This may not be the right format for this meeting but as an avid out-of-state upland hunter it is critical that the State of South Dakota rethink the pre-season brood count of pheasants. This is very important information for out-of-state hunters deciding where to hunt each year. I emphasize that the count even in down years does not influence our decision to come to South Dakota. We have been coming each year for 21 years. We will come regardless of the pheasant outlook but we will refine where we hunt based on the information. Our hunt revolves around Sept. 1 of each year when we can read how the pheasants did over the year and their nesting success. Please reinstate the annual brood count program!!!
