MEMORANDUM

DATE: May 18, 2022

TO: Mike Behm, Director
Division of Planning and Engineering

FROM: Joanne Hight, Administration Program Manager

SUBJECT: Transportation Commission Meeting – May 26, 2022
Item for Consideration

Consideration of 2023 Bridge Improvement Grant (BIG) Procedures and Five-Year County Highway
and Bridge Improvement Plan Guide
Bridge Improvement Grant (BIG) Procedure

South Dakota
Department of Transportation
Office of Local Government Assistance

Appendix D – Construction Engineering Requirements ............................................................................. D1-D9
Appendix E - Bridge Improvement Grant Sign Layout ............................................................................... E1-E2
Appendix F - Bridge Improvement Grant Checklists ............................................................................... F1-F4
I. Objective:

In 2015, the South Dakota Legislature created the Bridge Improvement Grant (BIG) fund that provides $7 million for local government bridges derived from an increase in license plate fees. In addition, the South Dakota Department of Transportation (SDDOT) will add $26 million in state funds, for a total of $33 million made available in the bridge grant program for the 2023 cycle of grants. The objective of these procedures is to define how these BIG bridge funds will be recommended for award and administered. Funding for the BIG program is not intended to be used for expansion of infrastructure with creation of new routes on new alignments.

II. Definitions

ADT - Value of average daily traffic on the bridge. This item will be based on the data in National Bridge Inventory Item 29.

Bid Review Ready – For preservation or rehabilitation/replacement projects, a project application is bid review ready if it contains final, internal consultant review and complete plans ready for DOT review (with scope complete as per Appendix B or C), including all necessary certifications (utility, right-of-way, and any others that are required), wetland mitigation proposals, and permits (404, Stormwater, Railroad, etc.). If the project is to be let by Local Public Agency (LPA) instead of SDDOT, the application must also include an Engineer’s Estimate, Bid Proposal, Specifications, and Construction Management Plan to be considered review ready.

Bridge - As defined in the National Bridge Inspection Standards (NBIS): A structure, including supports, erected over a depression or an obstruction, as water, highway, or railway, the structure having a length measured along the center of the roadway of more than twenty feet between undercopings of abutments or extreme ends of openings for multiple boxes and pipes where the clear distance between openings is less than half of the smaller contiguous opening. Refer to the following examples.
Multiple pipes may be considered a bridge if the distance between the pipes is less than half of the smallest opening and the structure length is greater than 20 feet. In the above illustration, the structure length is recorded as 20.85 feet.
Report measurement \( A \).

Figure 16. Profile view of a four-sided, mult-cell culvert under fill.

Figure 14. Profile view of a single span bridge with pile bent abutments.

Figure 15. Profile views of various single span bridges.
**Bridge Improvement Grant (BIG)** – Grant available to LPA for preliminary engineering, bridge preservation, structure replacement or major rehabilitation.

**Bridge Preservation** – Actions or strategies that prevent, delay or reduce deterioration of bridges or bridge elements, restore the function of existing bridges, keep bridges in good or fair condition and extend their service life. Preservation actions may be cyclic or condition-driven.

**Condition rating** - The condition rating of a bridge as reported in the national bridge inventory.

**Construction Engineering** – Administration, oversight, and testing of all construction activities by SDDOT or an engineer listed on the SDDOT retainer contract list for the Construction Administration work type. Construction Engineering costs are eligible for grant funds at 80% of actual costs, but are not included in the grant cap.

**Culvert Condition** – Condition rating of culvert. This rating will be based on the data in National Bridge Inventory item 62.

**Deck Condition** – Condition rating of the part of the structure that carries traffic. This rating will be based on the data in the NBI item 58.

**Detour Length** - Minimum additional length of travel required if the bridge in question was closed. Detour route shall be located on a full maintenance road and must allow passage of a legal weight, height, and width vehicle. The NBI detour length for an on-system bridge will be based on the location of the nearest on-system route that will allow the legal load to pass. For an off-system bridge, the detour length will be based on the nearest route that will allow passage for the legal load. NBI detour lengths are determined as impact to through traffic only (points A to B in Figure 102 and 103). User impact will be based on actual length as reported in the NBI. If detour length in the NBI is listed as “99” (indicates greater than 100 miles, or is a dead end), further investigation by SDDOT is required to ensure that an appropriate detour length is used. Refer to following for examples:

Highway feature carried on the bridge with a 4-mile detour (*Figure 102*). Report 4.

![Figure 102. Detour map for a highway feature carried on the bridge.](image)
Highway feature passes below the bridge with a 0-mile detour (Figure 103). Report 0.

![Detour map for a highway feature that passes below the bridge.](image)

Figure 103. Detour map for a highway feature that passes below the bridge.

**DOT Format (Required on all Engineer’s Cost Estimates)** – Cost plus fixed fee (Maximum allowable fixed fee rates: Preliminary Engineering & Replacement Projects – 13%, Preservation & Rehabilitation Projects – 14%.)

**Engineer’s Cost Estimate** – A cost estimate of all eligible items projected to the anticipated year of construction and up to a 15% contingency to be included with the BIG application. This amount as reviewed and approved by SDDOT will establish the maximum limiting amount of the grant that will be awarded. Non-eligible items need to be listed separately and not included in the grant amount but are included in the estimated total project costs shown on the application. Lump sum contingency is not eligible if shown as a line item.

**Federal-aid System** – A public highway eligible for assistance from the Federal Highway Administration other than a highway functionally classified as a local road or rural minor collector.

**Full Maintenance Road** – A road on the South Dakota Non-State Public Road Inventory that has not been designated as a Minimum Maintenance Road or a No Maintenance Road.

**Fracture Critical** – Fracture-critical members or member components (FCMs) are steel tension members or steel tension components of members whose failure would be expected to result in a partial or full collapse of the bridge. This designation is based on data in the NBI.

**Local Public Agency (LPA)** – Any local public agency authorized by statute to own, maintain, and govern the use of a bridge.

**Minimum Maintenance Road** – A road that has been lawfully designated by a board of county commissioners or a township board as a minimum maintenance road.
National Bridge Inventory (NBI) – A database, compiled by the Federal Highway Administration, with information on all bridges in the United States that have roads passing above or below. If LPAs finds inaccuracies or discrepancies with the data, they should work with their consulting engineer and SDDOT to correct the information recorded in the NBI.

No Maintenance Road – A township or county road that has been lawfully designated by a township board or county commission as a no maintenance road.

Off-System - Public Roads, other than those on a Federal-aid System.

On-System - Public Roads, on a Federal-aid System. This designation will be based on data in NBI item 26.

PE-BIG – Grant available to perform preliminary engineering work, including but not limited to preservation/rehabilitation/replacement investigation studies, traffic data collection, surveys, bridge hydrologic/hydraulic (H/H) studies, including the type, location and size recommendation, and foundations investigation.

Posted – refers to a bridge that is signed for less than legal loads. This designation will be based on data in NBI item 70.

Preservation BIG– Grant for deck replacements, minor repair and preservation work that is within the financial limits set in Section III of this procedure. Examples are scour projects, fatigue retrofits, waterproofing joints, painting, safety upgrade rail/barrier, or deck treatments (such as concrete overlays, polymer overlays, asphalt & membrane overlays, and epoxy chip seals). The goal of a Preservation BIG is to preserve the structure elements and extend the service life of the structure.

Rehabilitation Projects – Major repair/rehabilitation work or combination of minor preservation work valued greater than financial limits to be classified as rehabilitation/replacement work as set in Section III of this procedure. Any superstructure (with exception of deck replacements) or substructure repair will be considered a major rehabilitation.

Replacement Projects – Total replacement of a bridge.

Scour Critical – A bridge with a foundation element that has been determined to be unstable for the observed or evaluated scour condition. This designation is based on NBI appraisal item 113 (Scour) having a value of 3 or less or having unknown foundations.

Substructure Condition – Condition rating of the part of the structure that supports the superstructure (piers, bents, abutments). This rating will be based on the data in the NBI item 60.
**Superstructure Condition** – Condition rating of the part of the structure that supports traffic (deck, slab, girders). This rating will be based on the data in the NBI item 59.

**Wheel Tax** – Imposition of a tax by County ordinance as authorized in South Dakota Codified Law Ch. 32-5A on vehicles with a gross vehicle weight of over 6,000 pounds.
III. Funding Responsibilities

**State Bridge Improvement Grant (BIG) Funds** - Funding will be made available for eligible On and Off-System LPA bridges for preliminary engineering, preservation, rehabilitation, or replacement in accordance with state laws, administrative rules and this Procedure; the funds available for award will be recommended to the Transportation Commission by the SDDOT Director of Planning & Engineering prior to each award. Up to 80 percent of authorized work may be funded through the BIG fund. Requests for deviations from this Procedure will be made upon application and considered at the time of grant award.

**Local Funding Responsibilities** – The LPA will be responsible for a minimum of 20 percent of eligible costs. The LPA will be responsible for 100 percent of ineligible costs, including costs that exceed the grant amount. Right of Way costs, utility relocations, roadway surfacing, fencing, aesthetics, off-site environmental mitigation and monitoring costs, LPA staff wages and expenses, and any costs incurred prior to notice of award date will be considered ineligible. Final determination of eligible costs will be determined prior to any work being performed. SDDOT and the LPA must execute a grant project agreement before any grant funds will be disbursed.

**Limiting Amounts** – To be eligible to apply for a Preservation BIG, anticipated grant expenditures (including engineering) must meet or exceed $30,000. To be eligible to apply for a BIG for rehabilitation or replacement projects, anticipated grant expenditures (including engineering) must meet or exceed $100,000. Unless the grant applicant justifies otherwise prior to grant award, engineering hours for a PE-BIG should not exceed 451 hours for small drainage areas (unnamed tributaries/creeks), 601 hours for medium drainage areas (named non-navigable creeks and rivers) and 901 hours for large drainage areas (navigable rivers). In any consecutive three-year period, no LPA may be awarded more than $8,000,000 in total BIG funds unless the BIG portion of a single structure exceeds this amount. The Director of Planning & Engineering may recommend that the Transportation Commission adjust the limiting amounts prior to each selection process. Refer to Table III-1.

IV. Screening Criteria

SDDOT will perform a preliminary screening of all bridges to determine if the bridges meet the minimum requirements of the BIG program. This preliminary screening does not guarantee eligibility or award. Any application that does not meet the minimum requirements will not be scored or ranked and will be recommended for rejection. SDDOT may verify accuracy of the data within the NBI for the qualified bridges. The SDDOT and LPA may correct any inaccuracies identified in the review of each BIG application.

Bridges owned by cities and towns are eligible for BIG funding. Bridges owned by private individuals, development groups, Federal Agencies, state agencies, or Tribes are not eligible.

To be eligible for a BIG, County owned bridges must be listed on the “Project Listing” in that County’s Highway and Bridge Improvement Plan as approved by SDDOT. The County must also have imposed a wheel tax.

The following screening criteria will be considered in the BIG award process:

A. All Projects:

1. Bridge Function – Bridge must serve multiple residences, farms, ranches or a multi-lot development. The bridge cannot be located on a “No Maintenance” or a “Minimum Maintenance Road”, and the roadway served by the bridge cannot terminate into a field entrance, a driveway, single residence, farm, or ranch.
2. **NBIS (National Bridge Inspection Standards)** - LPA must be in full compliance with Federal and State inspection requirements including but not limited to posting of load restrictions.

3. **Five-Year County Highway and Bridge Improvement Plan** – A county must have a SDDOT approved transportation plan and the bridge must be in the County’s 5-year plan. (This requirement does not apply to cities and towns.)

4. **Wheel Tax** – A county in which the bridge is located must have an active wheel tax imposed on the residents of the county for vehicles with a gross vehicle weight of more than 6,000 pounds.

5. **Bridge Status** – No bridge can be under contract or advertised for bid for any type of improvement at the time of the grant award.

**B. PE-BIG**

1. **Cost of Project** – Total costs, including engineering, fall within the requirements as established in Section III of this procedure.

2. **General Maintenance** – The LPA must show proof of general maintenance on the bridge, including a description of all work performed, a list of materials costs incurred, a statement regarding whether reoccurring maintenance items have appeared on inspection forms, and any other pertinent maintenance information.

**C. Preservation BIG**

1. **Cost of Project** – Total costs, including design, construction and construction engineering fall within the requirements, as established in Section III of this procedure.

2. **Extends Service Life** – Project is projected to extend the service life by at least 10 years.

3. **General Maintenance** – The LPA must show proof of general maintenance on the bridge, including a description of all work performed, a list of materials costs incurred, a statement regarding whether reoccurring maintenance items have appeared on inspection forms, and any other pertinent maintenance information.

**For Bridge Deck Overlays** – Bridge deck overlays will be considered based on criteria set out in Table IV-1 and the general criteria that follow the table.

**Bridge Deck Replacements** – Bridge deck replacements will be considered for
Preservation BIG under this grant program. Deck replacements may be considered when the condition of the deck exceeds the criteria for successful overlays. Both substructure and superstructure must be in good or fair condition for consideration of a deck replacement with a Preservation BIG.

**Table IV-1**

General Criteria

<table>
<thead>
<tr>
<th>#New Polymer Overlay</th>
<th>Structure Age</th>
<th>No restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deck Condition</td>
<td>Element Condition State 1 or 2**</td>
<td>&lt;5% Delamination***</td>

<th>&lt;10% Delamination***</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deck Condition</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Deck Thickness</td>
<td>≥ 6.75” and &gt;1” clear cover of resteel</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Replacement Concrete Overlay (2nd or 3rd Overlays)</th>
<th>Overlay Age</th>
<th>20 or more years*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overlay Condition</td>
<td>Element Condition State 3 or 4**</td>
<td></td>
</tr>
<tr>
<td>Substrate (Deck/Slab)</td>
<td>Element Condition State 1 or 2</td>
<td></td>
</tr>
</tbody>
</table>

Structures submitted for new Rigid Concrete Overlays must also be checked for impact on Load Capacity prior to applying for grant funds.

All overlay applications should include a delamination survey. Generally, polymer overlay projects should be limited to locations where the bridge is subject to chloride applications.

* Structure age is only a general guideline. Structures outside of these age parameters can be considered if they are in good condition or if joints can be eliminated (eliminate simple spans). For replacement concrete overlays, overlay condition and substrate condition are the critical factors.

** American Association of State Highway Transportation Officials (AASHTO) Element Condition States

*** Bridge deck delamination:
- If less than 5% delamination/spalls - Candidate for polymer chip seal
- If less than 10% and more than 5% - Candidate for a concrete overlay
- If greater than 10% - further evaluation of total bridge life, life cycle cost, etc.

# New polymer overlays have also been used to seal badly cracked concrete overlays and new slabs/decks with epoxy coated resteel that have a significant cracking problem, too extensive for individual crack repair.
D. Rehabilitation and Replacement BIG

1. **Cost of project** – Total costs, including design, construction and construction engineering fall within the requirements, as established in Section III of this procedure.

2. **Bridge Condition and Alternatives** – Bridges must be classified in poor condition (NBI Condition Rating of 4 or less for Deck, Superstructure, Substructure, or Culvert) to be eligible for rehabilitation or replacement. All bridges must be evaluated for potential rehabilitation prior to any consideration for replacement. The condition, age, structure type, scour criticality, and potential preservation or rehabilitation alternatives shall be reviewed for each bridge. The feasibility of those alternatives and the economics of replacement versus rehabilitation shall be considered. Generally, when the rehabilitation costs are estimated at 60% or more of the replacement costs, then replacement may be justified. Existing bridge removal with a no-build is a viable option for this category.

