

The prison population is below the 2012 projection without the PSIA.

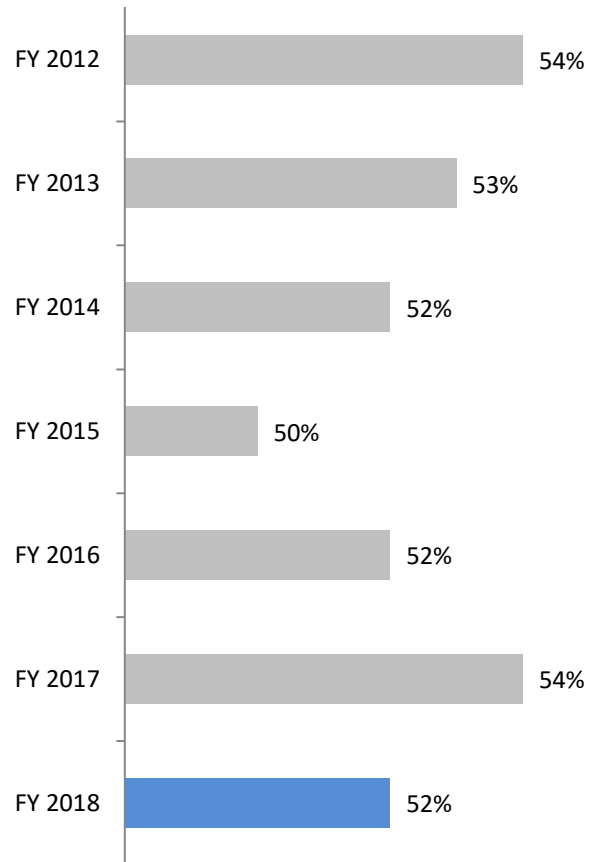

While the prison population is above the 2012 performance goal, it is still 281 inmates below what the prison population would have been

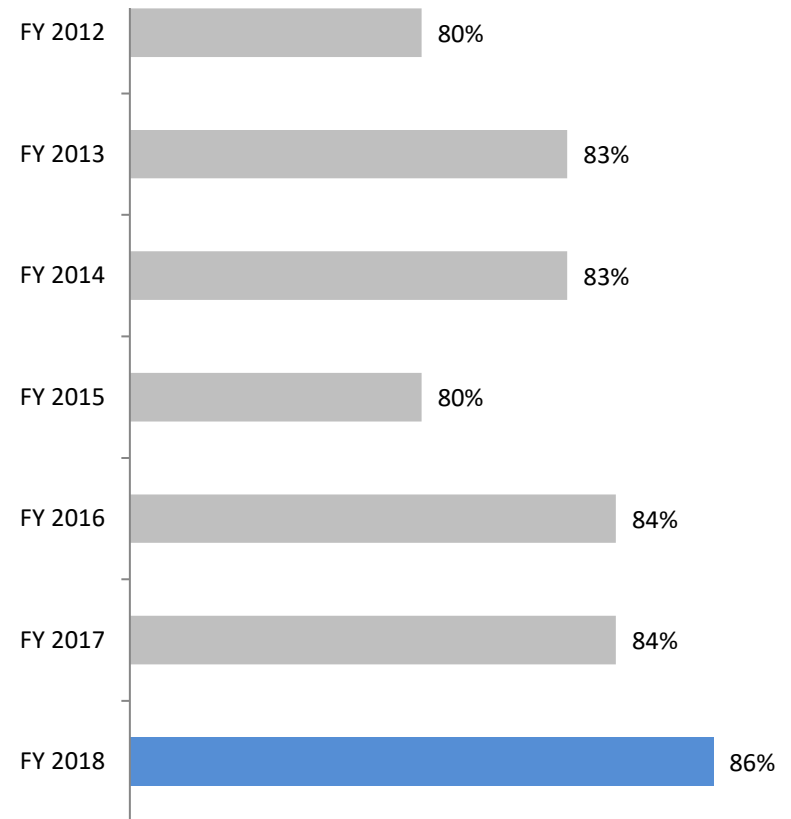

*As of 6/30/18 there were 147 parole detainees, 77 in Extended Confinement, and 135 parolees in the Community Transition Program (CTP) included in the 4,001 count.

Nonviolent offenders take up an increasing percentage of prison beds.

The percentage of **male** inmates serving time for a nonviolent crime has reduced by 2 percentage points.

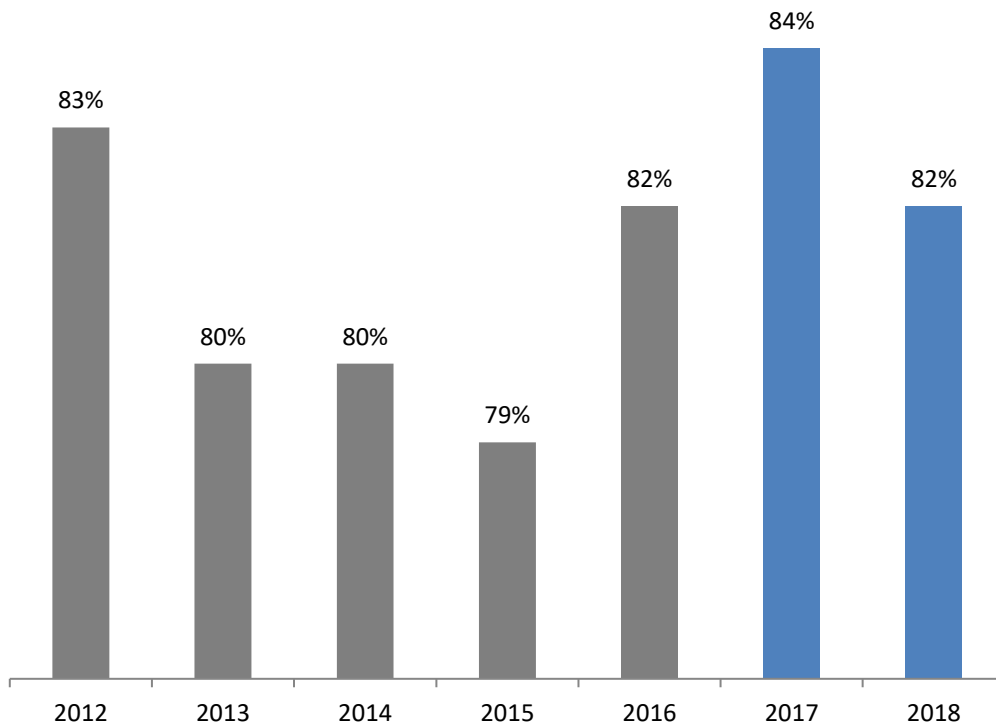

The percentage of **female** inmates serving time for a nonviolent crime has increased by 2 percentage points.

