

South Dakota Railroad Board Meeting

*AGP Soybean processing plant in Aberdeen SD

50-55 full time employees

Plant will process approximately 50 million bushels/year

Plant has 4 million bushels of storage on site

*Britton Grain Terminal

Beginning potential of 25 cars/week

Will make BGT more competitive on pricing because of reduced transportation costs

*Impact of soybeans by rail cars VS trucks

Approximately 4 trucks/hopper car, which means a 25 car train will remove 100 trucks from the Highway system. It is 60 miles from Britton to Aberdeen so there would be 12,000 less truck miles on the roads/week. Also, railroads don't have to worry about road restrictions in the spring.

*Rail project

4073' of 136lb rail from mainline to southern portion of the plant. Total cost of the project is \$1,808,831.26