3. **General Maintenance** – The LPA must show proof of general maintenance on the bridge, including a description of all work performed, a list of materials costs incurred, a statement regarding whether reoccurring maintenance items have appeared on inspection forms, and any other pertinent maintenance information.

V. Selection Process

The SDDOT will conduct the BIG selection process annually. PE-BIG applications are due August 1 of each calendar year. The Transportation Commission will consider these applications by October 30 of the same year. Pre-applications for Preservation grants, if submitted, are due by September 1 of each calendar year. Applications for Preservation, Rehabilitation and Replacement grants are due by January 2 of the following year and will be considered by the Transportation Commission by April 30 of that year.

A. **Preliminary Engineering Bridge Improvement Grant (PE-BIG)**

1. A bridge that meets Section IV criteria of this procedure may be eligible for a PE-BIG grant.

2. LPA will complete and submit application to SDDOT by August 1 each year for eligible
3. SDDOT’s recommendation of award of PE-BIG grants will be based on available funding and the scoring process as detailed in Section VI.

B. Preservation Bridge Improvement Grant (Preservation BIG)

1. For a Preservation BIG, LPA may submit a pre-application that details a bridge’s preservation needs as determined by LPA’s Bridge Inspection Engineer. Included in the pre-application are a draft application form, site map, most recent inspection report, and a one-page description of the proposed preservation treatment. Advantages of submitting a pre-application would be for collaboration on preservation recommendations for the project scope. An example would be proposing a deck seal treatment vs. a deck-overlay vs. a deck replacement.

2. The SDDOT will determine if a site visit is needed to review the proposed preservation treatment and recommend modifications.

3. LPA will complete and submit final application to SDDOT by January 2 of each year, for eligible bridges.

4. Applications should include all pertinent information including maps, photos, inspection reports, delamination surveys, and information relating to the preservation treatments being recommended so that adequate information is available for the ranking process. A detailed engineer’s cost estimate showing design costs, construction costs, and construction engineering costs, shall also be included with the application.

5. SDDOT’s recommendation of award of Preservation BIGs will be based on available funding, the scoring process as detailed in Section VI, and SDDOT’s determination of project feasibility and constructability and whether the proposed project addresses structural deficiencies.

C. Bridge Improvement Grant (BIG) for Bridge Rehabilitation or Replacement

1. LPA will complete and submit application to SDDOT by January 2 of each year, for eligible bridge(s).

2. LPA’s application must include the Type, Size, and Location (TS&L) report (see
Appendix A), and a detailed engineer’s cost estimate showing design costs, construction costs, and construction engineering costs.

3. SDDOT will use current inventory condition reports at the time of final application review for the scoring process in Section VI.

4. SDDOT’s recommendation of award of BIGs for rehabilitation or replacement will be based on available funding, the scoring process as detailed in Section VI, and SDDOT’s determination of project feasibility and constructability and whether the proposed project addresses structural deficiencies.

VI. Scoring Criteria

A. Preliminary Engineering and Rehabilitation/Replacement Grants

SDDOT will use engineering judgment when applying the following scoring criteria to rank the competing qualified applications:

1. **Bridge Condition (50 points maximum)**
   a) **Posted** (28 points maximum) – See the definition of “Posted” in the definitions section. Points will be awarded in accordance with Table VI-1.

<table>
<thead>
<tr>
<th>Bridge Inventory Code</th>
<th>Relationship of Operating Rating to Maximum Legal Load</th>
<th>Ranking Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>NO POSTING REQUIRED</td>
<td>0</td>

<tr>
<td>3</td>
<td>10.0 TO 19.9% BELOW</td>
<td>12</td>
</tr>
<tr>
<td>2</td>
<td>20.0 TO 29.9% BELOW</td>
<td>18</td>
</tr>
<tr>
<td>1</td>
<td>30.0 TO 39.9% BELOW</td>
<td>24</td>
</tr>
<tr>
<td>0</td>
<td>&gt; 39.9% BELOW</td>
<td>28</td>
</tr>
</tbody>
</table>

   b) **Substructure Condition** (6 points maximum) – See the definition of “Substructure Condition” in the definitions section of this Procedure. Points will be awarded in accordance with Table VI-2.

   c) **Superstructure Condition** (6 points maximum) – See the definition of “Superstructure Condition” in the definitions section of this Procedure. Points will be
awarded in accordance with Table VI-2.

<table>

<td>6</td>
</tr>
</tbody>
</table>

d) **Culvert Condition** (12 points maximum) – See the definition of “Culvert Condition” in the definitions section of this Procedure. Points will be awarded at two times the value as shown in Table VI-2.

e) **Fracture Critical** (5 points or zero points) – See the definition of “Fracture Critical” in the definitions section of this Procedure. Five points will be awarded if the structure is determined to be fracture critical.

f) **Scour Critical** (5 points or zero points) – See the definition of “Scour Critical” in the definitions section of this Procedure. Five points will be awarded if the structure is determined to be scour critical.

2. **User Impact** (20 points maximum) - User Impact will be a variable that measures impact on users of the bridge and will be calculated by multiplying the ADT for the bridge by the Detour Length. The points will be assigned based on the following formulas with the maximum value for user impact capped at 20 points:

   \[
   \text{User Impact (On-System)} = \frac{\text{ADT} \times \text{Detour Length (miles)}}{350}
   \]

   \[
   \text{User Impact (Off-System)} = \frac{\text{ADT} \times \text{Detour Length (miles)}}{100}
   \]

3. **Local Planning** (30 points maximum for counties/ 20 points for cities)
   a) **Wheel Tax** (10 points maximum) – See the definition of “Wheel Tax” in the definitions section of this Procedure. Points will be awarded to counties in accordance with Table VI-3, based on imposition of a wheel tax on vehicles with a gross vehicle weight of
6,000 pounds or greater. This section does not apply to cities.

</tbody>
</table>

b) **Bid Review Ready (10 points or zero points)** – See the definition of “Bid Review Ready” in the definitions section of this Procedure. For rehabilitation or replacement projects, 10 points will be awarded if the project is Bid Review Ready.

c) **LPA Financial Commitment (10 points maximum)** – For any LPA cost share beyond the required 20%, additional points will be awarded as shown in Table VI-4.

4. **City Scoring** (90 points maximum)– City points will be prorated to a 100-point system to align with other LPA projects.

B. **Preservation Grants**
SDDOT will use engineering judgment when applying the following Scoring Criteria to rank the competing qualified applications:

1. **User Impact (5 points maximum)** - User Impact is a variable that measures the impact on the users of the bridge and will be calculated by multiplying the ADT by the Detour Length. Points will be awarded based on application of the following formulas, with the maximum value for user impact capped at 5 points:
   
   \[
   \text{User Impact (On-System)} = \frac{\text{ADT} \times \text{Detour Length (miles)}}{1400}
   \]
   
   \[
   \text{User Impact (Off-System)} = \frac{\text{ADT} \times \text{Detour Length (miles)}}{400}
   \]

2. **Cost Ratio (10 points maximum)** – If the total estimated cost of bridge preservation is 60% or more of the total estimated cost of bridge replacement, then 0 points will be awarded. One point will be awarded for every 5% increment below 60%, with a maximum of 10 points awarded.

3. **Wheel Tax (10 points maximum)** – Points will be awarded to counties in accordance with Table VI-3. This section does not apply to cities.

4. **LPA Financial Commitment (10 points maximum)** – For any LPA cost share beyond
the required 20%, additional points will be awarded as shown in Table VI-4.

5. **Load Rating (zero, 5, or 10 points)** – If the proposed preservation work is not likely to have an impact to the load rating or will have a negative impact, then 0 points will be awarded. If the proposed preservation work is likely to improve but not eliminate the load rating, then 5 points will be awarded. If the proposed work is likely to remove an existing load restriction, then 10 points will be awarded.

6. **Scour (5 points or zero points)** – If the proposed work addresses scour, 5 points will be awarded.

7. **Substructure Condition (5 points or zero points)** – If the proposed work is likely to improve the substructure condition, then 5 points will be awarded.

8. **Superstructure/Deck Condition (5 points or zero points)** – If the proposed work is likely to improve the superstructure or deck condition, then 5 points will be awarded.

9. **Culvert Condition (10 points or zero points)** – If the proposed work is likely to improve the condition of a culvert, then 10 points will be awarded.

10. **Service Life (20 points or zero points)** – If the proposed work is likely to extend the service life of the structure by more than 10 years, then 20 points will be awarded.

11. **Quality of Project (20 points maximum)** – Up to 20 points may be awarded if the proposed preservation work is an appropriate and effective treatment for the bridge. Consideration will be given to a low sufficiency rating, if the structure is Fracture Critical, if general maintenance has been done on the structure, and overall constructability of the project.

12. **City Scoring (90 points maximum)** – Points for cities will be prorated to a 100-point system to align with other LPA projects.

**VII. Project Development Requirements Following Grant Award**

After receiving a grant award, LPA and SDDOT will enter into a grant agreement. LPA will select a professional engineering firm from the current SDDOT consultant retainer list for the applicable category of work. In acquiring any necessary real property interests for the bridge project, the LPA will follow the Uniform Act. The LPA will coordinate any utility notification and relocation. The LPA will also be responsible for any coordination regarding FEMA floodplain
impacts. The SDDOT will review all project plans and the project will not be advertised for bids until LPA receives SDDOT's letting authorization.

Unless the LPA and SDDOT agree otherwise in writing, the following responsibilities will be undertaken by the LPA and SDDOT after grant award:

A. For Preliminary Engineering Studies
   1. The LPA will:
      a) Select a professional engineer from SDDOT Consultant Retainer List for Local Government or State Bridge Design;
      b) Participate in all planning, scoping, and inspection meetings; and
      c) Review and comment on TS&L Report.
   2. The SDDOT will:
      a) Hire the LPA selected consulting firm for preliminary engineering;
      b) Invite LPA to all planning, scoping, and inspection meetings;
      c) Submit draft TS&L to LPA for review and comment;
      d) Prepare the final TS&L Report; and
      e) Conduct the foundation investigation and provide recommendations.

B. For All Bridge Preservation Treatments
   1. The LPA will:
      a) Select and hire a professional engineer from SDDOT Consultant Retainer Lists for Local Government or State Bridge Design. Any geotechnical sub-consultants must also be on the SDDOT Consultant Retainer List for Geotechnical Services;
      b) Obtain and submit to SDDOT for comment all bid documents, plans, design calculations, independent check design calculations, hydraulics/hydrology reports, geotechnical/foundation reports, scour analyses reports, load rating and analyses reports for the bridge inspection file (emergency vehicles (where applicable), 3 South Dakota trucks & 4 special haul vehicles (SU4-7) and notional rating load), Construction Management Plan, and specifications sealed and signed by a professional engineer licensed in the State of South Dakota;
c) Coordinate environmental clearance with U.S. Army Corps of Engineers (USACE), if applicable;

d) Obtain all necessary permits (such as USACE 404, DOT, Federal Lands, BIA, Tribal, Stormwater, Municipal, etc.);

e) Ensure incorporation of construction engineering and testing requirements in the bid documents;

f) Address in writing, to the satisfaction of SDDOT, all SDDOT review comments;

g) Provide certifications for Right of Way (ROW) acquisition and Utility Notification.

h) After receipt of SDDOT letting authorization, advertise the project for bids and conduct bid letting;

i) Obtain SDDOT concurrence in the proposed bid award;

j) Enter into a construction contract and send a copy to SDDOT;

k) Issue the contractor a Notice to Proceed and send a copy to SDDOT;

l) Select a construction engineer and enter into an agreement for construction engineering (CE) services which shall include an initial NBI inspection and send a copy to SDDOT;

m) Pay construction contractor and consultants in accordance with their contracts with LPA;

n) Request reimbursement from SDDOT for eligible expenses based on certified pay application forms; and

o) Provide SDDOT as-built plans, construction change orders, and notification of completion of project.

2. The SDDOT will:

a) Conduct an initial environmental review and provide information and input to the LPA;

b) Prior to advertisement for bids, review and offer comments on plans, applicable design calculations, independent design calculation checks, scour analyses, load rating and analyses for the bridge inspection file [emergency vehicles (where applicable), 3 South Dakota trucks & 4 special haul vehicles (SU4-7) and notional rating load], specifications, costs estimates, and bid documents as applicable to the project;
c) Review and offer comments on the Construction Management Plan for construction testing and inspection; and

C. For All Bridge Rehabilitation/Replacements

1. The LPA will:

   a) Select and hire a professional engineer from the SDDOT Consultant Retainer List for Local Government or State Bridge Design; any Geotechnical sub-consultants must also be on the SDDOT Consultant Retainer List for Geotechnical Services.

   b) Conduct ROW acquisition and provide ROW certification to SDDOT;

   c) Conduct any required utility notification, relocation, and provide utility certification to SDDOT;

   d) Coordinate with FEMA for any necessary FEMA floodplain map revisions;

   e) Provide any needed wetland or stream mitigation needed for the project;

   f) Obtain all necessary permits (such as USACE 404, DOT, Federal Lands, BIA, Tribal, Stormwater, Municipal, etc.);

   g) Comply with terms as established in the SDDOT Consultant Retainer Contract;

   h) Address in writing, to the satisfaction of SDDOT, all SDDOT review comments;

   i) Obtain and submit to SDDOT for comment all bid documents, plans, design calculations, independent check design calculations, hydraulics/hydrology reports, geotechnical/foundation reports, foundation investigation and recommendations, scour analyses reports, load rating and analyses for the bridge inspection file (emergency vehicles (where applicable), 3 South Dakota trucks & 4 special haul vehicles (SU4-7) and notional rating load), Construction Management Plan, and specifications sealed and signed by a professional engineer licensed in the State of South Dakota;

   j) After receipt of SDDOT letting authorization, advertise the project for bids, and conduct bid letting;

   k) Obtain SDDOT concurrence in the bid;

   l) Enter into a construction contract and send a copy to SDDOT;

   m) Issue the contractor a Notice to Proceed and send a copy to SDDOT;
n) Select a construction engineer and enter into an agreement for CE services which shall include an initial NBI inspection and send a copy to SDDOT;
o) Pay contractor and consultants in accordance with their contracts with LPA;
p) Request reimbursement from SDDOT for eligible expenses based on certified pay application forms; and
q) Provide SDDOT with construction change orders, copies of tests and certifications, and notification of completion of project.

2. The SDDOT will:
a) Review and offer comments on structure sheets that show the general drawing, plan/profile and scour measures;
b) Review and offer comments on plans, design calculations, independent design calculation checks, scour analyses, load rating and analyses for the bridge inspection file [emergency vehicles (where applicable), 3 South Dakota trucks & 4 special haul vehicles (SU4-7) and notional rating load], specifications, costs estimates, and bid documents as applicable to the project;
c) Concur in bid award, if SDDOT deems it appropriate to do so;
d) Reimburse LPA for eligible expenses in accordance with the terms and conditions of the grant agreement, and
e) Review and offer comments on Construction Management Plan for construction testing and inspection.