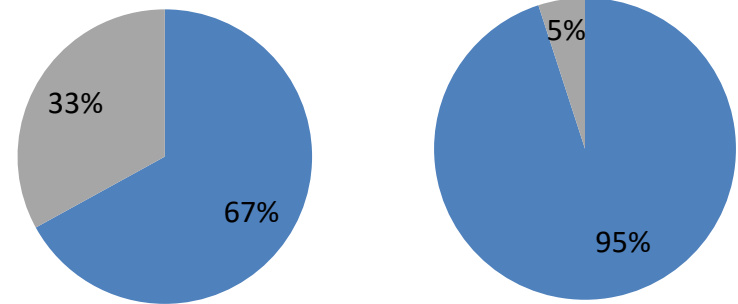

The majority of new court commitments are nonviolent.

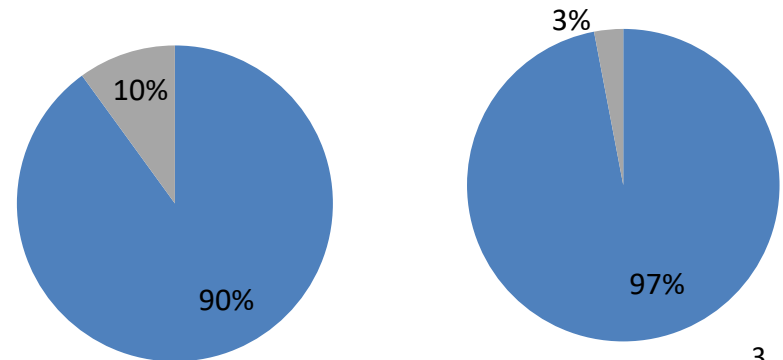

The percentage of **court commitments for nonviolent crimes** has decreased slightly from FY17.

For **FY18**, **67 percent** of male new commits were for nonviolent crimes, and **95 percent** of female new commits were for nonviolent crimes.

