death.

As members of the Brookman family, Lowell and his wife contributed to the legacy of the family and achieved the local status that afforded them the construction of their own mausoleum. No information was found about why Lowell chose to have a separate mausoleum constructed for his family rather than being interred in the original Brookman Mausoleum. It is possible that space in the original vault had become limited and Lowell wanted sufficient space for his family.

SUMMARY OF BURIALS IN EACH MAUSOLEUM

(Dates in parentheses indicate dates of death)

Lewis-Thompson Mausoleum

William Lot Lewis (1907) (married to Eliza)

Eliza Ann Martin Lewis (1898) (married to William Lot Lewis)

Martin J. Lewis (1890) (William & Eliza's son)

Adele Lewis Inman (1935) (William & Eliza's daughter; married to Darwin M. Inman)

Darwin M. Inman (1913) (Adele's husband)

Anna Elizabeth Lewis Thompson (1930) (William & Eliza's daughter, married to Myron Davison Thompson)

Myron D. Thompson (1929) (Anna's husband)

Bluff View Cemetery Mausoleum District

Blanche A. Fairbank Harrington (1941) (Edwin's wife)

Walter Scott Harrington (1941) (John & Jane's son)

Brookman #2 Mausoleum

Lowell Collisi Brookman (1975) (Edwin and Anna's son; Lawrence's twin brother)
Olive Blanche Bowie Brookman (1970) (Lowell's wife)

Robin Jean Brookman (2011) (Lowell & Olive's daughter)

COMPARATIVE ANALYSIS

As mentioned, there has been no comprehensive survey of mausoleums in South Dakota so far. As a result of the research for this nomination, eleven small private family mausoleums were identified that were likely built over fifty years ago, although there are most certainly others yet to be identified.

In comparing the four mausoleums in the Bluff View Cemetery Mausoleum District to the ten that were identified, it is evident that there are similarities. All of them are constructed of solid masonry, most of stone (granite, marble, and Sioux quartzite being the most common), in keeping with the building traditions throughout the country. It is also true that most of them used design elements associated with Classical Revival, Gothic Revival, Egyptian Revival, Mission Revival, Art Deco, or Mid-Century Modern architectural styles.

The Bluff View Cemetery Mausoleum District differs in two major ways. First, it is an intentional grouping of small family mausoleums, designed where they all face the same direction toward a common viewshed and are all aligned with a common setback. They are constructed adjacent to one another, much like row houses on a city street, creating a cohesiveness in the district. There have been no other groupings of historic mausoleums in the state identified to date.

Second, these mausoleums are of an unusual design. Rather than stand-alone, above-ground structures, they are a combination of above-ground structures fronting underground vaults, with the vaults built into the hillside, where the family members are interred. In only one instance was a similar design found - that is the Judge Bartlett Tripp family mausoleum in the Yankton City Cemetery. In 1899, Judge Tripp contracted with a Sioux Falls firm to construct a mausoleum for his family. The dimensions of the structure were to be 23x36 feet and it would contain twelve crypts. A large vestibule lined with marble would hold twelve marble columns, each topped with busts of family members. The structure would be built into a hillside, where the crypts would actually be under the ground, like these Bluff View mausoleums. The front of Tripp's mausoleum would be built of heavy stone blocks with a rough-cut surface. Rounded partial arches over the doorway and at the parapet edge of the roof over the entrance are Romanesque in design; smooth columns inset

County and State

into the entryway flank the doorway. A portion of the side wall of the structure is visible in the hillside and a short stone wall extending from the corner of the structure serves as a retaining wall for the hillside. The cost of the mausoleum was \$3000.³³ Although no information was found about the designer or builder of this mausoleum, it is possible that Wallace Dow may have been involved in the design and construction. It is likely that Judge Tripp and Wallace Dow were acquaintances, having both lived in Yankton at the same time. Dow had relocated to Sioux Falls by the time Tripp hired an unnamed firm from that city to design and build his family's mausoleum in 1899. In addition, this mausoleum has several hallmarks of Dow's designs in its Richardsonian Romanesque style of architecture constructed of heavy blocks of stone. Its similarity to the Lewis-Thompson Mausoleum in Vermillion is notable.

CONCLUSION

The Bluff View Cemetery Mausoleum District is eligible for listing in the National Register under Criterion C as an excellent example of funerary architecture in the form of an intentional group of four private mausoleums set together in an area separate from the rest of the cemetery. They exemplify the architecture of small family mausoleums constructed in the late 19th and early to mid-20th centuries in America. They are built of masonry and follow the stylistic traditions of the times.

The district retains a very high degree of historic integrity in its location, setting, design, materials, workmanship, feeling and association, as do each of the individual contributing resources within the district. The district was not only designed as an area in which to locate the family mausoleums together, but it was intentionally designed so that the four, aligned in a row, overlooked the bluff to the river valley below, providing the most desirable views from the cemetery for some of the community's most prominent families.

There are only two small non-contributing objects in the district. Neither is visually intrusive and they blend well with the landscape of the district. The first is a bench in front of the Brookman #1 Mausoleum; the second is a grave located above the vault of the same mausoleum. Both are outside of the period of significance and do not relate to the mausoleums' architectural significance.

Verbal Boundary Description (Describe the boundaries of the property.)

The nominated district is located within Bluff View Cemetery in the City of Vermillion, Clay County, South Dakota. It includes Lots 986, 987, 988, and 989 in Block 5 of the cemetery plat, as well as the surrounding area located between the southernmost cemetery road (north district boundary) and the fence line at the southern edge of the cemetery property (south boundary); the east and west boundaries extend from the points where the district pathway connects to the cemetery road south to the fence line.

Boundary Justification (Explain why the boundaries were selected.)

The boundary includes the area within the cemetery that was designated for the location of the four private family mausoleums and the immediately adjacent area associated with the mausoleums.

Paperwork Reduction Act Statement: This information is being collected for nominations to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C.460 et seq.). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Estimated Burden Statement: Public reporting burden for each response using this form is estimated to be between the Tier 1 and Tier 4 levels with the estimate of the time for each tier as follows:

- Tier 1 – 60-100 hours
- Tier 2 – 120 hours
- Tier 3 – 230 hours
- Tier 4 – 280 hours

The above estimates include time for reviewing instructions, gathering and maintaining data, and preparing and transmitting nominations. Send comments regarding these estimates or any other aspect of the requirement(s) to the Service Information Collection Clearance Officer, National Park Service, 1201 Oakridge Drive Fort Collins, CO 80525.