VIII. Reimbursement Process

For BIG funding for Preliminary Engineering Grants the SDDOT will bill the LPA for its cost share monthly or quarterly, depending on the volume of work being performed. The LPA cost share will be 20%, unless a different percentage is approved by the Transportation Commission. Eligible costs include SDDOT staff time for preliminary engineering, which will be deducted from BIG reimbursements or billed to the LPA. SDDOT staff time for all preliminary engineering activities would not be included in the grant amount and the required 20% match to the BIG Funds will be paid by SDDOT.
For Preservation Projects and Major Rehabilitation/Replacement Projects, upon receipt of copies of the signed construction contract between the LPA and the contractor and the signed construction engineering contract between the LPA and its construction engineering consultant, the SDDOT will issue payment to the LPA for 75% of the BIG share of the cost of construction and construction engineering for the project. The BIG share will be 80% of eligible items, unless a different percentage is approved by the Transportation Commission. Unless specified differently in the funding agreement, the second and final payment for any remaining eligible grant funds will be reimbursed upon receipt of all Construction Change Orders, contractor final pay requests, and copies of all eligible consultant engineering invoices. SDDOT staff time for all preliminary engineering activities would not be included in the grant amount and the required 20% match to the BIG Funds will be paid by SDDOT.

IX. Sign
Each BIG grant bridge project will be signed with signs as shown in Appendix E. The cost of furnishing and installing the signs is a project expense that may be eligible for BIG reimbursement.

X. Application Submittal
Applications must be submitted to the SDDOT’s sftp site or e-mailed to Colton Stahl at colton.stahl@state.sd.us unless a different e-mail address is designated by SDDOT. If applications are deposited on the state sftp site, e-mail notification must be sent to Colton Stahl. Any requests for deviations from the Procedures must be submitted in writing prior to application deadlines.

Applications for PE grants are due by August 1 of each year. Applications for Preservation, Rehabilitation, and Replacement Grants are due January 2 of each year. Pre-applications for Preservation grants, if submitted, are due by September 1 of each year.

Multiple grant application submittals must be separated into individual pdf files with a limit of
one bridge per application.

XI. Grant Management

The SDDOT Local Government Engineer is responsible for managing the program and making decisions not specifically addressed in this procedure.
Appendix A:
Survey and Hydraulic Work Order Requirements - A2 thru A6
Type, Size, and Location (TS&L) Reports – A7 thru A11
Foundation Investigation (Bridges – Ex. 3) – A12 thru A15
Undercut Recommendation (Boxes/Pipe – Ex. 4) – A16

Examples Include:
Preliminary Hydraulic Data Sheet – A17 thru A18
Plan/Profile Sketches and Gradelines – A19 thru A24
Drainage Data Sheet and Contour Map – A25 thru A26
Photo Documentation and Record Search – A27 thru A30
1. **Field survey for completion of the Drainage Data Sheet and Contour Map.** The information required for placement on these sheets is listed below. An example is attached containing the required information.
   - Stationing from south to north or west to east.
   - Beginning and ending stations of the current structure.
   - Proposed and inplace gradelines.
   - Stream profile. (Including a table of stations and elevations for each shot taken.)
   - Sea level datum is required. Stations, elevations, and offsets from and descriptions of permanent objects will be required for project benchmarks. (The High Accuracy Reference Network (HARN) map and the County Bench Mark map for the State of South Dakota can be found at the following web site – [https://dot.sd.gov/doing-business/engineering/design-services/surveyors](https://dot.sd.gov/doing-business/engineering/design-services/surveyors))
   - Include an electronic file containing the plan/profile of the inplace gradeline at the structure.
   - Landowners with their addresses, phone numbers, and location of property.
   - Utilities with their addresses, phone numbers, and locations along the project.

2. **Field survey as necessary for preparation of construction plans.** Required information is listed below.
   - Establishment of transit points, land ties and benchmarks as well as cross sections and topography. (Stations, elevations, and offsets from permanent objects will be required for project benchmarks.)
   - Project limits as established by consultation with the County Highway Superintendent / City Engineer.
   - Additional legal survey as required for preparation of right-of-way plats.
   - The geometrics of horizontal and vertical alignment in accordance with the Local Roads Plan design standards.
   - Survey notes are to be retained on file with the Consultant for subsequent use in the preparation of construction plans and are to be available to the County/City upon request.

   It is anticipated that this item will permit the issuance of a separate work order (after the Type, Size and Location (TS&L) Inspection) for the development of construction plans with no further survey needed.

3. **Photo Documentation and Record Search of the Structure as defined in Attachment #2.**

4. **Preliminary Hydraulic Data Sheet, Plan/Profile Sketches (Preliminary Hydraulic Layouts) and gradelines, Electronic Copy of the Hydraulic Model, Draft Hydraulic Design Report in accordance with the newest version of the South Dakota Drainage Manual, and cost estimates for existing and all proposed structure alternatives.** (More than one feasible alternative is required. This includes options on different alignments if applicable. The options need to be acceptable to the owner’s future needs and maintenance capabilities. If there is only one type of structure that can reasonably be constructed at a site, simply provide an explanation instead of alternatives.) The newest version of the South Dakota Drainage Manual is available at the following location: [https://dot.sd.gov/doing-business/engineering/design-services/forms-manuals](https://dot.sd.gov/doing-business/engineering/design-services/forms-manuals). Guidance and examples can be found in Chapter 6 of the manual. The current preliminary hydraulic data sheet to be used can be found in the folder under “000 LGA General Info and Docs” located on the Consultant’s LGA SFTP site. Directions for filling out the form can be found at the same location. All items will be submitted to the Local Government Assistance Office for distribution to SDDOT personnel for review for compliance with minimum required State and Federal standards. Necessary revisions shall be provided in writing by the SDDOT and shall be forwarded to the Consultant by the Local Government Assistance (LGA) Office. Necessary revisions shall be completed by the consultant and the Revised Draft Hydraulic Design Report submitted within 2 weeks of receipt of revisions from LGA. The Consultant is wholly responsible for the accuracy of the design calculations and the independent check design calculations.

BIG Procedure Appendix A-2
Note for Box Culverts/Pipe Options and Plans: The Corps now requires all culverts/pipe where aquatic organism transport is present to have a flow line sunk 1’. If a box/pipe is included in the options, it should be clearly noted that the flowline has been sunk to the required 1’. If the selected structure is a box culvert or pipe, project plans and the final hydraulic data sheet should show that the box or pipe has been sunk to the required 1’.

5. Conduct TS&L inspection, assistance in the selection of the type, size and location of the replacement structure, and preparation of TS&L summary letter (See Examples #1 & #2 following the attachments). The county or city (owner) shall be in attendance and advance notice given the Local Government Assistance Office so if time allows, a staff member can attend.

6. Report of Foundation Investigation. Conduct field investigation and provide design recommendations according to AASHTO LRFD Bridge Design Specifications Section 10. Report shall include boring information, lab results, and design recommendations. See Examples #3 and #4, following the attachments, for reports that are typically developed by SDDOT Geotechnical Engineering Activity.

7. Obtain Traffic Data. Conduct field study to obtain 24-hour traffic volumes for existing structure. Data shall be gathered using a mechanical or electronic device. Study shall be conducted on a typical weekday (Tuesday-Thursday) from midnight to midnight. Report of traffic data shall include structure number, counter brand, serial number, date collected, and total volume.

8. For Structure Chosen at TS&L: Final Hydraulic Design Report, Final Hydraulic Data Sheet (use the current data sheet found in the folder “000 LGA General Info and Docs” located on the LGA SFTP site,) Hydraulic Model with existing and proposed conditions, and if the structure selected is a bridge, Scour Memo summarizing hydraulic scour calculation, Scour Calculation, and Berm Slope Protection Recommendations (if applicable.)

Please refer to the checklist in Attachment #1 for the TS&L Packet of items that shall be submitted to the Local Government Assistance Office.
Local Bridge Improvement Grant (BIG) Procedure

Attachment #1
Bridge Improvement Grant
Checklist for Survey and Hydraulics Work Order TS&L Packet

These items must be submitted to DOT/Local Government Assistance. If any of these items are missing, the full packet will be returned for completion and resubmission to this office.

Project Number ___________________________ County ___________________________ PCN _______

☐ Survey Sheets and Contour Map including the following information:
  - Stationing from south to north or west to east
  - Beginning and ending stations of the existing structure
  - Beginning and ending stations of proposed structures
  - Proposed and existing gradelines
  - Stream profile and cross sections (Downstream to upstream direction including a table showing stations and elevations for each shot taken)
  - Elevation and location of buildings and other structures
  - Survey information using sea level datum and showing station, elevation, offset, and physical description of each project benchmark
  - Landowner names, addresses, phone numbers, and legal descriptions of their property
  - Utility names, addresses, phone numbers, and locations along the project

☐ Photo Documentation and Historical Record Search of the Structure (including list of files or repositories searched) as defined in Attachment #2. (In the event that nothing is found, a letter indicating lack of findings, along with files or repositories searched, shall be submitted to the SDDOT/Local Government Assistance Office.)

☐ Preliminary Hydraulic Data Sheet (use current data sheet found in the folder “000 LGA General Info and Docs” located on the LGA SFTP site) including the following information:
  - Calculated flows
  - Inplace conditions (Ordinary High Water Elevation, HW100, Vmax, OTfr)
  - Proposed conditions for each option (HW2, HW25, HW100, Vmax Qot, OTfr, ELoverTop)
  - Ordinary High Water Elevation Shown on Cross-Sections (vegetation elevation on stream banks – approx. 2-year flow)
  - Observed High Water Elevation (identifiable high water mark)

☐ Electronic copy of Hydraulic Model of existing and proposed conditions

☐ Plan and profile sketches (preliminary hydraulic layout sheets) for the existing structure and proposed gradelines for each option (More than one feasible alternative is required. This includes options on different alignments if applicable. The options need to be acceptable to the owner’s future needs and maintenance capabilities. If there is only one type of structure that can reasonably be constructed at a site, simply provide an explanation instead of alternatives.)

Local Bridge Improvement Grant (BIG) Procedure

Attachment #2
Local Government Assistance

Photo Documentation and Record Search of the Structure

The information defined below will satisfy one of the requirements of the State Historic Preservation Society in clearing the structure for removal.

Photo Documentation of the Structure

☐ Site map and photo log of all photos
☐ Photos will be taken of: (at minimum)
  • Full views of the structure’s primary elevations
  • Close-ups of any decorative, character-defining or structural features
  • General views of the bridge and its environment
☐ Photos will be labeled as follows:
  • Photo Number - from photo log and site map
  • Name and Address of property – if property does not have legal address then please note either the Universal Transverse Mercator (UTM) or the legal location down to the quarter section.
  • Month and Year of photograph
  • Description of view, including camera direction (cardinal direction – N, S, E, W)
☐ Photos will be submitted in one of the following formats:
  • Digital Photographs
    • At least 2000 X 3000 pixels at 300 dpi
    • Saved as TIFFs submitted on CDs
  • 35mm Black and White Photographs
    • 35mm black/white film printed on black/white photographic paper
    • Both prints and negatives submitted

Historical Record Search of the Structure

☐ Any or all of the following are needed:
  • Reports – maintenance or otherwise indicating modifications to the original structure – what was done and why
  • Any Photographs of the original structure (not inspection photos; not photos referenced in this work order)
  • Original Drawings
  • Original Plans
  • Any other documentation

☐ Names of Files or Repositories (courthouse, county historical society, etc.) Searched

If possible, provide the original copy of this information. If not, submit the information in the following format. High quality clear Xerox copies of any reports, drawings, or plans; and photographs scanned at 600 dpi, saved as TIFFs, and submitted on a CD.

If these documents are not otherwise restricted through state or federal law; submit them to the SDDOT/Local Government Office for submission to the South Dakota State Historical Society for public use and reproduction. In the event that nothing is found, a letter indicating lack of findings, along with files or repositories searched, shall be submitted to the SDDOT/Local Government Assistance Office.
DATE
ADDRESS BLOCK

RE: BR_###(00), COUNTY OR CITY, PCN STRUCTURE NUMBER, LOCATION

Dear NAME:

A Type, Size, and Location inspection was held on DATE, for the above referenced project. The following personnel were in attendance:

ATTENDEE NAMES, TITLES

The following items were discussed and agreed upon by the inspection participants:

The most applicable structure for this site, based on numerous items discussed during the inspection, is a 63’ 1 span precast channel bridge with a 24’ deck (22’ clear width) and a 30° LHF OR RHF skew.

IF LESS THAN 28’ CLEAR ADD THE FOLLOWING SENTENCE The county has selected a narrower width than the minimum standard as they have no intention of widening the roadway in the future ensuring the structure will not end up being a hazard by being narrower than the roadway.

Crown slope of the structure shall be 0.02 ft/ft. The substructure shall consist of steel pile abutments. (Also note bent type if known – such as 2-column bents, etc.) The bridge location will be shown on the Final Hydraulic Data Sheet and will be centered at approximately station 10+00. T101 OR T115 OR SL1 steel rail OR Concrete barrier meeting MASH TL-3 (32") will be shown in the plans.

Approach rail will OR will not be needed. Fence anchor eyes will OR will not be provided.

The Contractor will remove and dispose of the existing structure. OR The Contractor will remove and dispose of the existing structure with the exception of the following items to be salvaged for the County OR City: beams, wood planks, and railing. This shall be noted in plans for bidding purposes. Remaining materials shall be disposed of by the Contractor. The abutments and bents shall be removed to 1’ below flowline.

The road will be closed during construction with no detour necessary. OR An onsite detour on the DIRECTION side of the structure will be shown in the plans.

Project limits will run from approximately 100’ north to 100’ south of the structure. The current grade shall be maintained. The typical section will include a crown slope of 0.04 ft/ft (MAY VARY FOR COUNTY) for gravel surfaces OR 0.02 ft/ft for paved surfaces, 4:1 inslopes, 5:1 backslopes, and a standard 10’ ditch at 20:1. The approach subgrade shall taper from the structure to match the existing subgrade. The surfacing will consist of gravel OR asphalt, which will be furnished and installed by the County OR City. Clear zone for this site has been set at 10’ as per the AASHTO Guidelines for Geometric Design of Very Low-Volume Local Roads OR ___’ as per Table 3.1 of the AASHTO Roadside Design Guide. Unless otherwise noted, all design data for the project will meet the current design speed for the roadway which is ## mph.
No channel change and no channel cleanout will be necessary at this site. OR No channel change will be necessary at this site. Some channel cleanout of trees and/or brush will be necessary to the northeast and southeast.

The Consultant will provide erosion protection recommendations with the Final Hydraulic Data Sheet. The southwest bank will need to be built up and protected with riprap. (Note location of any out-of-the-ordinary need for riprap and reason why.)

Specific project notes for this project are attached. (ADD ANY PROJECT SPECIFIC NOTES AS ATTACHMENT TO THIS MEMO.)

The Contractor will be responsible for traffic control, topsoiling, and seeding.

The County OR City will be responsible for the following items without Grant Participation:

1) Right of way and temporary and permanent easements
2) Coordination of any utility adjustments
3) Furnish and install final surfacing
4) Furnish and install temporary and/or permanent fencing
5) Remove silt fence in permanently seeded areas

The SDDOT Geotechnical Engineering Activity is requested to provide foundation and backfill recommendations by DATE (12-18 months from letter date). Debris and ice are a known concern at this site. OR Debris and ice are not a concern at this site.