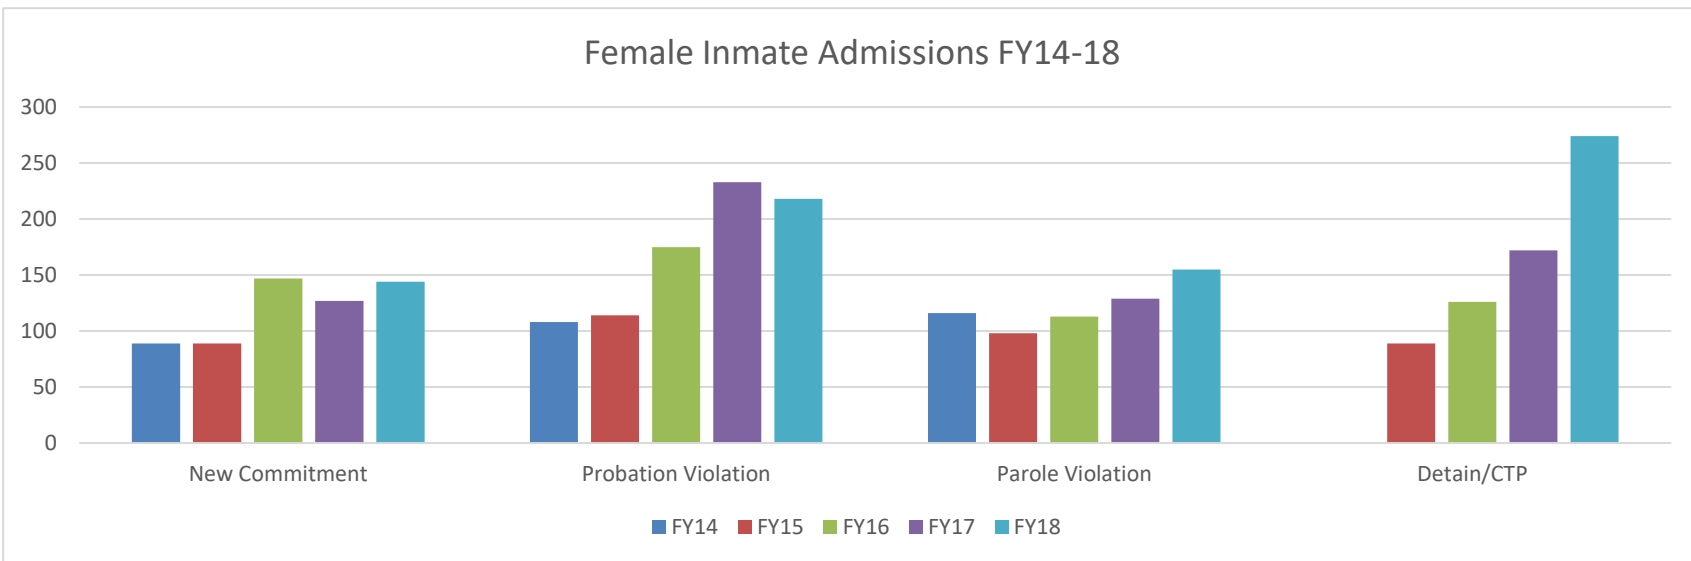

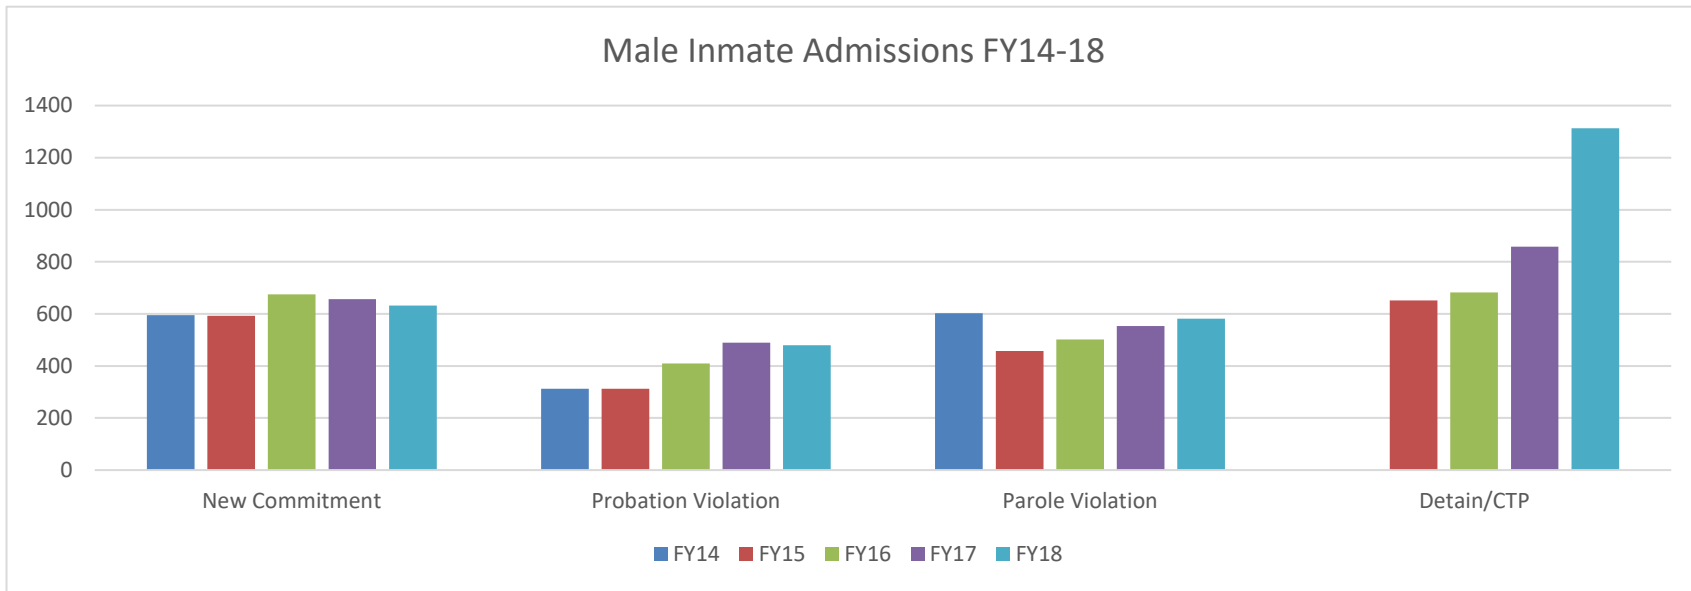

Only **10 percent** of male probation violator admits were serving for a violent crime, and only **3 percent** of female probation violator admits were serving for a violent crime in FY 18.

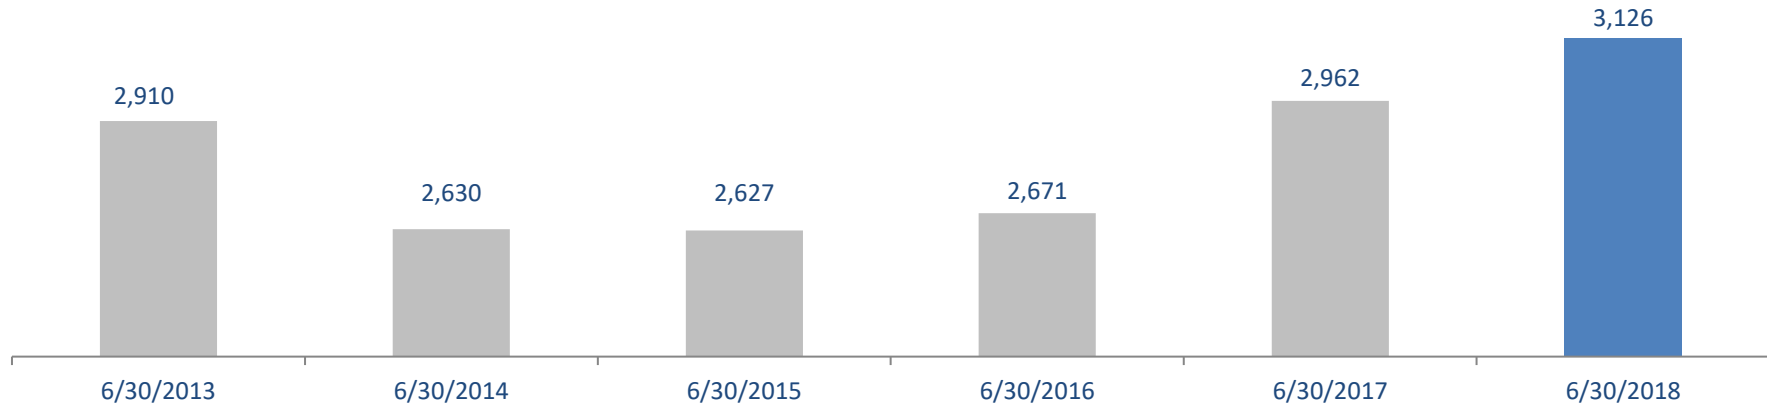

**This chart is based on court commitments, which is both probation violations and new commits. The number of probation violation admits was 423 in FY 14, 426 in FY 15, 584 in FY 16, 722 in FY17, and 698 in FY18.*

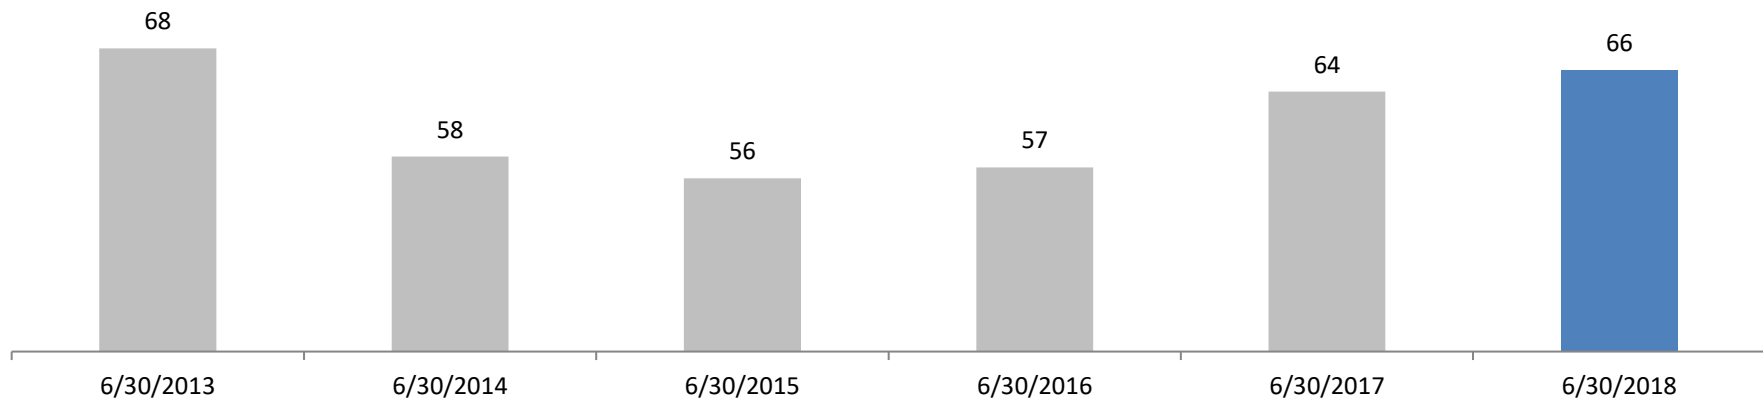

Detainments and CTP had the most significant impact on prison admissions.

The end of the year standing parole population increased 5.5%.

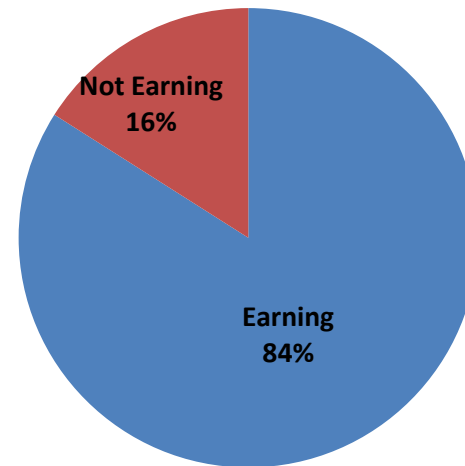

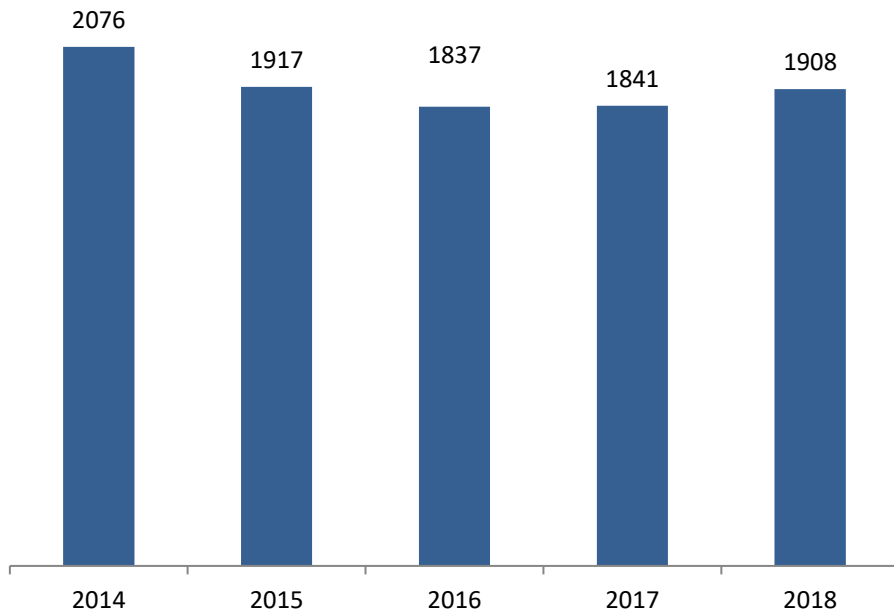

The average agent caseload is increasing but still below pre-PSIA.

Since the passage of the PSIA, parole has discharged a total 9,579 years of unnecessary supervision through earned discharge credits.

Over 84 percent of eligible parolees earned discharge credits through compliant supervision in FY18.