The Consultant will provide the name, address, and phone number of adjacent landowners. Utility Company contact information is also needed in the plans for any utilities that exist within the project area. The DOT Local Government Office (DOT LET) OR the County OR City (LOCALLY LET) will initiate the 404 permit and other related environmental clearances and will provide the Consultant with materials recommendations if needed.

The Consultant will outline and number the archeological sites on the roadway plan sheet. These sites are located within ____ mile of the structure and cannot be disturbed. Notes stating this shall be placed in the plans and are located with the other project specific notes. These sites will only be labeled in the plans as “Environmentally Sensitive Site #1, 2, 3,” etc. No specific identification numbering from SHPO shall be used in the plans to protect these sites from scavenging. THIS ONLY APPLIES IF SHPO STATES THAT SITES HAVE BEEN FOUND AND MUST BE AVOIDED. DELETE IF NOT NEEDED.

The letting date will be determined later as it depends on whether this project will be let with local funding or a successful award of a Bridge Improvement Grant for Replacement.

If there are any questions or comments please contact me at NUMBER.

Sincerely,

NAME
TITLE

Attachment – Drainage Data Sheet & Contour Map for Existing Site & Plan/Profile for Selected Option

CC: COUNTY/CITY – CONTACT NAME
LGA – CONTACT NAME

BIG Procedure Appendix A-8
Dear NAME:

A Type, Size, and Location meeting was held on DATE, for the above referenced project. The following personnel were in attendance:

ATTENDEE NAMES, TITLES

The following items were discussed and agreed upon by the inspection participants:

The most applicable structure for this site, based on numerous items discussed during the inspection, is a 5 barrel 12' X 5' cast-in-place OR precast RCBC with a 0° RHF OR LHF skew, and 0° flared wingwalls at the inlet & 0° flared wingwalls at the outlet. (REMOVE IF NOT NEEDED.) As debris and ice are a known concern at this site the center wall(s) will be extended on the inlet. Cutoff wall is to be extended 6" below the recommended outlet protection. The new structure will be centered at approximately sta. 10+07. Fence anchor eyes will OR will not be required at this site. The thickness of the bottom slab shall be the same or greater than the thickness of the top slab.

The flowline of the box culvert and riprap to be submerged a minimum of 1’ to aid in fish passage. This needs to be documented both on the final hydraulic data sheet and on the structure, general drawing plan sheet. OR This location is environmentally sensitive due to the presence of the Topeka Shiner; therefore, the box culvert and riprap will need to be submerged 6" below the flowline to aid migration of the Shiner during its spawning period. This needs to be documented both on the final hydraulic data sheet and on the structure, general drawing plan sheet. (TOPEKA SHINER SITES NEED TO BE SPECIFICALLY MENTIONED TO INDICATE TO ALL THAT THEY HAVE BEEN IDENTIFIED AT THE SITE AND ACCOMMODATIONS WILL BE MADE.)

The Contractor shall remove and dispose of the in-place structure. ADD SPECIFIC SALVAGE ITEMS AS NEEDED - The Contractor shall salvage the beams, wood planks, and railing for the County, which shall be noted in the plans for bidding purposes. The abutments and bents shall be removed to 1’ below flowline.

The project limits shall be from approximately 150’ south to 150’ north of the structure. The road will be closed with no detour necessary. Only local traffic will be allowed access. OR An onsite detour on the DIRECTION side of the structure will be shown in the plans.
The typical section will include a crown slope of 0.04 ft/ft (MAY VARY PER COUNTY), 4:1 inslopes, 5:1 backslopes, and a standard 10’ ditch at 20:1. The surfacing will consist of gravel, which will be furnished and installed by the County. The approach subgrade will taper into the existing. **(IF EXISTING FINISHED SURFACE MEETS OR EXCEEDS LRP MIN. OF 24’) The length of box shall accommodate the finished surface width of 24’ which will match the existing finished surface width.** OR The length of box shall accommodate the finished surface width of ___’ to ensure the box openings remain outside the clear zone when the roadway is widened. **(OR IF FINISHED WIDTH WILL BE LESS THAN 24’ MIN.)** The length of box shall accommodate a finished surface width of __’. Although this is narrower that the minimum finished surface width the county has no intention of widening the roadway in the future so the box openings will remain safely outside the clear zone. Clear zone for this site has been set at 10’ as per the AASHTO Guidelines for Geometric Design of Very Low-Volume Local Roads OR __’ as per Table 3.1 of the AASHTO Roadside Design Guide. Clear zone is measured from the edge of the traveled way (finished surface) to the inside of the parapet of the box. Unless otherwise stated, all design data for the project will meet the current design speed of the roadway which is ___mph.

The typical section will include a crown slope of 0.02 ft/ft, 4:1 inslopes, 5:1 backslopes, and a standard 10’ ditch at 20:1. The surfacing will consist of asphalt, which will be furnished and installed by the County. The approach subgrade will taper into the existing. **(IF PROPOSED MEETS OR EXCEEDS LRP MIN. LANE WIDTH OF 12’ AND LRP MIN. SHOULDER WIDTH OF 2’) The length of box shall accommodate 2-12’ driving lanes and 2-2’ shoulders to match existing roadway. OR The length of box shall accommodate 2-__’ driving lanes and 2-__’ shoulders to ensure the box openings remain outside the clear zone when the roadway is widened.** (OR IF FINISHED LANES/SHOULDERS WILL BE LESS THAN MIN.) The length of box shall accommodate 2-__’ driving lanes and 2-__’ shoulders. Although this is narrower than the minimum roadway cross section, the county has no intention of widening the roadway in the future so the box openings will remain safely outside the clear zone. Clear zone for this site has been set at 10’ as per the AASHTO Guidelines for Geometric Design of Very Low-Volume Local Roads OR __’ as per Table 3.1 of the AASHTO Roadside Design Guide. Clear zone is measured from the edge of the traveled way (driving lanes) to the inside of the parapet of the box. Unless otherwise stated, all design data for the project will meet the current design speed of the roadway which is ___mph.

The Consultant will provide inlet and outlet recommendations on the Final Hydraulic Data Sheet. The inlet & outlet protection shall be riprap. Inlet & outlet aprons shall be concrete. OR At landowner request the aprons will be riprap to prevent cattle from walking through the box culvert. Any further inlet & outlet protection shall be riprap. (Any extra riprap needed? If so, where and why?)

No channel change and no channel cleanout will be necessary at this site. OR No channel change will be necessary at this site. Some channel cleanout of trees and/or brush will be necessary. A temporary diversion channel will be installed south of the structure.

The Contractor will be responsible for traffic control, topsoil stripping, and seeding.

The County OR City will be responsible for the following items without Grant Participation:

1) Right of way and temporary and permanent easements  
2) Coordination of any utility adjustments  
3) Furnish and install final surfacing  
4) Furnish and install temporary and/or permanent fencing  
5) Remove silt fence in permanently seeded areas

The SDDOT Geotechnical Engineering Activity Office is requested to provide undercut recommendations by DATE (6 months from letter).
Local Bridge Improvement Grant (BIG) Procedure

The Consultant will provide names, addresses, and phone numbers of the adjacent landowners. Utility Company contact information is also needed in the plans for any utilities that exist within the project area. **(FOR DOT LET PROJECTS)** The DOT Local Government Office **OR (FOR LOCALLY LET PROJECTS)** The County OR City will initiate the 404 permit and other related environmental clearances and will provide the consultant with materials recommendations.

The Consultant will outline and number the archeological sites on the roadway plan sheet. These sites are located within ____ mile of the structure and cannot be disturbed. Notes stating this shall be placed in the plans and are located with the other project specific notes. These sites will only be labeled in the plans as “Environmentally Sensitive Site #1, 2, 3,” etc. No specific identification numbering from SHPO shall be used in the plans to protect these sites from scavenging. **THIS ONLY APPLIES IF SHPO STATES THAT SITES HAVE BEEN FOUND AND MUST BE AVOIDED. DELETE IF NOT NEEDED.**

The letting date will be determined later as it depends on whether this project will be let with local funding or a successful award of a Bridge Improvement Grant for Replacement.

If there are any questions or comments please contact me at **NUMBER**.

Sincerely,

REPORT OF FOUNDATION INVESTIGATION

PROJECT: BRO 8048(03) Mellette County PCN 02DY

LOCATION: Structure No. 48-102-010, 18.9 miles North & 0.8 miles West of Cedar Butte over the White River.

METHOD OF INVESTIGATION:

All soundings are made according to the Standard South Dakota Subsurface Investigation Techniques and AASHTO Specifications. Auger holes are drilled with a 4-1/2 inch continuous flight auger. Penetration and Push Test holes are drilled with a 6-5/8 inch continuous hollow stem auger. Push core samples are obtained by hydraulically ramming a 2 foot long lined split spoon sampler into the soil to obtain 2 inch nominal diameter soil samples. Penetration tests are conducted by dropping a 140 pound hammer 30 inches to obtain 2 inch nominal diameter samples and to measure the resistance to penetration of the soil. Corings with the SDDOT drive rig are performed by using a California retractable plug sampler, which is driven with a 490 pound hammer. The drill stem is P.K. rod, which is 2-7/8 inch O.D., and 2 inch nominal diameter cores are obtained. All laboratory tests are performed in accordance with standard AASHTO or SDDOT laboratory procedures.

RECOMMENDATIONS:

Abutments:
  I. Steel HP10 X 42 Piling
     A. A LRFD maximum factored pile bearing resistance of 77 tons can be used for design.
     B. The anticipated tip elevations are:

     | Station | Elevation |
     |---------|-----------|
     | 22+06   | 1910      |
     | 25+27   | 1892      |

     C. The nominal pile bearing resistance shall be 192 tons verified by the SDDOT’s Modified ENR formula.

Bents:
  I. Drilled Shafts
     A. A LRFD maximum factored resistance value of 2,800 psf can be used for design below elevation 1912 ft. or maximum scour whichever is lower.
     B. Permanent casings will be required to elevation 1915 ft.
     C. The point of fixity within the bedrock can be assumed to be the elevation 1912 ft.

DISCUSSION:

The proposed structure location is underlain by brown sand-silt (alluvium) overlying brown silt-sand with gravel (alluvium). The alluvial sediments rest upon gray silt-clay (Pierre Shale). The D50 of the brown sand-silt, brown silt-sand with gravel, and gray silt-clay (Pierre Shale) can be assumed to be 0.06 mm, 1.0 mm, and 0.004 mm. The D95 of the brown sand-silt, brown silt-sand with gravel, and gray silt-clay (Pierre Shale) can be assumed to be 1.0 mm, 6.0 mm, and 0.06 mm.

Steel HP10X42 piling along with the anticipated tip elevations, are listed in the recommendations for use in the abutments. Drilled Shafts are listed in the recommendations for use at the bents.

The piling were evaluated for drivability and group effects at the LRFD Strength Limit State. Settlement of the substructure units and horizontal movement of the abutment piling were evaluated at the LRFD Service Limit State.

Drivability –
A drivability analysis was performed for the steel HP10X42 piling using the wave equation analysis program (GRLWEAP). A group of pile hammers that were evaluated and found to produce acceptable driving stresses is listed later in this report for inclusion in the plans.

Pile Group Effects:

Axial Loading –
Abutments
For a single row of piling, AASHTO requires the center-to-center pile spacing to be at least 30” or 2.5 times the width of the pile, whichever is greater. Therefore, for the steel HP10x42 piling at the abutment the center-to-center spacing shall be at least 30”.

Settlement –
The steel pile tips will be founded in the Pierre Shale. Unconfined compression test results of the Pierre Shale exceed the proposed bridge loadings. Past experience for piling driven into hard shale soil bedrocks has shown little, if any, settlement has occurred. Therefore, 1/4 inch or less of total settlement can be used to design the substructure units.

Horizontal Movement –
AASHTO states that if the center-to-center spacing of the piling in the substructure unit is greater than 5 times the width of the pile then group effects can be ignored. Therefore, if the designed spacing is greater than 5 times the pile width a group efficiency factor of 1.0 can be used with no reduction in pile loading required. If this minimum pile spacing is not met a reduction factor will need to be calculated according to the AASHTO code.

Horizontal movement at the substructure units can be calculated using the following soil parameters:

- Sand-silt (alluvium); phi angle = 24 degrees, cohesion = 50 psf, wet unit weight = 118 pcf
- Silt-sand with gravel (alluvium); phi angle = 32 degrees, cohesion = 0 psf, wet unit weight = 130 pcf
- Silt-clay (Pierre Shale); phi angle = 18 degrees, cohesion = 1,000 psf, wet unit weight = 130 pcf

For the drilled shafts, a LRFD maximum factored resistance value (skin friction) of 2,800 psf is recommended below elevation 1912 for the bents or maximum scour whichever is lower. The point of fixity within the bedrock can be assumed to be 1912 for the bents.

Each drilled shaft shall have a minimum of 3 access tubes for a shaft diameter of 3.0’ and less. The number of access tubes needed shall be increased by 1 for each foot increase in shaft diameter above the 3.0’. The access tubes shall be furnished and installed according to the South Dakota Department of Transportation’s 2004 Standard Specifications for Roads and Bridges. These access tubes shall be equally spaced in the shaft reinforcement prior to placing the reinforcement cage.

A representative of the CONSULTING FIRM (NAME AND NUMBER) shall be present during drilling operations to confirm the elevations provided in this report and to observe the placement of the drilled shafts. In addition to the notes below, contact the CONSULTANT REPRESENTATIVE for the most current drilled shaft construction notes to be included in the plans.

The following notes shall be placed in the plans:

A drivability analysis was performed using the wave equation analysis program (GRLWEAP). The pile hammers listed below were evaluated and found to produce acceptable driving stresses. Pile hammers not listed will require evaluation and approval prior to use from the CONSULTANT REPRESENTATIVE NAME AND PHONE NUMBER.

Hammers need to be sized according to site specific soil parameters and structure design requirements. The following list of hammers is owned and readily available by contractors that do work in SD. Select and specify in the report which hammers are acceptable for use on individual projects.

Pierre Shale is a marine shale with a textural classification that varies from silt-size to clay-size. Color varies from buff-grey to black. The formation may contain corrosion zones that are normally thin but occasionally are massive. These zones may be identified by the presence of alteration products (silica). Intraplate Pierre Shale is considered to be "Soft Rock".

Penetration tests are conducted by dropping a 140 pound hammer 30 inches to obtain 2 inch nominal diameter samples and to measure the resistance to penetration of the soil.

The Geotechnical Engineering activity has on file all of the project plans for this project. These plans and additional results of laboratory tests, if any, are available for review at the Central Office in Pierre.

RECOMMENDATIONS

Re: BRO 8027(29), Gregory County, PCN 00QR
Str. No. 27-030-081, located 2.0 West & 0.1 South of the Jct of SD44/SD47
RCBC Undercut Recommendation

Soils maps of the area indicate the soils at the location of the proposed structure have the following characteristics.

Station 16+86 (Str. No. 27-030-081)

CLASSIFICATION: A-7
Clay & Silty Clay
AVERAGE LIQUID LIMIT: 66
SHRINK-SWELL POTENTIAL: High to Very High
FROST ACTION POTENTIAL: Low
CORROSIVITY: High for steel, Low to Moderate for concrete

RECOMMENDATIONS:

Provide 24 inches of undercut and backfill.