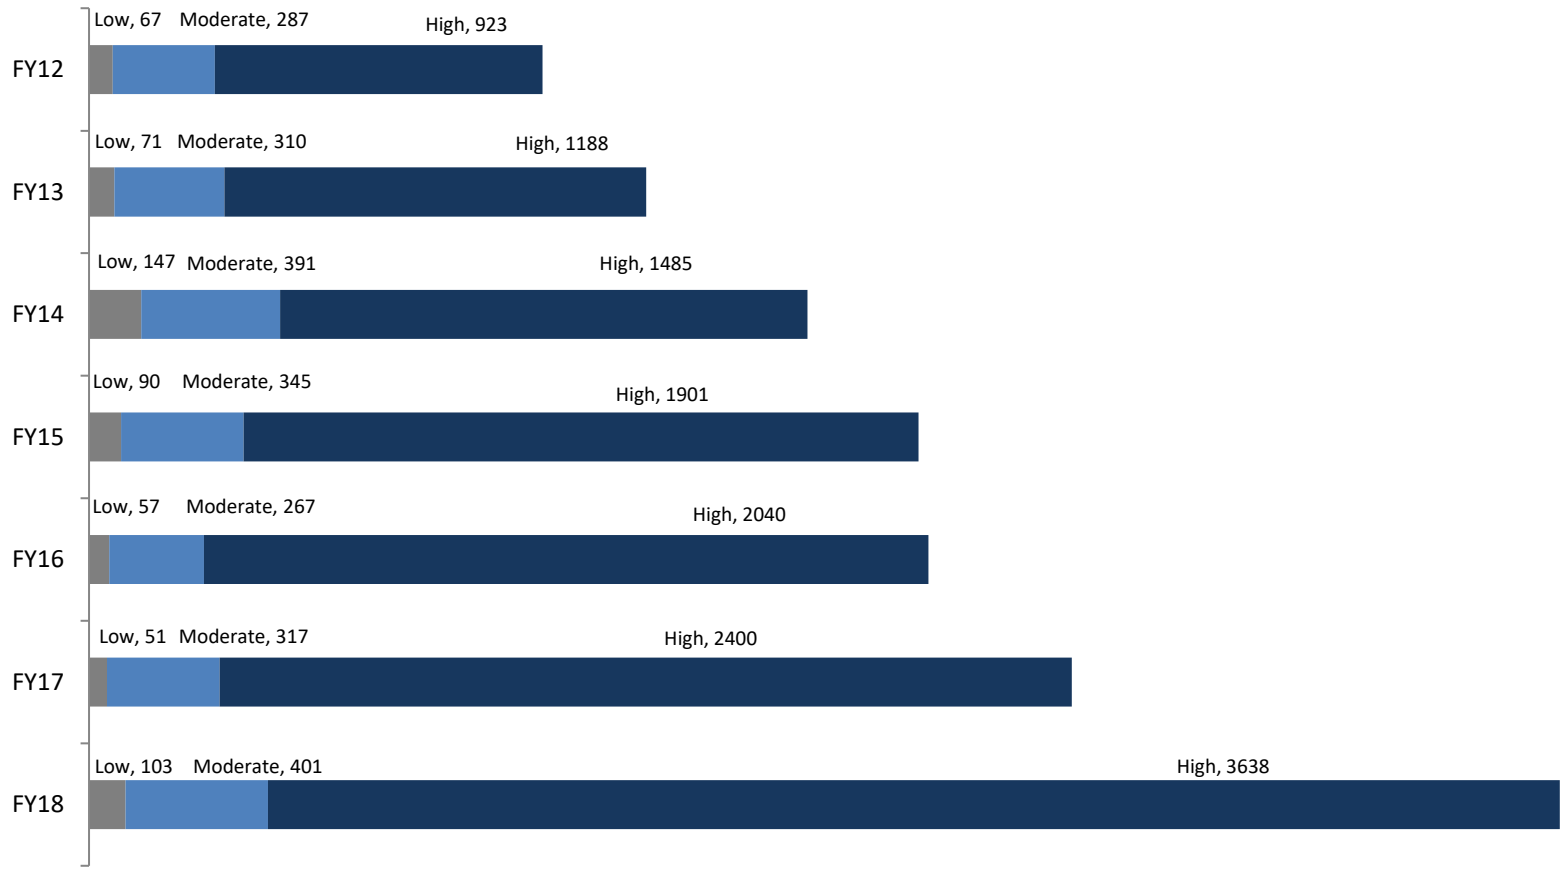

Discharge Amounts in Years

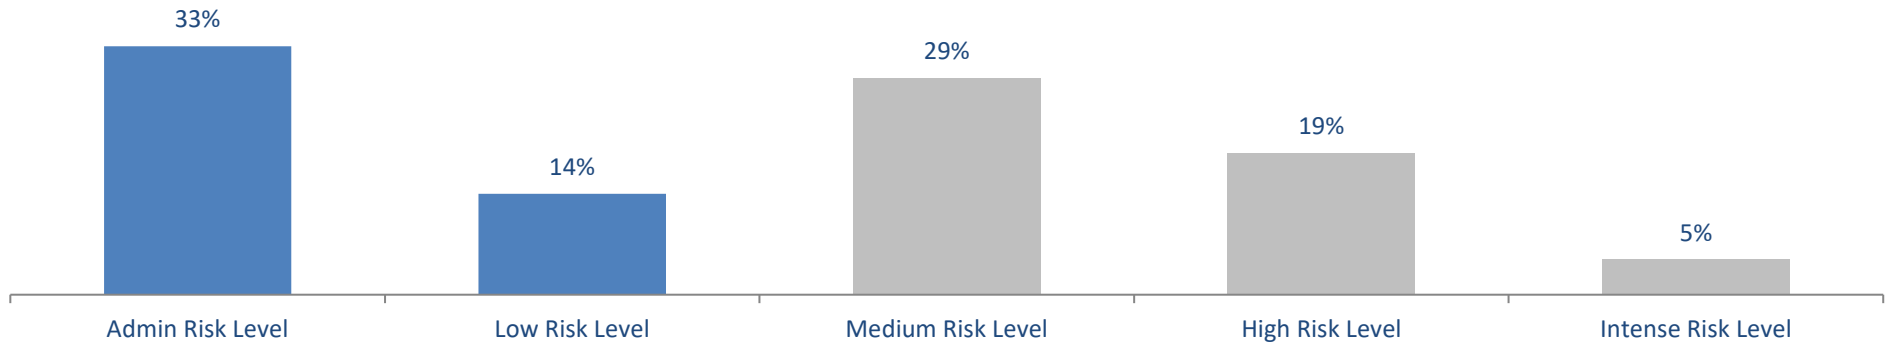

Parole Caseload Breakdown: Intensive - 13%, Max - 27%, Medium - 32%, Minimum - 8%, Indirect - 19%.

All sanctions increased but high-level sanctions increased 52% from FY17 to FY18.

Examples of a high level sanction include jail, house arrest, and treatment.

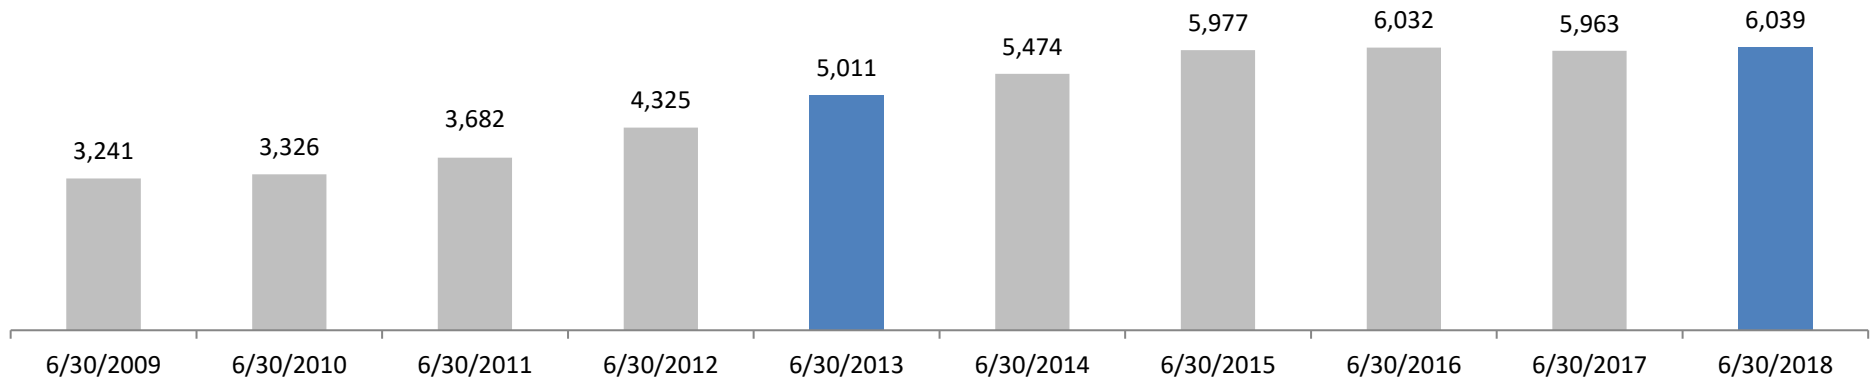

47 percent of the probation population is identified as being an administrative or low risk offender.