DISCUSSION:

The project consists of replacing an existing single span 22’ steel stringer bridge with a 2 barrel 13’ x 6’ cast-in-place RCBC. The proposed box culvert will be in the same location as the existing bridge location. The existing surfacing on the road is gravel and will be resurfaced with gravel upon completion. Minimal grading at the proposed box culvert location is anticipated, therefore, the material shall be compacted using the Ordinary Compaction Method.

A subsurface investigation was conducted for the proposed RCBC. The subsurface investigation consisted of placing a boring near both the proposed inlet and outlet ends of the structure and logging the material to 3 feet below the flow line. Samples were collected from below the flow line for soils classification. A dynamic cone penetrometer was used at both the inlet and outlet ends to identify the change in relative density of the subsurface material below flow line.

Subsurface soils at the proposed site consist of brown silt-clay to 3’ below the existing flow line.

The 2’ undercut depth is recommended to remove the low strength soils with high shrink-swell potential from below the box culvert.

The following paragraphs shall be placed in the plans:

Compaction of earth embankment and box culvert backfill material shall be governed by the Ordinary Compaction Method.

Any questions about the recommendations or the subsurface conditions can be directed to the CONSULTANT CONTACT NAME AND PHONE NUMBER.

**Type:**
- I. Berm Type Bridge
- II. RCBC w/30' Flared Wing walls at Inlet and 0° Flared at Outlet
- III. Precast CBC with 0° Flared Wing walls at Inlet and Outlet

**Size:**
- I. 82.0 ft. (single span with 45 M Section)
- II. 4-10’x10’ (effective opening 4-10’x9’)
- III. 4-11’x10’ (effective opening 4-11’x9’)

**Proposed Location:**
- I. Center at Sta. 23+26, berm toes located at Sta. 23+12± (elev. 1274.0) & Sta. 23+40 ± (Elev. 1274.0)
- II. Center at Sta. 23+37  III. Center at Sta. 23+37

**Notes or Remarks:**
- Discharges were obtained from Methods Outlined in Water Resources Report 98-4055 for ungaged sites near a gaging station on the same stream. Stream gage # 06478260 for years of record from 1956-1978. Q₂ = 91 cfs; Q₂₅ = 1979 cfs; Q₁₀₀ = 4997 cfs; Q₅₀₀ = 11,811 cfs. Structure width and flowline elevation for the box culvert options meet the criteria called for in the US Army Corp. of Engineers 2012 Regional Conditions for aquatic organisms.

**INPLACE CONDITIONS:**
- Q₂ Elev. = 1275.0, HW₂₅ = 1281.8, HW₁₀₀ = 1286.9 ***Overtop Freq. = Q₂₅ = 4500 cfs, Vₘₐₓ = V₅₅ = 9.1 fps
- PROPOSED CONDITIONS: I. Q₂ Elev. = 1274.9, V₂ = 2.8 fps, HW₁₀₀ = 1284.8, ***Overtop Freq. = Q₂₇₄ = 8000 cfs, Vₘₐₓ = V₁₀₀ = 11.7 fps
- II. Q₂ Elev. = 1274.4, (Q₂ Depth =1.1 ft. and V₂ = 2.1 fps at culvert outlet), HW₁₀₀ = 1287.2, ***Overtop Freq. = Q₁₈₅ = 6450 cfs, Vₘₐₓ = V₁₀₀ = 13.9 fps
- III. Q₂ Elev. = 1274.4, (Q₂ Depth =1.1 ft. and V₂ = 1.9 fps at culvert outlet), HW₁₀₀ = 1287.2
- ***Overtop Freq. = Q₁₈₀ = 6400 cfs, Vₘₐₓ = V₁₀₀ = 12.6 fps

**Additional Remarks:**
- *Elevation of the Stream flowline at the centerline of the proposed roadway. The box culvert flowline has been lowered 12” below stream flowline and this embedded depth is assumed to not convey any water.
- **Minor channel shaping will be required at channel inlet and outlet.
- ***The existing roadway overtops at Elev. 1286.23 near Sta. 23+75 and the proposed gradeline overtops at Elev. 1290.8 at Sta. 23+50.

Δ Hutchinson County is participating in NFIP.

* The area is not mapped and is considered NSFHA (No Special Flood Hazard Area)

**PRELIMINARY X ➔ FINAL**

**SCOUR RECOMMENDATIONS:**
- I. Riprap will be required on both bridge berms. Foundation Report has not been received. Contraction Scour for proposed bridge is estimated at 6.0 ft. for the 100 year event. Scour estimate is based on assumed D₅₀ = .2mm. II & III. Provide 33 in. thick Class B riprap on newly graded 2:1 bank slopes from elev. 1280.0 down to culvert.

Flowline and across channel at outlet. Extend riprap 18.0 ft. downstream of wings. Provide Type B drainage fabric beneath all riprap.

Natural Stream bed material will not need to be placed over riprap and culvert invert.

* Vertical Datum Used: NAVD 88: X NGVD 29: ☑️ Unknown: ☑️
* Topeka Shiner Stream: Yes ☑️ No ☑️
* Community Participating in NFIP Program: Yes ☑️ No ☑️
* Site in Identified NFIP Floodplain: Yes ☑️ No ☑️

The Hutchinson County Assessor, Tony Dewald, was contacted on May 25th, 2015 by Diane Murtha. Murtha reported that Dewald had not found any information regarding the structure.

The Hutchinson County Auditor, Diane Murtha, was contacted on May 6th, 2015 by email. Murtha noted that she had not found any information regarding the structure. She also noted that she had talked to the Department of Equalization and the Register of Deeds, neither of which could provide information about the structure.

The Hutchinson County Highway Superintendent, Joel Baumiller, was contacted on May 6th, 2015 by email. Baumiller then responded by phone that same day and was not able to provide information other than the inspection reports that we (FIRM) already had. The reports provided the approximate date of completion of the structure (1925) as well as information specific to the construction and condition of the structure. The inspection report is attached.

The Hutchinson County Register of Deeds, Unknown, was contacted on May 25th, 2015 by Diane Murtha. Murtha reported that the Register of Deeds had not found any information regarding the structure.

The Hutchinson County Treasurer, Tamara Miller, was contacted on May 6th, 2015 by email. Miller has not yet responded.

The Heritage Hall Museum and Heritage Hall Archives, run by Kelsey Orman, were contacted on May 25th, 2015 by email. Orman reported that she had not found any information regarding the structure.

The State Historic Preservation Office’s CRGRID was also used to find any historic survey’s conducted on the structure. It revealed the structure was Surveyed in 2004. The survey summary and report are attached.

Historic District Rating:
Significance Notes: This bridge retains historic integrity, although it has minor condition problems due to collision damage. It is a good example of pre-World War II steel stringer bridge construction in South Dakota, reflecting both the history and technology of such projects. Bridge 34-140-096 is eligible for listing in the National Register of Historic Places under criterion C, as an example of the steel stringer type for the Depression period.

Altered/Moved Notes: 

Physical Notes: This structure is a two span steel stringer bridge that carries 418th Avenue (paved) over the North Branch of Dry Creek. It is located in rural Hutchinson County about 8.5 miles southeast of Parkston in a region of cultivated fields and rolling grassland. The superstructure consists of 12 steel I-beam stringers supporting a concrete deck. Precast concrete balustrade rails with elliptical openings flank the bridge. A short portion of the south end of the west rail has been damaged by a vehicle collision. Abutments, backwalls, and wingwalls are solid concrete. The intermediate pier is open concrete, consisting of two rectangular (in cross section) vertical posts with a solid, cantilevered cap. Recessed panels bearing the date "1935" are found on the inside of the curbs. Other than the moderate rail damage, the structure remains essentially as-built.

Appendix B – Structure Design Work Order Requirements
Bridge Improvement Grant
Work Order Requirements for Structure Design

SCOPE OF SERVICES TEMPLATE – Design

Category-Specific Technical Requirements & Provisions, from the Current SDDOT Consultant Retainer, Shall Be Applied

1. **Preparation of sketches of the structure as selected during the TS&L.** The Consultant shall submit general drawing sheets, a riprap layout, and plan/profile of the selected option to the Local Government Assistance Office for review at the **START OF DESIGN.** (Not applicable for Bid Ready grants.)

2. **Survey and plans for the above referenced project as described in the TS&L letter and Final Hydraulics Data Sheet, design calculations, independent design check, and load ratings.** Review plans (100% complete) are to be submitted in PDF format. Specifications shall follow the most current edition of the Standard Specification for Roads and Bridges. South Dakota Department of Transportation Bid Items, Standard plates and plan notes, from the SDDOT website, must be used in development of the plans.

   The consultant shall provide design calculations, independent check, and load ratings for the structure as set forth in the Master Retainer Contract. The Consultant is wholly responsible for the accuracy and safe keeping of the design calculations and the independent design check.

3. **Incorporation into the plans of any changes that may be requested in the SDDOT plan review comments or provide written explanation for items not changes.**

4. **Review of shop fabrication drawings as may be required and submittal of the approved shop drawings to the Consultant.** This item is to be completed within two (2) weeks of receipt of shop or fabrication drawings from the contractor and shall be noted accordingly in the plans.

7. **Provide a Construction Management Plan based on SDDOT Materials Manual.** This document must be reviewed by the SDDOT prior to the notice to proceed being issued to the contractor. See **Appendix D** for requirements.

Please refer to the checklist in **Attachment #1** for the items required to be submitted to the Local Government Assistance Office.

**NOTE:** Foundation investigation will need to be included for projects that did not have this work included in the preliminary engineering. See BIG Procedures for direction on whether DOT Foundations or a subconsultant on the Retainer for Geotech Investigation will do this work. See also **Appendix C, Examples #1 and #2** for requirements.
Attachment #1
Local Government Assistance
Checklist for Structure Design Work Order

These items must be submitted to DOT/Local Government Assistance. If any of these items are missing, the full packet will be returned for completion and resubmission to this office.

Project Number ________________ County ________________ PCN ____________

To be submitted at the START OF DESIGN

☐ Plan/profile, general drawing sketches, and riprap layout as selected during the TS&L

To be submitted well in advance of anticipated letting

☐ Review Plans (100% complete & ready for review) in PDF Format
☐ Design calculations, independent design check, and load ratings

To be submitted after SDDOT plan review is complete

☐ All Plan Review Comments must be Addressed and Documented
☐ Final Plans – Electronic PDF file of the engineered, stamped set of plans
☐ Construction Management Plan
Appendix C – Structure Preservation or Rehabilitation Work Order Requirements
**Bridge Improvement Grant**

**Work Order Requirements for Structure Preservation or Rehabilitation**

**Note:** Not all preservation or rehabilitation work will require hydraulic analysis or foundation investigation. For this reason, several of the related items below have been marked “if needed.” If the Subject project does not require hydraulic analysis and/or foundation investigation, simply do not include these items in the breakdown of estimated costs.

**SCOPE OF SERVICES TEMPLATE – Structure Preservation or Rehabilitation**

**Category-Specific Technical Requirements & Provisions,**

*from the Current SDDOT Consultant Retainer, Shall Be Applied*

1. **Field survey for completion of the Drainage Data Sheet and Contour Map.** The information required for placement on these sheets is listed below. An example is attached containing the required information.
   - Stationing from south to north or west to east.
   - Beginning and ending stations of the current structure.
   - Proposed and inplace gradelines.
   - Stream profile. (Including a table of stations and elevations for each shot taken.)
   - Sea level datum is required. Stations, elevations, and offsets from and descriptions of permanent objects will be required for project benchmarks. (The High Accuracy Reference Network (HARN) map and the County Bench Mark map for the State of South Dakota can be found at the following web site – [https://dot.sd.gov/doing-business/engineering/design-services/surveyors](https://dot.sd.gov/doing-business/engineering/design-services/surveyors)
   - Include an electronic file containing the plan/profile of the inplace gradeline at the structure.
   - Landowners with their addresses, phone numbers, and location of property.
   - Utilities with their addresses, phone numbers, and locations along the project.

2. **Field survey as necessary for preparation of construction plans.** Required information is listed below.
   - Establishment of transit points, land ties and benchmarks as well as cross sections and topography. (Stations, elevations, and offsets from permanent objects will be required for project benchmarks.)
   - Project limits as established by consultation with the County Highway Superintendent / City Engineer.
   - Additional legal survey as required for preparation of right-of-way plats.
   - The geometrics of horizontal and vertical alignment in accordance with the Local Roads Plan design standards.
   - Survey notes are to be retained on file with the Consultant for subsequent use in the preparation of construction plans and are to be available to the County/City upon request.

3. **(If needed.) Preliminary Hydraulic Data Sheet, Plan/Profile Sketches (Preliminary Hydraulic Layouts) and gradelines, Electronic Copy of the Hydraulic Model, Draft Hydraulic Design Report in accordance with the newest version of the South Dakota Drainage Manual, and cost estimates for existing and all proposed structure alternatives.** *(More than one feasible alternative is required. This includes options on different alignments if applicable. The options need to be acceptable to the owner’s future needs and maintenance capabilities. If there is only one type of structure that can reasonably be constructed at a site, simply provide an explanation instead of alternatives.)*

   The newest version of the South Dakota Drainage Manual is available at the following location: [https://dot.sd.gov/doing-business/engineering/design-services/forms-manuals](https://dot.sd.gov/doing-business/engineering/design-services/forms-manuals). Guidance and examples can be found in Chapter 6 of the manual. The current preliminary hydraulic data sheet to be used can be found in the folder under “000 LGA General Info and Docs” located on the Consultant’s LGA SFTP site. Directions for filling out the form can be found at the same location. All items will be submitted to the Local Government Assistance Office for distribution to SDDOT personnel for review for compliance with minimum required State and Federal standards. Necessary revisions shall be provided in writing by the SDDOT and shall be forwarded to the Consultant by the Local Government Assistance (LGA) Office. Necessary revisions shall be completed by the consultant and the Revised Draft Hydraulic Design Report submitted within 2 weeks of receipt of revisions from LGA. The Consultant is wholly responsible for the accuracy of the design calculations and the independent check design calculations.
4. **If needed.** Conduct TS&L inspection, assistance in the selection of the type of preservation or rehabilitation, and preparation of TS&L summary letter. The county or city (owner) shall be in attendance and advance notice given the Local Government Assistance Office so if time allows, a staff member can attend.

5. **If needed.** Report of Foundation Investigation. Conduct field investigation and provide design recommendations according to AASHTO LRFD Bridge Design Specifications Section 10. Report shall include boring information, lab results, and design recommendations. See Examples #1 and #2, following the attachments, for reports that are typically developed by SDDOT Geotechnical Engineering Activity.

6. **If needed.** For Structure Chosen at TS&L: Final Hydraulic Design Report, Final Hydraulic Data Sheet (use the current data sheet found in the folder “000 LGA General Info and Docs” located on the LGA SFTP site,) Hydraulic model with existing and proposed conditions, and if the structure selected is a bridge, Scour Memo summarizing hydraulic scour calculation, Scour Calculation, and Berm Slope Protection Recommendations (if applicable.)

7. Survey and plans for the above referenced project as described in the application or TS&L letter (if applicable) and Final Hydraulics Data Sheet, design calculations, independent design check, and load ratings. Review plans (100% complete) are to be submitted in PDF format. Specifications shall follow the most current edition of the Standard Specification for Roads and Bridges. South Dakota Department of Transportation Bid Items, Standard plates and plan notes, from the SDDOT website, must be used in development of the plans.

If applicable to the type of rehabilitation, the consultant shall provide design calculations, independent check, and load ratings for the structure as set forth in the Master Retainer Contract. The Consultant is wholly responsible for the accuracy and safe keeping of the design calculations and the independent design check.

8. Incorporation into the plans of any changes that may be requested in the SDDOT plan review comments or provide written explanation for items not changes.

9. Review of shop fabrication drawings as may be required and submittal of the approved shop drawings to the Consultant. This item is to be completed within two (2) weeks of receipt of shop or fabrication drawings from the contractor and shall be noted accordingly in the plans.

10. Provide Quality Assurance / Quality Control Testing Plan based on SDDOT Materials Manual. This document must be reviewed by the SDDOT prior to the notice to proceed being issued to the contractor. See Appendix D for requirements.

Please refer to the checklist in Attachment #1 for the TS&L Packet of items that shall be submitted to the Local Government Assistance Office.
Attachment #1
Bridge Improvement Grant
Checklist for Structure Preservation or Rehabilitation Work Order

These items must be submitted to DOT/Local Government Assistance. If any of these items are missing, the full packet will be returned for completion and resubmission to this office.

Project Number
County
PCN

CROSS OFF ANY NON-APPLICABLE ITEMS

☐ Survey Sheets and Contour Map including the following information:

☐ Stationing from south to north or west to east
☐ Beginning and ending stations of the existing structure
☐ Beginning and ending stations of proposed structures
☐ Proposed and existing gradelines
☐ Stream profile and cross sections (Downstream to upstream direction including a table showing stations and elevations for each shot taken)
☐ Elevation and location of buildings and other structures
☐ Survey information using sea level datum and showing station, elevation, offset, and physical description of each project benchmark
☐ Landowner names, addresses, phone numbers, and legal descriptions of their property
☐ Utility names, addresses, phone numbers, and locations along the project

☐ Preliminary Hydraulic Data Sheet (use current data sheet found in the folder “000 LGA General Info and Docs” located on the LGA SFTP site) including the following information:

☐ Calculated flows
☐ Inplace conditions  (Ordinary High Water Elevation, HW_{100}, Vmax, OTfr)
☐ Proposed conditions for each option  (HW_{2}, HW_{25}, HW_{100}, Vmax Qot, OTfr, ELlovertop)
☐ Ordinary High Water Elevation Shown on Cross-Sections (vegetation elevation on stream banks – approx. 2-year flow)
☐ Observed High Water Elevation (identifiable high water mark)

☐ Electronic copy of Hydraulic Model of existing and proposed conditions

☐ Plan and profile sketches (preliminary hydraulic layout sheets) for the existing structure and proposed gradelines for each option. (More than one feasible alternative is required. This includes options on different alignments if applicable. The options need to be acceptable to the owner’s future needs and maintenance capabilities. If there is only one type of structure that can reasonably be constructed at a site, simply provide an explanation instead of alternatives.)

☐ Cost Estimates (including design and construction engineering and construction costs for each option.)
Local Bridge Improvement Grant (BIG) Procedure

☐ Revised Draft Hydraulic Report

☐ TS&L Summary Letter

☐ Report of Foundation Investigation (see Examples 1 and 2 in this appendix)

☐ For Structure Chosen at TS&L
  ☐ Final Hydraulic Design Report
  ☐ Final Hydraulic Data Sheet (use current data sheet found in the folder “000 LGA General Info and Docs” located on the LGA SFTP site)
  ☐ Hydraulic model with existing and proposed conditions
  ☐ Scour memo, scour calculations, and berm slope protection recommendations (Bridges Only)

☐ Plan/profile, general drawing sketches, and riprap layout as selected during the TS&L

☐ Review Plans (100% complete & ready for review) in PDF Format

☐ Design calculations, independent design check, and load ratings

☐ To be submitted after plan review is complete

☐ All Plan Review Comments must be Addressed and Documented

☐ Final Plans – Electronic PDF file of the engineered, stamped set of plans

☐ Construction Management Plan
REPORT OF FOUNDATION INVESTIGATION

PROJECT: BRO 8048(03) Mellette County PCN 02DY

LOCATION: Structure No. 48-102-010, 18.9 miles North & 0.8 miles West of Cedar Butte over the White River.

METHOD OF INVESTIGATION:

All soundings are made according to the Standard South Dakota Subsurface Investigation Techniques and AASHTO Specifications. Auger holes are drilled with a 4-1/2 inch continuous flight auger. Penetration and Push Test holes are drilled with a 6-5/8 inch continuous hollow stem auger. Push core samples are obtained by hydraulically ramming a 2 foot long lined split spoon sampler into the soil to obtain 2 inch nominal diameter soil samples. Penetration tests are conducted by dropping a 140 pound hammer 30 inches to obtain 2 inch nominal diameter samples and to measure the resistance to penetration of the soil. Corings with the SDDOT drive rig are performed by using a California retractable plug sampler, which is driven with a 490 pound hammer. The drill stem is P.K. rod, which is 2-7/8 inch O.D., and 2 inch nominal diameter cores are obtained. All laboratory tests are performed in accordance with standard AASHTO or SDDOT laboratory procedures.

RECOMMENDATIONS:

Abutments:
   I. Steel HP10 X 42 Piling
      A. A LRFD maximum factored pile bearing resistance of 77 tons can be used for design.
      B. The anticipated tip elevations are:
         | Station | Elevation |
         | --------|-----------|
         | 22+06   | 1910      |
         | 25+27   | 1892      |
      C. The nominal pile bearing resistance shall be 192 tons verified by the SDDOT’s Modified ENR formula.

Bents:
   I. Drilled Shafts
      A. A LRFD maximum factored resistance value of 2,800 psf can be used for design below elevation 1912 ft. or maximum scour whichever is lower.
      B. Permanent casings will be required to elevation 1915 ft.
      C. The point of fixity within the bedrock can be assumed to be the elevation 1912 ft.

DISCUSSION:

The proposed structure location is underlain by brown sand-silt (alluvium) overlying brown silt-sand with gravel (alluvium). The alluvial sediments rest upon gray silt-clay (Pierre Shale). The D50 of the brown sand-silt, brown silt-sand with gravel, and gray silt-clay (Pierre Shale) can be assumed to be 0.06 mm, 1.0 mm, and 0.004 mm. The D95 of the brown sand-silt, brown silt-sand with gravel, and gray silt-clay (Pierre Shale) can be assumed to be 1.0 mm, 6.0 mm, and 0.06 mm.

Steel HP10X42 piling along with the anticipated tip elevations, are listed in the recommendations for use in the abutments. Drilled Shafts are listed in the recommendations for use at the bents.

The piling were evaluated for drivability and group effects at the LRFD Strength Limit State. Settlement of the substructure units and horizontal movement of the abutment piling were evaluated at the LRFD Service Limit State.

Drivability –
A drivability analysis was performed for the steel HP10X42 piling using the wave equation analysis program (GRLWEAP). A group of pile hammers that were evaluated and found to produce acceptable driving stresses is listed later in this report for inclusion in the plans.

Pile Group Effects:

Axial Loading – Abutments
For a single row of piling, AASHTO requires the center-to-center pile spacing to be at least 30” or 2.5 times the width of the pile, whichever is greater. Therefore, for the steel HP10x42 piling at the abutment the center-to-center spacing shall be at least 30”.

Settlement –
The steel pile tips will be founded in the Pierre Shale. Unconfined compression test results of the Pierre Shale exceed the proposed bridge loadings. Past experience for piling driven into hard shale soil bedrocks has shown little, if any, settlement has occurred. Therefore, 1/4 inch or less of total settlement can be used to design the substructure units.

Horizontal Movement –
AASHTO states that if the center-to-center spacing of the piling in the substructure unit is greater than 5 times the width of the pile then group effects can be ignored. Therefore, if the designed spacing is greater than 5 times the pile width a group efficiency factor of 1.0 can be used with no reduction in pile loading required. If this minimum pile spacing is not met a reduction factor will need to be calculated according to the AASHTO code.

Horizontal movement at the substructure units can be calculated using the following soil parameters:

- Sand-silt (alluvium); phi angle = 24 degrees, cohesion = 50 psf, wet unit weight = 118 pcf
- Silt-sand with gravel (alluvium); phi angle = 32 degrees, cohesion = 0 psf, wet unit weight = 130 pcf
- Silt-clay (Pierre Shale); phi angle = 18 degrees, cohesion = 1,000 psf, wet unit weight = 130 pcf

For the drilled shafts, a LRFD maximum factored resistance value (skin friction) of 2,800 psf is recommended below elevation 1912 for the bents or maximum scour whichever is lower. The point of fixity within the bedrock can be assumed to be 1912 for the bents.

Each drilled shaft shall have a minimum of 3 access tubes for a shaft diameter of 3.0’ and less. The number of access tubes needed shall be increased by 1 for each foot increase in shaft diameter above the 3.0’. The access tubes shall be furnished and installed according to the South Dakota Department of Transportation’s 2004 Standard Specifications for Roads and Bridges. These access tubes shall be equally spaced in the shaft reinforcement prior to placing the reinforcement cage.

A representative of the CONSULTING FIRM (NAME AND NUMBER) shall be present during drilling operations to confirm the elevations provided in this report and to observe the placement of the drilled shafts. In addition to the notes below, contact the CONSULTANT REPRESENTATIVE for the most current drilled shaft construction notes to be included in the plans.

**The following notes shall be placed in the plans:**

A drivability analysis was performed using the wave equation analysis program (GRLWEAP). The pile hammers listed below were evaluated and found to produce acceptable driving stresses. Pile hammers not listed will require evaluation and approval prior to use from the CONSULTANT REPRESENTATIVE NAME AND PHONE NUMBER.

Hammers need to be sized according to site specific soil parameters and structure design requirements. The following list of hammers is owned and readily available by contractors that do work in SD. Select and specify in the report which hammers are acceptable for use on individual projects.

Pierce Shale is a marine shale with a textural classification that varies from silt to clayey silt. Color varies from buff gray to black. The formation may contain cementation zones that are normally thin but occasionally are massive. These zones may be present that are cemented resulting in massive or siltstone clast. Siltstone zones may be encountered but are normally less than one half inch thick. Kayectioned Pierce Shale is considered to be "soft rock".

Penetration tests are conducted by dropping a 140 pound hammer 30 inches to obtain 2 inch nominal diameter samples and to measure the resistance to penetration of the soil.

Sample Zone 18 Blow Per Foot

Drive test are conducted by driving a 2 1/2 inch drill stem with attached rotator in a plug sampler for taking samples and to measure the resistance to penetration of the soil.

Drill holes are drilled with a 4 1/2 inch diameter continuous flight auger. Penetration and push Test holes are drilled with a 4 1/2 inch diameter hollow stem auger. Push cores are obtained by hydraulically forming a 2 foot long, 2 inch nominal diameter soil samples.

BIG Procedure Appendix C-9
Local Bridge Improvement Grant (BIG) Procedure

RECOMMENDATIONS

Re: BRO 8027(29), Gregory County, PCN 00QR
Str. No. 27-030-081, located 2.0 West & 0.1 South of the Jct of SD44/SD47
RCBC Undercut Recommendation

Soils maps of the area indicate the soils at the location of the proposed structure have the following characteristics.

Station 16+86 (Str. No. 27-030-081)

CLASSIFICATION: A-7
Clay & Silty Clay
AVERAGE LIQUID LIMIT: 66
SHRINK-SWELL POTENTIAL: High to Very High
FROST ACTION POTENTIAL: Low
CORROSIVITY: High for steel, Low to Moderate for concrete

RECOMMENDATIONS:

Provide 24 inches of undercut and backfill.

DISCUSSION:

The project consists of replacing an existing single span 22’ steel stringer bridge with a 2 barrel 13’ x 6’ cast-in-place RCBC. The proposed box culvert will be in the same location as the existing bridge location. The existing surfacing on the road is gravel and will be resurfaced with gravel upon completion. Minimal grading at the proposed box culvert location is anticipated, therefore, the material shall be compacted using the Ordinary Compaction Method.

A subsurface investigation was conducted for the proposed RCBC. The subsurface investigation consisted of placing a boring near both the proposed inlet and outlet ends of the structure and logging the material to 3 feet below the flow line. Samples were collected from below the flow line for soils classification. A dynamic cone penetrometer was used at both the inlet and outlet ends to identify the change in relative density of the subsurface material below flow line.

Subsurface soils at the proposed site consist of brown silt-clay to 3’ below the existing flow line.

The 2’ undercut depth is recommended to remove the low strength soils with high shrink-swell potential from below the box culvert.

The following paragraphs shall be placed in the plans:

Compaction of earth embankment and box culvert backfill material shall be governed by the Ordinary Compaction Method.

Any questions about the recommendations or the subsurface conditions can be directed to the CONSULTANT CONTACT NAME AND PHONE NUMBER.
Appendix D - Construction Engineering Requirements
  Initial NBI Inspection Requirement – D2
  Construction Management Plan – D3 thru D9
Bridge Improvement Grant

Initial NBI Inspection Requirement

The County / City will require the construction engineering firm or their subconsultant, either of which must be on the SDDOT’s current consultant retainer for local bridge inspection, to perform an initial NBI inspection of the structure, ensuring a qualified Team Leader is on site for the inspection. Within 90 days of the structure being opened to traffic, the County / City will submit the completed report, BrM coding sheets, plans, applicable load ratings, and approved shop plans for girders, reinforced concrete box culverts, and other applicable items, to the SDDOT’s LGA Bridge Inspection Engineer.
Use and Limitation: The Consultant shall use this document as a guide in preparing a construction management plan to be included in the bid documents for their specific project. Consultants are cautioned that the provision of this suggested sample construction management plan is not an implied or explicit guarantee of grant obligation compliance. The Consultant is solely responsible for the preparation and submittal of compliant construction management plan in accordance with the grant conditions. ONLY INCLUDE PROJECT SPECIFIC INFORMATION.

PROJECT INFORMATION

This Construction Management Plan (CMP) details the measures and procedures required to assure compliance with the quality assurance and acceptance provisions of the Bridge Improvement Grant construction contract for Project No. [ ] with [County or City name], South Dakota. The work to be accomplished in this project consists of:

PROJECT SPONSOR: [Name & contact information for sponsor]

CONTRACT ADMINISTRATION:

[Name of firm Responsible for Const. Observation & QA testing]

[Name of QA firm] – Field tests

[Name & contact info for QA lab] – Lab tests
RESPONSIBILITIES

Project Manager/Engineer
The Project Manager / Engineer, on behalf of the sponsor is the person with overall responsibility for contract administration of this project. The Project Manager / Engineer has the authority to take the necessary actions to monitor compliance with the contract documents.

Construction Observer
The responsibilities of the Construction Observer shall include monitoring all aspects of the job, sampling materials for acceptance, conducting tests on embankment and excavation areas, reviewing and analyzing all test results, assuring that work is within specification limits, advising the Contractor’s Superintendent and Project Engineer of nonconformance and possible corrective actions, and measuring quantities for payment.