Felony probation supervision in the community increased 19 percent since FY 2013.

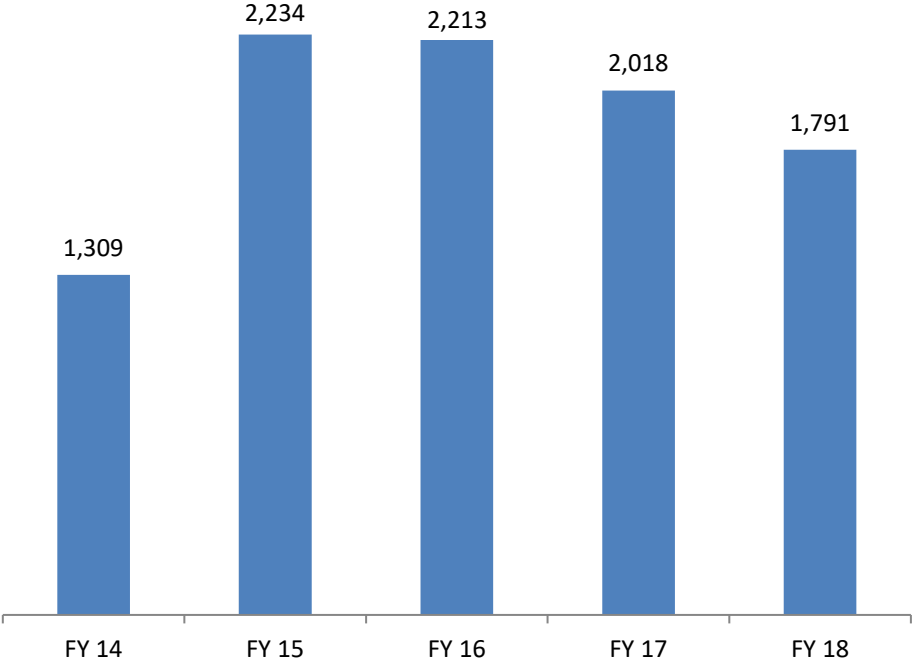

More of South Dakota's local nonviolent residents were held accountable in their own communities through increased use of drug and DUI courts, Hope probation, and evidence-based supervision.

PSIA became effective July 1, 2013.

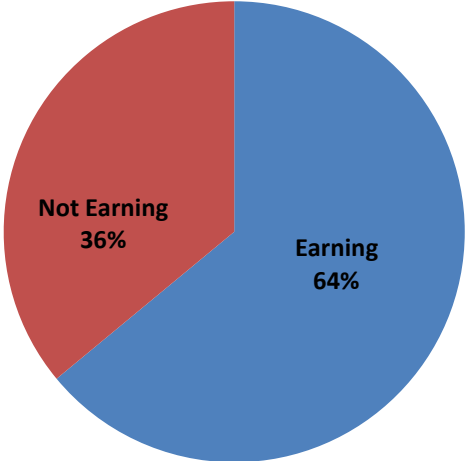

Earned Discharge Credits-Probation

7,547 years of unnecessary supervision have been discharged since FY 14 through earned discharge credits.*

Around two-thirds of eligible probationers earned discharge credits through compliant supervision.

Combined, these individuals earned a total of 653,715 days of unnecessary supervision in FY 18.

*Only 6 months were measured in FY 14.

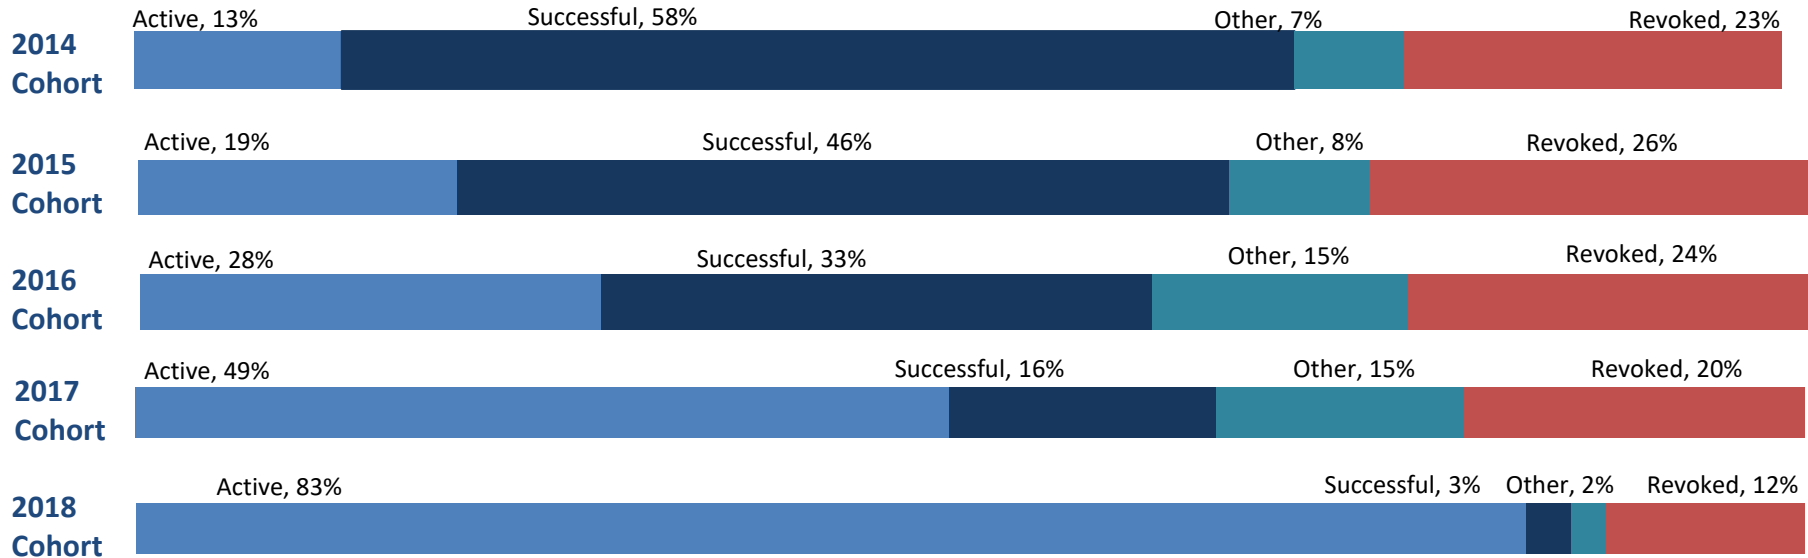

Judges deviated from presumptive probation 20% of the time in FY 18.*

74 percent of individuals eligible for presumptive probation went directly to supervision.

Presumptive probation revocations increased between FY 15 and FY 16.**

Because much of the population for subsequent years is still on probation, more data will be necessary in order to accurately compare the probation success rate.

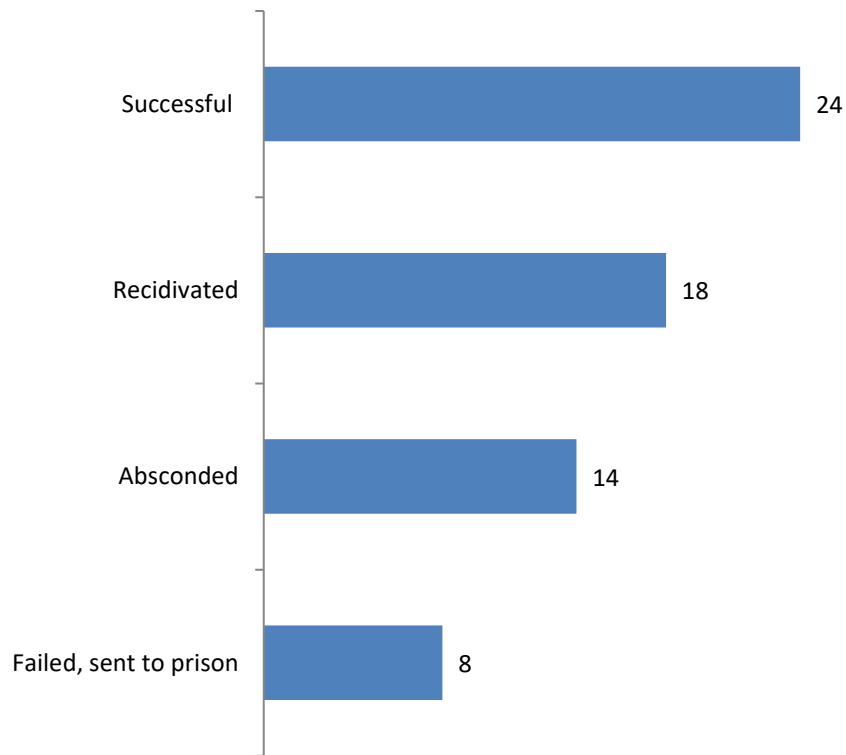

*The PSIA created a presumptive probation sentence for nonviolent class 5 and class 6 felonies. Courts may overcome the sentence despite the presumption. The deviation rate was projected to be 20%.

**Information in this graph is based on cohort and is likely to change as individuals finish probation.

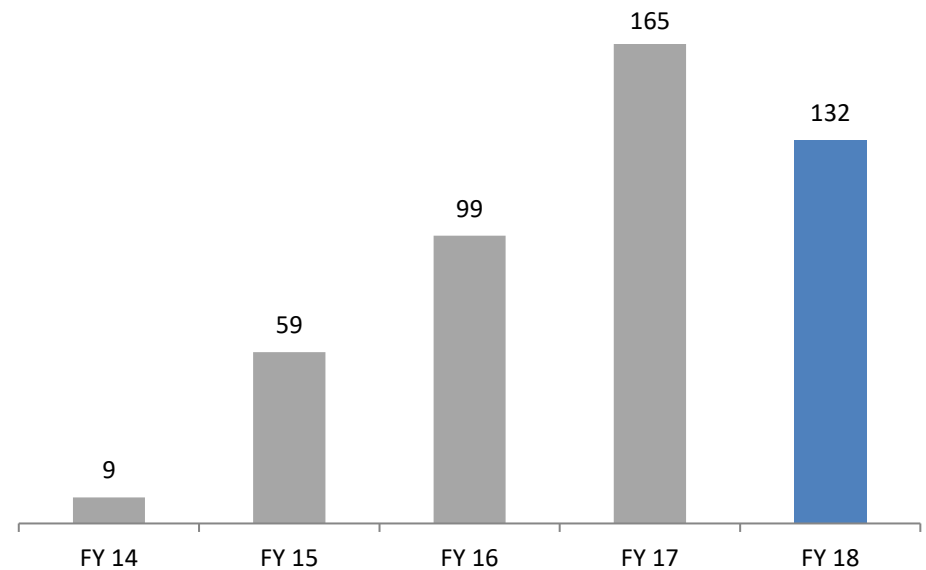

In FY 17 21 individuals successfully completed HOPE probation.

With the majority of the individuals still in the program, the final successful completion rate cannot be calculated at this time.

The number of participants in the HOPE Probation program has grown since FY 2014.

Currently, HOPE Probation is available in the First, Fifth, and Sixth circuit. People have been held accountable on probation in the community, rather than prison, with frequent and random urinalysis testing, and probation supervision.