Quality Acceptance Laboratory
[As appropriate, clarify which firm is responsible for what QA duties], testing lab duties shall include sampling materials for acceptance and conducting tests on: [embankment, excavation, subbase, base, rip rap, class A45 concrete, pile, PCC]. (If responsibilities for testing of materials are split between different organizations, list which firm is responsible for which QA tests.)

[QA Lab name] personnel assigned to construction testing have received certified training from the [Name of appropriate certifications] (e.g. Troxler Nuclear Equipment Seminar and the American Concrete Institute (ACI)).

All QA testing shall be performed by an (ASTM C1077 and D3666) accredited laboratory and a copy of the current accreditation shall be supplied to the Engineer and Owner, for approval, prior to submitting test results.
QUALITY ASSURANCE INSPECTION PROCEDURES

1. **Quality Assurance Tests**: A list of tests and certifications required by the contract specifications can be found in the attached Appendix A. The list includes the referenced specification section and testing requirements. All parties will be informed of their responsibilities. This information will be reviewed at the preconstruction conference and monitored throughout the project.

2. **Submittals**: The Engineer shall maintain a file containing certifications and submittals required by contract as provided by the contractor, as well as approvals from the Engineer.

3. [Names of firm(s) responsible for QA test reports] will provide acceptance test reports to the [Owner / Engineer] as soon as the results are available, electronically. Typed copies shall be made available within [one] working day [delivered via electronic mail].

4. **Material Test Reports**: Material test results shall be verbally made available to the [Owner / Engineer] within [one hour] after the test report is completed and typed copies shall be made available within one working day [delivered via electronic mail].
   
   - Calibration check on equipment used to determine the noncompliance item, if applicable.
   - Confirmation of noncompliance through retesting and/or follow-up observations.
   - If a solution to the nonconformance issue is not reached in a reasonable time frame, additional qualified contractor personnel will be contacted to assist in identifying and correcting the problem.
   - If a severe nonconformance problem is detected and a reasonable solution cannot be implemented in a reasonable time frame, the Construction Superintendent will consult with the Project Engineer and the work will be suspended.
   - The work will not begin again until the Construction Superintendent and Project Engineer concur that a solution to the problem has been found and successfully implemented.

5. **Test Reports Which Require Corrective Actions**: Should test results or observations indicate noncompliance with the project contract, plans, or specifications, the following communication and follow-up action will be implemented, as applicable:
   
   - Verbal notification to the sponsor, Construction Superintendent, work area foreman and/or plant operator.
6. **Daily Reports:** The project manager or his representative will maintain a daily diary summarizing pertinent construction items. Items recorded shall include (as a minimum):
   a) Date
   b) Weather Conditions
   c) Brief Summary of Work Performed
   d) Number of workers on site
   e) Type and Amount of Major Equipment being utilized
   f) Running total of working/calendar days used on project
   g) Significant Directives/Communication with contractor (e.g. regarding construction procedures or material quality)
   h) Summary of QA tests performed that day
   i) Arrival / Departure Time of On Site Inspection Staff

7. **Bi-Weekly Reports:** A summary of bi-weekly construction status shall be prepared and submitted to [owner] every [list day, e.g. Friday]. Report shall include summary of work completed in that 2 week period, summary of QA test results, discussion of any controversial issues that came up, and work anticipated during next reporting period. A sample report is included in Appendix B.

8. The resident observer and acceptance testing lab personnel shall maintain all acceptance test reports and provide copies to the owner/engineer as soon as results are available.

9. [Name of firm responsible for final construction report] will prepare a final project construction material testing and acceptance report that includes a summary of: all acceptance tests results, quantity of materials, and all bi-weekly reports. (Actual test reports will be available upon request). This will be submitted to the SDDOT with the final pay application.
Include listing of all QC/QA tests and certifications required by the contract specifications.

Prepared by
Appendix E - Bridge Improvement Grant Sign Layout
Contractor shall install and furnish Bridge Improvement Grant (BIG) signs as shown. Location of regulatory or warning signs shall take precedence and sign may be adjusted as directed by the Engineer.

Refer to Special Detail L72 for mounting height and offset of sign.
Bridge Improvement Grant - Local Administration Check List
(Source of Info – BIG Procedures and BIG Funding Agreement)

Multiple grants can be let together but all estimates, bids, and payments must be sent to LGA per grant (not combined). LGA Project Managers will keep the ‘U’ drive project folders current at all times with all project documents & e-mail correspondence as received in order to have everything available to staff if there are any questions and to help expedite reimbursements.

Responsibilities of County/City

☐ Hire a Professional Engineer (PE) from SDDOT Consultant Retainer Lists for Local Gov’t or State Bridge Design Categories
  ○ Prepare contract between county/city and consultant which must contain:
    ▪ Scope of services & retainer requirements as included in DOT funding agreement (NOTE: retainer requirements reflect the active retainer at the time the BIG Procedures for the applicable grant year are approved by the Transportation Commission)
    ▪ Reference must be made to the project number and/or structure number associated with the grant

PRIOR TO ADVERTISEMENT

☐ Obtain and submit (as needed) to DOT for review (signed and sealed by a PE) LGA Project Managers – add following note to 1st page of all BIG BlueBeam reviews, “NOTICE: State forces, please charge time to BR BGPE(00)23-1, PCN 08A4.” (This # in effect only between 10/1/22 & 9/30/23 – contact N. Clocksin):
  ○ Final Hydraulic Design Report, Final Hydraulic Data Sheet, Hydraulic model with existing and proposed conditions and if the bridge scour protection is needed, Scour Memo summarizing hydraulic scour calculation, Scour Calculation, and Berm Slope Protection Recommendations (if applicable) *
  ○ Foundations report (as defined in the funding agreement attachment); NOTE: firm must be on the SDDOT Consultant Retainer category for Local – Geotechnical Services *
  ○ review plans (100% complete – anything less won’t be reviewed)
  ○ bid documents / specifications (only engineer’s construction estimate and any special out of the ordinary specs)
  ○ design calculations, scour analyses *, load rating and analysis for bridge inspection file
  ○ all necessary permits
    ▪ Corp of Engineers 404 Permit *, DOT/LGA Utility Cert, DOT/LGA ROW Cert, Federal Lands, BIA, Tribal, Stormwater, Municipal, etc.
  ○ BIG Construction Management Plan
  ○ Draft contract (showing hours) for construction engineering & Initial NBI Inspection – consultant must be a PE selected from the SDDOT Consultant Retainer List for State Construction Administration to do Construction Engineering & consultant or their subcontractor must be on the SDDOT Consultant Retainer List for Local Bridge Inspection to do the Initial NBI Inspection.

☐ Obtain DOT approval letter to advertise (All applicable documents noted above must be revised as needed and approved by DOT before this letter will be sent from the DOT)

☐ Advertise project for bids and conduct bid letting

* Not applicable in all cases (for example, simple deck overlay)

PRIOR TO SIGNING CONTRACT WITH CONTRACTOR

☐ Submit to DOT for review bid tabulation showing engineer’s estimate and all bidders, in addition to the county/city’s recommendation for award

☐ Obtain DOT bid concurrence letter

AFTER DOT BID CONCURRENCE

☐ Enter into construction & construction engineering contracts and issue notice to proceed

☐ Submit copies of both contracts to DOT for release of 75% of the grant fund portion of the combined total of the contract amounts

☐ Obtain and supply to DOT as-built plans and notification of completion of project

☐ Submit all design, construction, and CE billings to DOT for reimbursement of remaining grant funds
REIMBURSEMENT PROCESS
Bridge Improvement Grant - Local Administration Check List
(Source of Info – BIG Procedures and BIG Funding Agreement)

Multiple grants can be let together but all estimates, bids, and payments must be sent to LGA per grant (not combined)

Responsibilities of County/City
☐ Submit to DOT for Reimbursement of Design Billings
  o Copy of contract as noted above must accompany first billing by county/city
  o “BIG Direct Payment Invoice” must accompany each billing
  o Copy of bill(s) from consultant
  o Proof of payment by county/city (copy of check or commission minutes)
  o Billings must be at least quarterly but not more frequently than monthly

FINALLING PROCESS
Bridge Improvement Grant - Local Administration Check List
(Source of Info – BIG Procedures and BIG Funding Agreement)

Multiple grants can be let together but all estimates, bids, and payments must be sent to LGA per grant (not combined)

Responsibilities of County/City
☐ Submit to DOT for Reimbursement a FINAL Design Billing
  o Submit “BIG Direct Payment Invoice” with Final Billing box checked (blue box on lower right)
  o Copy of bill(s) from consultant
  o Proof of payment by county/city (copy of check or commission minutes)

☐ Submit to DOT for Reimbursement a FINAL Construction Engineering (CE) Billing – NOTE: CE billings must be processed separately from design billings as CE does not count against the grant cap.
  o Submit “BIG Direct Payment Invoice” with Final Billing box checked (blue box on lower right)
  o Copy of bills(s) from consultant
  o Proof of payment by county/city (copy of check or commission minutes)

☐ Submit to DOT copy of testing documents as defined in the BIG Construction Management Plan prior to or with FINAL Contractor Billing

☐ Submit to DOT for Reimbursement a FINAL Contractor Billing
  o Copy of construction contract as noted above must accompany first billing by county/city
  o “Pay Estimate for BIGs” & “BIG Direct Pymts Invoice” for Construction must accompany each billing
    ▪ Any applicable Change Orders must be sent in as well, as approved and signed by contractor, consultant, and county/city

Five-Year County Highway and Bridge Improvement Plan

A. What is the Five-Year County Highway and Bridge Improvement Plan?

The Five-Year County Highway and Bridge Improvement Plan, or TRANSPORTATION PLAN, is a short-range planning document that will be developed and updated annually based on needs and identified department policies. The plan will include roadway classifications, roadway and bridge inventory, a five-year list of the projected revenue for highway and bridge improvements, a five-year list of programmed highway and bridge projects based on the projected revenue and the status of programmed projects from the previous plan. Projects that cannot be funded with current revenues can be included in the prioritized project listing and brought into the funded program if funding becomes available.

The TRANSPORTATION PLAN should be used as a tool to assist the county in budgeting, planning and incorporating the needs and concerns of the public.

Transportation planning is a cooperative process designed to foster involvement by all users of the system, such as the business community, community groups, the traveling public, freight operators and the general public through a proactive public participation process conducted by the county. The planning process also fosters communication between local governments such as townships, towns and larger cities to jointly discuss transportation needs and coordinate improvements.

B. Definitions

ADT - Value of average daily traffic contained in the National Bridge Inventory (NBI Item 29).

Accepted Plan – A plan which has been reviewed and accepted by the Department in accordance with Administrative Rule 70:12:02.
**Amended Plan** – Changes to the plan and plan sheets during the year which require a resolution signed by the appropriate governing entity. At a minimum, this includes a revised Project Listing and Revenue Sources Document.

**Annual Update Plan** – Submission of an annual update of the accepted plan, by an eligible applicant.

**Bridge** - As defined in the National Bridge Inspection Standards (NBIS): A structure including supports erected over a depression or an obstruction, such as water, highway, or railway, and having a track or passageway for carrying traffic or other moving loads, and having an opening measured along the center of the roadway of more than 20 feet between undercopings of abutments or spring lines of arches, or extreme ends of openings for multiple boxes; it may also include multiple pipes where the clear distance between openings is less than half of the smaller contiguous opening. Refer to Figure II-1.

---

**Figure II-1**

**Bridge Improvement Grant (BIG)** – Grant available to Local Public Agency (LPA) for preliminary engineering, bridge preservation, structure replacement or major rehabilitation.

**Bridge Preservation** – Actions or strategies that prevent, delay or reduce deterioration of bridges or bridge elements, restore the function of existing bridges, keep bridges in good condition and extend their life. Preservation actions may be preventive or condition-driven.

**Bridge Rehabilitation** – Major repair work such as deck replacement, bent cap repair, encasing pile, abutment repair, etc.

**Federal-aid System** – A public highway eligible for assistance from the Federal Highway Administration other than a highway functionally classified as a local road or rural minor collector.

**PE–BIG** – Subgrant available for LPA to cover preliminary engineering work, including preservation/rehabilitation/replacement investigation studies, surveys, bridge hydrologic/hydraulic (H/H) studies, including the type, location and size recommendation, foundations investigation, etc.

**Posted** – Bridge is signed for less than legal loads. NBI item 70.

**Preservation BIG** – Grant for minor repair/rehabilitation and preservation work valued at less than financial limits as set in Section III of this procedure. Examples are scour projects, fatigue retrofits, waterproofing joints, painting, safety upgrade rail/barrier, or deck treatments (Concrete Overlays, Epoxy Seals, Asphalt & Membrane overlays, and Epoxy Chip Seals). The primary function of these treatments is to preserve the structure elements and extend the service life of the structure.

**Rehabilitation Projects** – Major repair/rehabilitation work or combination of minor preservation work valued greater than financial limits to be classified as rehabilitation/replacement work.

**Replacement Projects** – Total replacement of the structure.

**Wheel Tax** – Imposition of a tax by County ordinance as authorized in South Dakota Codified Law 32-5A. County rate evaluated will be based on the tax imposed to vehicles over 6,000 lbs. GVW.

### C. State Requirements

In 2015, the State of South Dakota established the local Bridge Improvement Grant fund by SDCL 32-11-38. To be eligible for the funding, the county must have imposed a wheel tax and have an adopted TRANSPORTATION PLAN in accordance with the rules promulgated by the Transportation Commission and Administrative Rule, Article 70:12. County Commission certification adopting the plan and a copy of the plan must be submitted to the South Dakota Department of Transportation (SDDOT) for approval by October 15 each year. The TRANSPORTATION PLAN must be updated and submitted to the SDDOT annually to maintain eligibility for the bridge grant funding.
D. Developing and Updating a TRANSPORTATION PLAN

Projects are generated from many sources including elected officials, studies, inventory management systems, local knowledge, staff members and other interested individuals and groups. In many cases, tools such as pavement management systems, bridge and culvert inventories, accident data, historical data and local knowledge are used to help identify potential new projects. Potential new projects must undergo a review of scope, priority, schedule and financing concepts.

Once the programmed project list is developed, a coordination meeting with townships and a public meeting should be held to provide an opportunity for public comment. Based on the results of the township coordination meeting, public meeting and comments from the county commission, a final version of the TRANSPORTATION PLAN is developed. This final version is then adopted by the commission. Commission certification adopting the plan and final document are to be submitted to the SDDOT for approval.

The annual TRANSPORTATION PLAN update starts with the previously adopted TRANSPORTATION PLAN. Projects in the previously adopted TRANSPORTATION PLAN are reviewed and those that have been completed, or because of changing conditions, are no longer needed, are removed from the TRANSPORTATION PLAN. The remaining projects carried over from the previous TRANSPORTATION PLAN are reviewed for changes to cost estimates, project funding, schedule or scope during the update process to ensure the most current information is represented in the TRANSPORTATION PLAN.

Updated projects from the previous TRANSPORTATION PLAN and new projects can be used to create an updated project needs list (optional). A financial plan is developed to identify available funding for highways and bridges. With the optional project needs list, or other method used to identify project needs, and the list of projected revenue available for highway and bridge use, a five-year programmed project list can be developed. The phasing and funding of these projects in the five-year project list is based on input from county elected officials, studies, inventory management systems, public, staff and local and historical knowledge.
E. What to Include in the TRANSPORTATION PLAN

The TRANSPORTATION PLAN should include, but is not limited to, the following information:

1. Map(s)

Create one or multiple maps to include classification of roadways. The maps are a tool to be used in the planning and public meeting process. They are available through the SDDOT. Since the maps are provided by the SDDOT, they do not need to be a part of the final submittal to the department. However, the plan submittal to the DOT should clearly state the maps were provided at the public meeting.

In addition, maps may include, if available, Average Daily Traffic (ADT), inventory of highways and structures. The classification map can either be the federal function classification map (SDDOT) or a local map showing the function of the roadway.

Roadway classification is the process by which streets and highways are grouped into classes, or systems, according to the character of service they are intended to provide. Basic to this process is the recognition that individual roads and streets do not serve travel independently in any major way. Rather, most travel involves movement through a network of roads. It becomes necessary then to determine how this travel can be channelized within the network in a logical and efficient manner. Functional classification defines the nature of this channelization process by defining the role that any particular road or street should play in serving the flow of trips through a highway network.

Examples of roadway classification are:

- Arterial – Roadways with higher traffic with a longer uninterrupted distance
- Collector – Roadways that connect traffic from the local roads to the arterials
- Local – Roadways that have little or no through movement and typically serve short travel distances
Design standards are tied to functional classification. Each class has a range of recommended lane widths, shoulder widths, curve radii, etc.

Map examples can be found on pages 14-16 and required GIS data files and maps are available from the SDDOT.

2. Inventory of Highways and Bridges

Create a list or map(s) that show an inventory of roads maintained by the county. The map(s) or list should identify the location and surface type (gravel, blotter, asphalt concrete, etc.). Optional items could include, if available: surface width, surface thickness, base thickness, year built, last year improved and type of improvement, shoulder type, shoulder width and culvert inventory. A highway map showing surface type can be used for the highway inventory.

Create a list or map(s) that shows an inventory of the bridges for which the county is responsible per SDCL 31-14-2. The list or map(s) will identify the location of the bridge and whether the bridge is posted for load capacity along with the posted limit(s). Optional items include: year built, last year improved and improvement type.

</tbody>
</table>
3. Project Needs List (Optional)

To help in programming five years of projects, it may be beneficial to create a list of all the highway and bridge needs in the county. This list should include a project location, project description with an improvement type (reconstruction, maintenance, surfacing, structure replacement or rehabilitation) and a project estimate. Projects contained in the project needs list are organized according to project need based on input from public leaders, staff and the general public. The needs may be ranked as high, medium or low priority, or by a numbering system. The needs list could help show the public and elected officials the needs in the county and the programmed projects will show what projects can be done with the funding available.

When developing the list of needs, consideration should be given to traffic generators such as schools, grain terminals, large dairies, ethanol plants, etc. The impacts from the traffic generators may change the classification triggering a need to improve the roadway. Some of the traffic generators may exist in neighboring counties or states and should not be ignored in the decision-making process. Safety issues should also be considered. Examples of safety projects are narrow or non-existent shoulders, pavement markings, blind corners, sharp curves, steep side slopes and poor sight distance.

Some of the needs may be short-term, and some may be long-term. The long-term needs may require several projects in order to complete. Determining the timeframe of long-term and short-term needs can vary depending on the size or complexity of the project.

The needs should identify problems or deficiencies and explore possible solutions. The county may want to evaluate efficiency of the existing systems or reducing the frequency and severity of crashes in identified problem areas.

The system needs should also consider preservation of existing facilities. Preventive maintenance is typically applied to pavements in good condition having significant remaining service life. As a major component of pavement preservation, preventive maintenance is a strategy of extending the service life by applying cost-effective treatments to the surface or near-surface of structurally sound pavements. Examples of preventive treatments include asphalt crack sealing, chip sealing, slurry or micro-
surfacing, thin and ultra-thin asphalt overlays, concrete joint sealing, diamond grinding, dowel-bar retrofit, and isolated, partial and/or full-depth repairs.

a. Project Types

1) Project improvements not considered routine or corrective maintenance by the county. Examples include:

ROADWAY
New Route Construction
Reconstruction
Pavement Replacement
Overlays
Re-graveling of segment/route
Restoration of pavement drainage system
Chip Seals
Micro-surfacing
Blotters
Slope flattening
Pipe/Culvert Linings or Rehab
Surface Type Change (Gravel → Asphalt / Asphalt → Gravel, etc.)

STRUCTURE
New Bridge Construction
Bridge Replacement
Deck Replacement
Deck/Slab Repair
Deck Overlay
Girder Repair/Painting
Column, Cap, or Abutment Repair
Scour Counter Measures
Seal Coats
Epoxy Chip Seal
Bridge Painting
Elimination of open joints
Bearing repair
Remove and Reset Box Culverts

2) The following types of projects are considered routine or corrective maintenance and it is optional to include them in the plan:

ROADWAY
Snow Removal
Pothole Patching/Repair
Gravel Blading
Crack Filling
Isolated Concrete/Asphalt Patching
Isolated Joint Replacement
Isolated / Spot Re-graveling
STRUCTURE
- Bridge Deck Patching
- Cleaning of Ditches and Structures
- Cleaning of Debris around Structures
- Pipe Cleanout

SDDOT’s Local Government Assistance Office should be consulted for other activities not listed.

**SAMPLE GRAVEL SURFACING SCHEDULE**

<table>

<td>Every 2 months</td>
</tr>
<tr>
<td>Low</td>
<td>&lt;10</td>
<td>7&quot;</td>
<td>Every 3 months</td>
</tr>
</tbody>
</table>

**b. Project Costs**

The Total Project Cost included in the TRANSPORTATION PLAN is based on varying levels of cost estimating. As the project moves from the planning level to a more detailed level of design, cost estimates are refined based on the more detailed information. The following defines the cost estimate types in order of increasing detail and certainty:

1) **Conceptual Estimate (Project needs List):** These conceptual estimates are used where a significant need has been identified but a detailed project scope has not been developed. These cost estimates have the potential to change significantly as the project scope becomes more defined.

2) **Planning Level Estimate (Five-year programmed project list):** These cost estimates are based on a generally defined scope. Cost estimates are usually based on limited field-work and general cost assumptions. No actual design work has been done prior to the development of these cost estimates. The cost estimate could still change significantly as design work begins, but the estimate is more reliable than the Conceptual Estimates.

3) **Engineer’s Estimate (Design phase):** These cost estimates are based on actual preliminary design work. If done for all facets of the project and there are no further additions to the project scope, these estimates should represent a fairly accurate cost for the project.
County governments will decide which type of cost estimate best fits to help them make decisions. Cost estimates should be updated as part of the TRANSPORTATION PLAN update.

The DOT has the statewide average bid prices for informational purposes on its website at https://dot.sd.gov/doing-business/contractors/forms-documents#listItemLink_1444.

</tbody>
</table>

4. **Projected Revenue Available** (Five-year budget projection for highway and bridge program)

The TRANSPORTATION PLAN projected revenue table identifies the amount of funds projected to be available for highway and bridge use over the next five years.

Non-confirmed but potential revenue sources should be identified. These include, but are not limited to, grant funds applied for which confirmation has not yet been received.

Planned expenditures for each project are summarized into funding categories. The funding categories should reflect anticipated revenue sources. If they are different than what is listed below, the applicant should change the descriptions to best match the agency’s terminology. Below are examples of funding categories that may be used in the TRANSPORTATION PLAN:

**Revenue Sources** – This includes the following types of funding categories (other formats are acceptable):

a. **Local Funds** - The taxes levied portion of the revenue estimates includes a variety of funding sources including property tax, motor vehicle licenses, wheel tax, etc. Local funds also include the annual Surface Transportation Block Grant Program (STBGP) payout funds.

b. **Intergovernmental Revenue** – The Intergovernmental sources of revenue includes charges for services for townships and road districts.

c. **State Funds** - These are any revenues from the state for highway
purposes including Bridge Improvement Grants (BIG), Agri-Business Grants, Pavement Marking projects, and State Match on SIB loans and STBGP projects, etc.

d. **Federal Funding** - Federal funding is available through various programs included in Federal transportation legislation. SDDOT administers most of these programs. They include Emergency Relief (ER), Federal Emergency Management Agency (FEMA), Surface Transportation Block Grant Program Funds, Highway Impact Program (HIP) Funds for Bridges, Transportation Alternative Program (TAP), Safety funds, County-Wide Signing Projects, etc.

e. **Other** – Miscellaneous funding sources include transfer of general funds, sale of surplus property, and others that do not fit into the categories above.

5. **Project List (Five-year programmed project list based on projected funding)**

Create a project list either by using the project needs list or another method and the projected revenue available for highway and bridge use. The projects must be selected based on projected revenue available. Include a project location, project description with an improvement type, funding source(s) and a planning level or engineers estimate. Projects contained in the project list are organized according to programmed year and are based on needs and input from public leaders, staff and the public. If there are no capital improvement projects planned for the next five years, this section may still have a project with the improvement “Maintenance” listed. A sample spreadsheet can be found on page 19.

Portions of a project may be unfunded. A portion of the project cost planned for the five years included in the TRANSPORTATION PLAN may include grant funding which has been or will be applied for, but not yet approved.

If it is anticipated that an application for Bridge Improvement Grant funds will be submitted, this **must** show up in your project list. Bridge Improvement Grants will include Preliminary Engineering Grants, Bridge Preservation Grants and Bridge Replacement/Rehabilitation Grants. Enter the proposed project in the year you anticipate expending most of the funds. For Preliminary Engineering, that would be the year you anticipate hiring a consultant to do the survey, structure sizing, and hydraulic analyses. In most cases this will be the date at the top of the application form. For Bridge Preservation or Replacement/Rehabilitation projects, it is the year you plan on letting and constructing a project. If the project is expected to be let to bids in the fall, but the expenditure of funds will be in the following summer, use the year when most of the funds are anticipated to be spent.
Equipment is often a large portion of the Transportation budget and should also be considered when evaluating project selections.

6. Project Status List

Include the previous year’s programmed projects list and descriptions from the previous TRANSPORTATION PLAN and explain the status of the projects. Some examples would be: completed, under design, planning, in-progress, deferred to a specific year, etc. Showing the status of the projects from the previous year’s Plan (all five years), will give the elected officials and public an understanding of where the programmed projects stand.

F. Public Involvement and Coordination with other Agencies

Once a project list is developed, the county will coordinate with the townships on the township road bridges and conduct a public meeting to provide an opportunity for public comment. While a separate public meeting is recommended, it can be held in conjunction with a regular commission meeting. Following the public and township coordination meetings, the commission will consider all comments and develop a final version of the TRANSPORTATION PLAN. The county commission will adopt the final TRANSPORTATION PLAN and submit the TRANSPORTATION PLAN, including the cover form and certification, to the South Dakota Department of Transportation for approval.

The TRANSPORTATION PLAN shall include a copy of the affidavit of publication for the public meeting’s notice, a copy of the coordination letter / letter of notice from the county to the township if a bridge on a township road is included, an attendance list from the public meeting and a summary of all public comments.

G. Amendments to the Plan

The TRANSPORTATION PLAN may be amended by the county commissions at any of their regular meetings. Amendments that impact the potential application for BIG funds should be sent
to the SDDOT for their files to ensure that the BIG projects show up in the Plan prior to BIG applications being submitted.

H. Submittal of Plans and County Contact Information

The TRANSPORTATION PLAN shall be submitted to the Department of Transportation by October 15 each year.

The TRANSPORTATION PLAN shall include the Submittal and Certification Form as shown on page 20.

The preferred method of submittal of the TRANSPORTATION PLANS is electronically in pdf format to Colton.Stahl@state.sd.us. If it is not possible to email the plan, a hard copy (1) may be mailed to:

CHECKLIST OF REQUIREMENTS FOR PLAN

_______ Certification Form

Maps

_______ Map including roadway classification and bridge locations (if DOT unaltered maps are used at public meeting and are not attached, check here ______

_______ Map showing Five-year programmed project locations from the Programmed Project listing

Inventory lists

_______ Highways: include location and surface type (a map is acceptable; if DOT unaltered maps are used at public meeting and are not attached, check here ______

_______ Bridges: include location, sufficiency rating, and actual load limits if posted.

_______ Projected Revenue Available per year

_______ 5-year Project List (Programmed Projects)

_______ Project Status List (not required for first time plan submittal)

_______ Affidavit of publication of public meeting notice (copy of the notice or article alone, is not sufficient)

_______ Township coordination letters/notice (sample letter and mailing list is acceptable)

_______ Attendance list from public meeting (all attendees – not just commission members)

_______ Public Comments (if no comments are received, clearly indicate that in the plan submittal)
CHECKLIST OF REQUIREMENTS FOR ANNUAL UPDATE

- Certification Form
- Projected Revenue Available per year
- 5-year Project List (Programmed Projects)
- Project Status List
- Affidavit of publication of public meeting notice (copy of the notice or article alone, is not sufficient)
- Township coordination letters/notice (sample letter and mailing list is acceptable)
- Attendance list from public meeting (all attendees – not just commission members)
- Public Comments (if no comments are received, clearly indicate that in the plan submittal)
SAMPLE TRANSPORTATION PLAN MAP(S) AND FORMS

CERTIFICATION FORM

The following Form shall be included at the front of the County Highway and Bridge Improvement Plan:

Certification: As approved this ___ day of __________, 202__
_____________________ County Commission

By: ________________________________
County Commission Chairperson

Attest:

_______________________________________
County Auditor or Clerk

County Contact Person: _______________________
Phone Number: _____________________________
Email Address: _____________________________

Received by SDDOT on _______________________
Approved by SDDOT on _____________________

PUBLIC INVOLVEMENT DOCUMENTATION

Include copies of any invitations sent to townships or road districts.

Below is the sample of documentation that should be used for public involvement and coordination with other agencies.

A public meeting was held on (DATE) to solicit public input into the proposed 5 year plan prior to adoption by the COMMISSION. (#) attended the meeting. Notice of the meeting was printed in the (NEWSPAPER(s)) prior to the meeting, as shown by the affidavit of publication.

---

Affidavit of Publication

STATE OF SOUTH DAKOTA )
COUNTY OF DAIVSON ) SS

Penny Hohbach of said county, being, first duly sworn, on oath, says; that he/she is the publisher or an employee of the publisher of The Daily Republic, a daily newspaper, published in the City of Mitchell, in said County of Davison, and State of South Dakota; that he/she has full and personal knowledge of the facts herein stated; that said newspaper is a legal newspaper as defined in SDCL 17-2-2.1 through 17-2-2.4 inclusive; that said newspaper has been published within the said County of Davison and State of South Dakota, for at least one year next prior to the first publication of the attached public notice, and that the notice, order or advertisement, a printed copy of which, taken from the paper in which the same was published, and which is hereunto attached and made a part of this affidavit, was published in said newspaper for 2, issues(s), to wit:

Saturday, November 15, 2014
Saturday, November 22, 2014

That the full amount of the fee charged for the publication of the attached public notice is due to the sole benefit of the publisher or publishers; that no agreement or understanding for the division thereof has been made with any other person, and that no part thereof has been agreed to be paid to any person whomever, that the fees charged for the publication thereof are: $119.30

Signed: [Signature]

Subscribed and sworn to before me this 25th day of November, 2014.