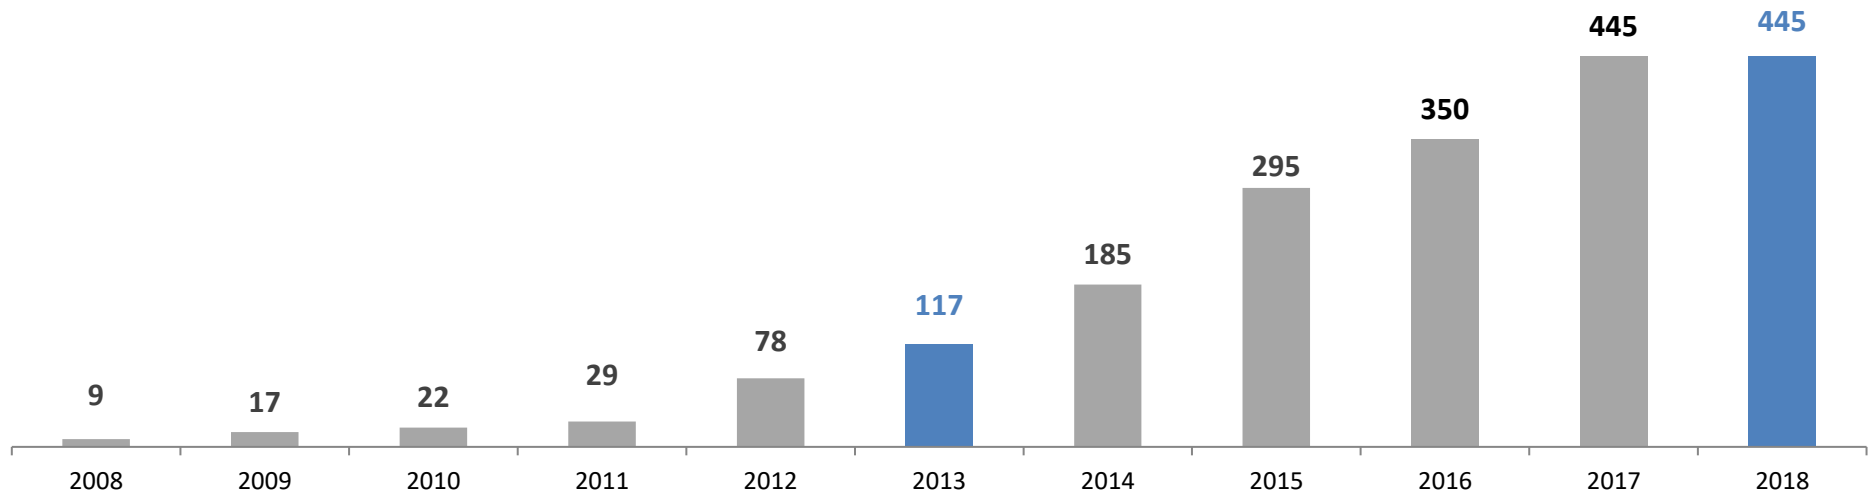

17 percent of individuals who were active in Drug or DUI court in FY18 graduated, while 22 percent graduated.

Since over 60 percent of the individuals from FY18 are still active in the program, the completion rates will change.

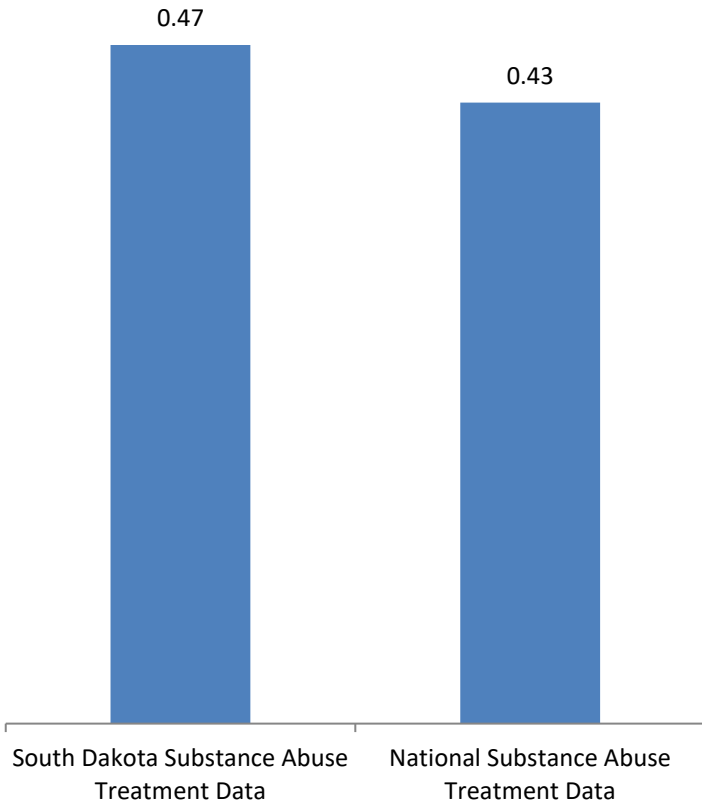

The Drug and DUI Courts' capacity has increased since the passage of the PSIA.

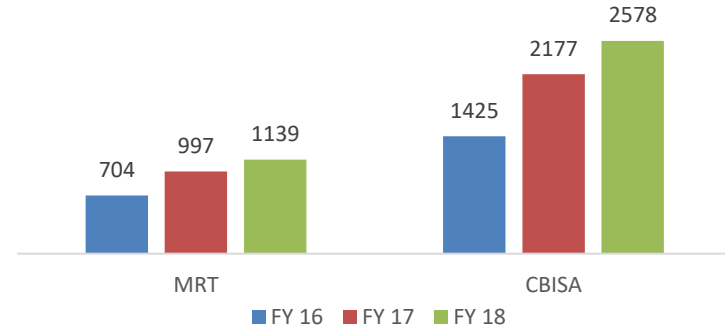

Substance Abuse

South Dakota's completion rates for substance abuse treatment (CBISA) are higher than the national average.

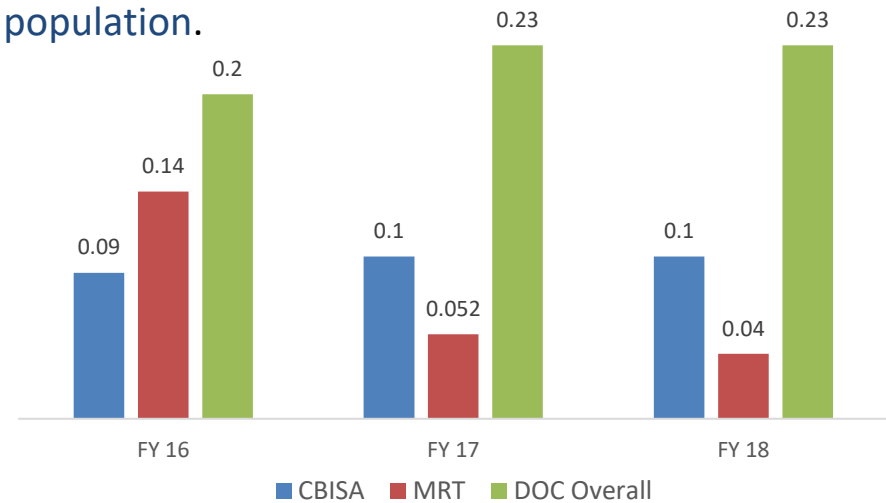

47 percent of individuals who participated in South Dakota's substance abuse treatment successfully completed the program, compared to the national average of **43 percent**.

MRT services had a 42 percent increase in clients served, while CBISA had a 18 percent

South Dakota's Substance Abuse Treatment (CBISA) and Criminal Thinking (MRT) completers have a **lower recidivism rate** than the overall DOC population.

National Substance Abuse Treatment Data consists of all individuals who received substance abuse treatment which includes criminal justice and non-criminal justice involved clients. This does not include Criminal Thinking Treatment Data.

National Data Source: SAMHSA. (2017). Treatment Episode Data. *Treatment Episode Data System (TEDS)*
